RADVISION's ProLab(TM) 3G-324M Test Solution is Adopted by NTT DoCoMo

Tuesday April 10, 4:05 pm ET

ProLab 3G-324M Supports Connectivity Verification and Analysis for 3G Handset Video Applications

TEL AVIV, Israel--(BUSINESS WIRE)--RADVISION (Nasdaq: RVSN - News), a leading provider of video network infrastructure and developer tools for unified visual communications over IP, 3G, and emerging next-generation IMS networks, today announced that its ProLab 3G-324M Test Solution was purchased by NTT DoCoMo.

NTT DoCoMo commented that the decision to purchase the ProLab 3G-324M Test Solution was based on its rich feature set. These features include the simulation of 3G-324M signaling and media, the monitoring of H.223, H.245 and media. In addition, the ProLab 3G-324M Test Solution supports IMTC and GCF test case scenarios.

Adi Paz, Senior Director of Product Management and Marketing for the ProLab family of testing solutions for RADVISION's Technology Business Unit, said: "The fact that ProLab was bought by an operator of NTT DoCoMo's stature is an honor for RADVISION. The ProLab 3G-324M testing solution was also certified by GCF and PTCRB. RADVISION will add more features to the ProLab family of testing and analysis solutions, not only for 3G-324M, but also for NGN (Next Generation Networks) for customers to easily execute high level tests in a shorter period."

RADVISION's ProLab 3G-324M Test Solution supports the following features:

- o Intuitive operation and easy to use
- o Multi-protocol support, such as SIP, H.323, 3G-324M and NGN
- o Multimedia support for H.263, H.264 and MPEG-4 in addition to voice codecs
- o Support for WNSRP fast video setup and Annex K of H.324 Recommendation, or the Media Oriented Negotiation Acceleration

Edgar Filing: RADVISION LTD - Form 6-K

Procedure (MONA). MONA is a group of complementary techniques designed to significantly reduce delay in H.324 call setup time. These include Accelerated Connect Procedure (ACP) and Media Preconfigured Channels (MPC).

- o Interceptor feature which monitors the signaling and media between two 3G handsets without affecting them
- o Network trouble simulation and video quality analyzer
- o Automatic test case execution and automatic test result evaluation
- o Support for XML/SOAP to run with customer's existing testing environment

The ProLab 3G-324M Test Solution is deployed by 3G vendors and mobile operators throughout the world.

RADVISION(R) Technology Delivers IPTV Set Top Box Solutions

Tuesday April 17, 7:00 am ET

New Intel Media Processor Offers Advanced Videophone Capabilities Powered by RADVISION Technology

TEL AVIV, Israel--(BUSINESS WIRE)--RADVISION (Nasdaq: RVSN - News), a leading provider of video network infrastructure and developer tools for unified visual communications over IP, 3G, and emerging next-generation networks, today announced that the company's Multimedia Terminal Framework and Advanced RTP Toolkit is bringing new IP video-based communications capabilities to the Set Top Box (STB) when coupled with the new Intel(R) ICE 2110 Media Processor.

"We are excited to be working with RADVISION to bring video-based personal communications to the Set Top Box," said William O. Leszinske, Jr., General Manager of Intel's Consumer Electronics Group. "Consumers have more choices than ever before with new services, such as video phone and video conferencing. Intel's new media processor enables the delivery of these services to the home while providing headroom for future services."

RADVISION's Multimedia Terminal Framework allows application developers to focus on application development, hardware integration and user interaction rather than complex VoIP standards when developing IP Set Top Boxes, as well as other Customer Premise Equipment (CPE) devices, such as wireline and wireless terminals, IADs, and mobile handsets. This enables faster time-to-market. The framework is a complete solution; encompassing signaling, call control and media management.

RADVISION is developing the entire videoconferencing application for Intel's media processing platform, integrating third party audio and video codecs with the platform's peripherals, and developing a reference application for OEMs. This is enabling rapid development and short time-to-market, while maintaining high flexibility and extensibility.

"At RADVISION we believe that the IP STB will soon be the epicenter of communications in the home," added Zeev Bikowsky, General Manager of RADVISION's Technology Business Unit. "IP-based videoconferencing technology opens the door to an unlimited number of new, compelling value-added services for the digital home, based on strong networked media platforms like Intel's. RADVISION's ability to offer a complete solution will help operators build these services."
