*Press Release*

**Furnace stoppage in France**

Rio de Janeiro, September 04 2008 Companhia Vale do Rio Doce (Vale) informs that the operations at its French subsidiary Rio Doce Manganèse Europe (RDME) were interrupted due to a metal leakage in the electrical furnace. As a consequence, production is expected to be interrupted for a period of six months resuming operations by February 2009. The company estimates that this shutdown will result in a drop in ferroalloy production of 45,000 metric tons. RDME has operated at 60% of its installed capacity since an accident in August 2007. Vale is reverting its best efforts to use its total production capacity to minimize the impact on deliveries to customers.

This press release may include declarations that present Vale's expectations in relation to future events or results. All declarations, when based upon future expectations and not on historical facts involve various risks and uncertainties. Vale cannot guarantee that such declarations will come to be correct. These risks and uncertainties include factors related to the following: (a) countries where we operate, mainly Brazil and Canada; (b) global economy; (c) capital markets; (d) iron ore and nickel businesses and their dependence upon the global steel industry, which is cyclical by nature; (e) high degree of global competition in the markets which Vale operates. To obtain further information on factors that may give origin to results different from those forecasted by Vale, please consult the reports filed with the Brazilian Securities and Exchange Commission (CVM), the Autorité des Marchés Financiers (AMF), and with the U.S. Securities and Exchange Commission (SEC), including the most recent Annual Report Vale Form 20F and 6K forms.
