UNITED STATES SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549
FORM 10-Q

þ **QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

For the quarterly period ended July 3, 2009

OR

o **TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

Commission file number: 001-31650

MINDSPEED TECHNOLOGIES, INC.
(Exact name of registrant as specified in its charter)

Delaware	**01-0616769**
(State of incorporation)	(I.R.S. Employer Identification No.)

4000 MacArthur Boulevard, East Tower Newport Beach, California	**92660-3095**
(Address of principal executive offices)	(Zip code)

Registrant s telephone number, including area code:
(949) 579-3000

Indicate by check mark whether the Registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes þ No o

Indicate by check mark whether the Registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes o No o

Indicate by check mark whether the Registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer and smaller reporting company in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer o	Accelerated filer þ	Non-accelerated filer o (Do not check if a smaller reporting company)	Smaller reporting company þ

Indicate by check mark whether the Registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes o No þ

The number of outstanding shares of the Registrant s Common Stock as of July 31, 2009 was 24,011,251.

FORWARD-LOOKING STATEMENTS

This Quarterly Report on Form 10-Q contains statements relating to Mindspeed Technologies, Inc. (including certain projections and business trends) that are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended (the Securities Act), and Section 21E of the Securities Exchange Act of 1934, as amended (the Exchange Act), and are subject to the safe harbor created by those sections. All statements included in this Quarterly Report on Form 10-Q, other than those that are purely historical, are forward-looking statements. Words such as expect, believe, anticipate, outlook, could, target, project, intend, plan, seek, estimate, and continue, as well as variations of such words and similar expressions, also identify forward-looking statements. Forward-looking statements in this Quarterly Report on Form 10-Q include, without limitation, statements regarding:

- the ability of our relationships with network infrastructure original equipment manufacturers to facilitate early adoption of our products, enhance our ability to obtain design wins and encourage adoption of our technology in the industry;
- the growth prospects for the network infrastructure equipment and communications semiconductors markets, including increased demand for network capacity, the upgrade and expansion of legacy networks, and the build-out of networks in developing countries;
- our plans to make substantial investments in research and development and participate in the formulation of industry standards;
- our belief that we can maximize our return on our research and development spending by focusing our investment in what we believe are key high-growth markets;
- our ability to achieve design wins and convert design wins into revenue;
- the continuation of intense price and product competition, and the resulting declining average selling prices for our products;
- the impact of changes in customer purchasing activities, inventory levels and inventory management practices;
- the importance of attracting and retaining highly skilled, dedicated personnel;
- the challenges of shifting any operations or labor offshore, including the likelihood of competition in offshore markets for qualified personnel;
- our ability to achieve revenue growth, regain and sustain profitability and positive cash flows from operations;
- our plans to reduce operating expenses, the amount and timing of any such expense reductions, and its effects on cash flow;
- our anticipation that we will not pay a dividend in the foreseeable future;
- the dependence of our operating results on our ability to develop and introduce new products and enhancements to existing products on a timely basis;
- the continuation of a trend toward industry consolidation and the effect it could have on our operating results;
- our belief that we are benefiting from the increased deployment of internet protocol-based networks both in new network buildouts worldwide and the replacement of circuit-switched networks;

the sufficiency of our existing sources of liquidity and expected sources of cash to repay the remaining $10.5 million in senior convertible debt and fund our operations, research and development efforts, anticipated capital expenditures, working capital and other financing requirements for the next 12 months;
the circumstances under which we may need to seek additional financing, our ability to obtain any such financing and any consideration of acquisition opportunities;
our expectation that our provision for income taxes for fiscal 2009 will principally consist of income taxes related to our foreign operations;
our expectations with respect to our recognition of income tax benefits in the future;
our restructuring plans, including timing, expected workforce reductions, the closure of the Dubai facility, the expected cost savings under our restructuring plans and the uses of those savings, the timing and amount of payments to complete the actions, the source of funds for such payments, the impact on our liquidity and the resulting decreases in our research and development and selling, general and administrative expenses, and the amounts of future charges to complete our restructuring plans;
our beliefs regarding the effect of the disposition of pending or asserted legal matters and the possibility of future legal matters;
our acquisition strategy, the means of financing such a strategy, and the impact of any past or future acquisitions, including the impact on revenue, margin and profitability;
our plans relating to our use of stock-based compensation, the effectiveness of our incentive compensation programs and the expected amounts of stock-based compensation expense in future periods;
our belief that the financial stability of suppliers is an important consideration in our customers purchasing decisions;
the effects of a downturn in the semiconductor industry and the general economy at large, including the impact of slower economic activity, an increase in bankruptcy filings, concerns about inflation and deflation, increased energy costs, decreased consumer confidence, reduced corporate profits and capital spending, adverse business conditions and liquidity concerns in the wired and wireless communications markets, recent international conflicts and terrorist and military activity and the impact of natural disasters and public health emergencies on our revenue and results of operation;
the impact of reductions, delays and cancellation of orders from key customers given our dependence on a relatively small number of end customers and distributors for a significant portion of our revenue and our lack of long term purchase commitments;
the impact of volatility in the stock market on the market price of our common stock;
the impact on our business if we fail to comply with the minimum listing requirements for continued quotation on the Nasdaq Global Market;
the effect of changes in the amount of research coverage of our common stock, changes in earnings estimates or buy/sell recommendations by analysts and changes in investor perception of us and the industry in which we operate;
the effect of shifts in our product mix and the effect of maturing products;
the continued availability and costs of products from our suppliers;
the value of our intellectual property, and our ability to continue recognizing patent-related revenues from the sale or licensing of our intellectual property and our plans to pursue our current intellectual property strategy;

- market demand for our new and existing products and our ability to increase our revenues;
- our intentions with respect to inventories that were previously written down and the effects on future demand and market conditions on inventory write-downs;
- our beliefs regarding the end-markets for sales of products to original equipment manufacturers and third-party manufacturing service providers in the Asia-Pacific region;
- our intention to continue to expand our international business activities, including expansion of design and operations centers abroad;
- our expectations regarding fluctuations in our growth patterns;
- competition and the principal competitive factors for semiconductor suppliers, including time to market, product quality, reliability and performance, customer support, price and total system cost, new product innovation and compliance with industry standards; and
- the impact of recent accounting pronouncements and the adoption of new accounting standards.

Our expectations, beliefs, anticipations, objectives, intentions, plans and strategies regarding the future are not guarantees of future performance and are subject to risks and uncertainties that could cause actual results, and actual events that occur, to differ materially from results contemplated by the forward-looking statement. These risks and uncertainties include, but are not limited to:

- cash requirements and terms and availability of financing;
- future operating losses;
- worldwide political and economic uncertainties and specific conditions in the markets we address;
- fluctuations in the price of our common stock and our operating results;
- loss of or diminished demand from one or more key customers or distributors;
- our ability to utilize our net operating loss carryforwards and certain other tax attributes;
- our ability to attract and retain qualified personnel;
- constraints in the supply of wafers and other product components from our third-party manufacturers;
- doing business internationally;
- pricing pressures and other competitive factors;
- successful development and introduction of new products;
- our ability to successfully and cost effectively establish and manage operations in foreign jurisdictions;
- industry consolidation;
- order and shipment uncertainty;
- our ability to obtain design wins and develop revenues from them;
- lengthy sales cycles;

- the expense of and our ability to defend our intellectual property against infringement claims by others;
- product defects and bugs; and
- business acquisitions and investments.

The forward-looking statements in this report are subject to additional risks and uncertainties, including those set forth in Part II, Item 1A under the heading Risk Factors and those detailed from time to time in our other filings with the SEC. These forward-looking statements are made only as of the date hereof and, except as required by law, we undertake no obligation to update or revise any of them, whether as a result of new information, future events or otherwise.

MINDSPEED TECHNOLOGIES, INC.
NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS
(unaudited)

1. Basis of Presentation and Significant Accounting Policies

Mindspeed Technologies, Inc. (Mindspeed or the Company) designs, develops and sells semiconductor networking solutions for communications applications in enterprise, broadband access, metropolitan and wide-area networks. On June 27, 2003, Conexant Systems, Inc. (Conexant) completed the distribution (the Distribution) to Conexant stockholders of all outstanding shares of common stock of its wholly owned subsidiary, Mindspeed. In the Distribution, each Conexant stockholder received one fifth of one share of Mindspeed common stock (including an associated preferred share purchase right) for every three shares of Conexant common stock held and cash for any fractional share of Mindspeed common stock. Following the Distribution, Mindspeed began operations as an independent, publicly held company.

Prior to the Distribution, Conexant transferred to Mindspeed the assets and liabilities of the Mindspeed business, including the stock of certain subsidiaries, and certain other assets and liabilities which were allocated to Mindspeed under the Distribution Agreement entered into between Conexant and Mindspeed. Also prior to the Distribution, Conexant contributed to Mindspeed cash in an amount such that at the time of the Distribution Mindspeed s cash balance was $100 million. Mindspeed issued to Conexant a warrant to purchase six million shares of Mindspeed common stock at a price of $17.04 per share, exercisable for a period beginning one year and ending ten years after the Distribution. In connection with the Distribution, Mindspeed and Conexant also entered into a Credit Agreement (terminated December 2004), an Employee Matters Agreement, a Tax Allocation Agreement, a Transition Services Agreement and a Sublease.

Basis of Presentation The consolidated condensed financial statements, prepared in accordance with accounting principles generally accepted in the United States of America, include the accounts of Mindspeed and each of its subsidiaries. All accounts and transactions among Mindspeed and its subsidiaries have been eliminated in consolidation. In the opinion of management, the accompanying consolidated condensed financial statements contain all adjustments, consisting of adjustments of a normal recurring nature and the special charges (Note 8), necessary to present fairly the Company s financial position, results of operations and cash flows in accordance with generally accepted accounting principles in the United States of America. The results of operations for interim periods are not necessarily indicative of the results that may be expected for a full year. These financial statements should be read in conjunction with the consolidated financial statements and notes thereto included in the Company s Annual Report on Form 10-K for the fiscal year ended October 3, 2008. We have evaluated the impact of subsequent events on these interim consolidated financial statements through August 10, 2009.

Reverse Stock Split In May 2008, the Company s Board of Directors approved a one-for-five reverse stock split following approval by the Company s stockholders on April 7, 2008. The reverse stock split was effected June 30, 2008. All share and per share amounts have been retroactively adjusted to reflect the reverse stock split. There was no net effect on total stockholders equity as a result of the reverse stock split.

Liquidity In order to regain and sustain profitability and positive cash flows from operations, the Company may need to further reduce operating expenses and/or maintain increased revenues. During the first nine months of fiscal 2009, the Company initiated a series of cost reduction actions designed to improve its operating cost structure. These expense reductions alone may not allow the Company to return to the profitability it achieved in the fourth quarter of fiscal 2008. The Company s ability to achieve the necessary revenue growth to return to profitability will depend on increased demand for network infrastructure equipment that incorporates its products, which in turn depends primarily on the level of capital spending by communications service providers and enterprises the level of which may decrease due to general economic conditions, and uncertainty, over which the Company has no control. The Company may not be successful in achieving the necessary revenue growth or it may be unable to sustain past and future expense reductions in subsequent periods. The Company may not be able to regain or sustain profitability.

The Company believes that its existing sources of liquidity, along with cash expected to be generated from product sales and the sale or licensing of intellectual property, will be sufficient to fund its operations, research and development efforts, anticipated capital expenditures, working capital and other financing requirements for at least the next 12 months, including the repayment of the remaining $10.5 million aggregate principal amount of senior convertible debt due in November 2009. From time to time, the Company may acquire its debt securities through privately negotiated transactions, tender offers, exchange offers (for new debt or other securities), redemptions or otherwise, upon such terms and at such prices as the Company may determine appropriate. The Company will need to continue a focused program of capital expenditures to meet its research and development and corporate requirements. The Company may also consider acquisition opportunities to extend its technology portfolio and design expertise and to expand its product offerings. In order to fund capital expenditures, increase its working capital or complete any acquisitions, the Company may seek to obtain additional debt or equity financing. The Company may also need to seek to obtain additional debt or equity financing if it experiences downturns or cyclical fluctuations in its business that are more severe or longer than anticipated or if it fails to achieve anticipated revenue and expense levels. However, the Company cannot assure you that such financing will be available on favorable terms, or at all, particularly in light of recent economic conditions in the capital markets.

Goodwill Goodwill is recorded when the purchase price paid for an acquisition exceeds the estimated fair value of the net identified tangible and intangible assets acquired. The Company performs a two-step process on an annual basis, or more frequently if necessary, to determine 1) whether the fair value of the relevant reporting unit exceeds carrying value, and 2) to measure the amount of an impairment loss, if any. See Note 8 for a discussion of the impairment of goodwill recorded by the Company during the nine months ended July 3, 2009.

Intangible Assets, Net Intangible assets, net, consist of backlog and developed technology and are amortized on a straight-line basis over estimated useful lives of three months to five years. See Note 7 for a discussion of the impairment of certain intangible assets recorded by the Company during the nine months ended July 3, 2009.

Impairment of Long-Lived Assets The Company continually monitors events or changes in circumstances that could indicate that the carrying amount of long-lived assets to be held and used, including intangible assets, may not be recoverable. The determination of recoverability is based on an estimate of undiscounted future cash flows resulting from the use of the asset and its eventual disposition. See Notes 7 and 8 for a discussion of the impairment of certain long-lived assets recorded by the Company during the nine months ended July 3, 2009. Other than the impairments discussed in Notes 7 and 8, no further impairments were identified by the Company.

Fiscal Periods The Company s interim fiscal quarters end on the thirteenth Friday of each quarter. The third quarter of fiscal 2009 and 2008 ended on July 3, 2009 and June 27, 2008, respectively.

Recent Accounting Standards In September 2006, the Financial Accounting Standards Board (FASB) issued Statement of Financial Accounting Standards (SFAS) No. 157, Fair Value Measurements. SFAS No. 157 provides enhanced guidance for using fair value to measure assets and liabilities. The standard also responds to investors requests for expanded information about the extent to which companies measure assets and liabilities at fair value, the information used to measure fair value and the effect of fair value measurements on earnings. SFAS No. 157 applies whenever other standards require or permit assets or liabilities to be measured at fair value. This standard does not expand the use of fair value in any new circumstances. SFAS No. 157 is effective for fiscal years beginning after November 15, 2007. In February 2008, the FASB issued FASB Staff Position (FSP) No. 157-2, Effective Date of FASB Statement No. 157, which defers the effective date of SFAS No. 157 for one year for non-financial assets and liabilities, except for items that are recognized or disclosed at fair value in an entity s financial statements on a recurring basis (at least annually). In October 2008, the FASB issued FSP No. 157-3, Determining the Fair Value of a Financial Asset When the Market for That Asset Is Not Active, which clarifies the application of SFAS No. 157 in a market that is not active. On October 4, 2008, the Company adopted the provisions of SFAS No. 157 for financial assets and liabilities recognized or disclosed at fair value on a recurring and non-recurring basis and the provisions of FSP No. 157-3. Consistent with the provisions of FSP No. 157-2, the Company elected to defer the adoption of SFAS No. 157 for non-financial assets and liabilities measured at fair value on a non-recurring basis until October 3, 2009. The Company is in the process of evaluating these portions of the standard and therefore has not yet determined the impact that the adoption will have on its consolidated financial statements.

In February 2007, the FASB issued SFAS No. 159, The Fair Value Option for Financial Assets and Financial Liabilities. SFAS No. 159 provides companies with an option to report selected financial assets and liabilities at fair value. The standard s objective is to reduce both complexity in accounting for financial instruments and the volatility in earnings caused by measuring related assets and liabilities differently. The standard requires companies to provide additional information that will help investors and other users of financial statements to more easily understand the effect of a company s choice to use fair value on its earnings. It also requires a company to display the fair value of those assets and liabilities for which the company has chosen to use fair value on the face of the balance sheet. The new standard does not eliminate disclosure requirements included in other accounting standards, including requirements for disclosures about fair value measurements included in SFAS No. 157, Fair Value Measurements, and SFAS No. 107, Disclosures about Fair Value of Financial Instruments. On October 4, 2008 the Company adopted SFAS No. 159 but did not elect the fair value option for any additional financial assets or liabilities that it held at that date.

In June 2007, the FASB ratified Emerging Issues Task Force consensus on EITF Issue No. 07-3, Accounting for Non-refundable Advanced Payments for Goods or Services to be Used in Future Research and Development Activities. EITF Issue No. 07-3 requires that these payments be deferred and capitalized and expensed as goods are delivered or as the related services are performed. On October 4, 2008 the Company adopted EITF 07-3. The adoption did not have a material impact on the Company s financial condition or results of operations.

In April 2009, the FASB issued three related Staff Positions: (i) FSP 157-4, Determining Fair Value When the Volume and Level of Activity for the Asset or Liability have Significantly Decreased and Identifying Transactions That Are Not Orderly, or FSP 157-4, (ii) SFAS 115-2 and SFAS 124-2, Recognition and Presentation of Other-Than-Temporary Impairments, or FSP 115-2 and FSP 124-2, and (iii) SFAS 107-1 and APB 28-1, Interim Disclosures about Fair Value of Financial Instruments, or FSP 107 and APB 28-1, which will be effective for interim and annual periods ending after June 15, 2009. FSP 157-4 provides guidance on how to determine the fair value of assets and liabilities under SFAS 157 in the current economic environment and reemphasizes that the objective of a fair value measurement remains an exit price. If the Company were to conclude that there has been a significant decrease in the volume and level of activity of the asset or liability in relation to normal market activities, quoted market values may not be representative of fair value and it may conclude that a change in valuation technique or the use of multiple valuation techniques may be appropriate. FSP 115-2 and FSP 124-2 modify the requirements for recognizing other-than-temporarily impaired debt securities and revise the existing impairment model for such securities, by modifying the current intent and ability indicator in determining whether a debt security is other-than-temporarily impaired. FSP 107 and APB 28-1 enhance the disclosure of instruments under the scope of SFAS 157 for both interim and annual periods. The adoption of these FSPs did not have a material impact on the Company s unaudited consolidated condensed financial statements.

In April 2009, the FASB issued FSP No. 141R-1, Accounting for Assets Acquired and Liabilities Assumed in a Business Combination That Arise from Contingencies, or FSP 141R-1. FSP 141R-1 amends the provisions in Statement 141R for the initial recognition and measurement, subsequent measurement and accounting, and disclosures for assets and liabilities arising from contingencies in business combinations. The FSP eliminates the distinction between contractual and non-contractual contingencies, including the initial recognition and measurement criteria in Statement 141R and instead carries forward most of the provisions in SFAS 141 for acquired contingencies. FSP 141R-1 is effective for contingent assets and contingent liabilities acquired in business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 15, 2008, or the Company s first quarter of fiscal 2010. The nature and magnitude of any impact of this FSP 141R-1 on the Company s consolidated financial statements will depend upon the nature, term and size of any acquired contingencies.

In May 2009, the FASB issued SFAS 165, Subsequent Events, which defined the period after the balance sheet date during which a reporting entity shall evaluate events or transactions that may occur for potential recognition or disclosure in the financial statements and the circumstances under which a company shall recognize events or transactions occurring after the balance sheet date in its financial statements. This standard also requires a company to disclose the date through which subsequent events have been evaluated for recognition or disclosure in the financial statements. The Company has reflected the recognition and disclosure requirements of this standard in this Quarterly

Report on Form 10-Q.
In June 2009, the FASB issued SFAS No. 168, The FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles a replacement of FASB Statement No. 162 (SFAS No. 168). SFAS No. 168 stipulates that the FASB Accounting Standards Codification is the source of authoritative U.S. GAAP recognized by the FASB to be applied by nongovernmental entities. SFAS No. 168 is effective for financial statements issued for interim and annual periods ending after September 15, 2009. The implementation of this standard will not have a material impact on the Company s consolidated financial position and results of operations.

Income Taxes The provision for income taxes for the nine months ended July 3, 2009 and June 27, 2008 principally consists of income taxes incurred by the Company s foreign subsidiaries. In the first nine months of fiscal 2009, there has been no change in the balance of unrecognized tax benefits. The Company does not expect that the unrecognized tax benefit will change significantly within the next 12 months.

Concentrations Financial instruments that potentially subject the Company to a concentration of credit risk consist principally of cash and cash equivalents and trade accounts receivable. Cash and cash equivalents consist of demand deposits and money market funds maintained with several financial institutions. Deposits held with banks may exceed the amount of insurance provided on such deposits. Generally, these deposits may be redeemed upon demand and are maintained with high credit quality financial institutions and therefore have minimal credit risk. The Company s trade accounts receivable primarily are derived from sales to manufacturers of network infrastructure equipment and electronic component distributors. Management believes that credit risks on trade accounts receivable are moderated by the diversity of its end customers and geographic sales areas. The Company performs ongoing credit evaluations of its customers financial condition and requires collateral, such as letters of credit and bank guarantees, whenever deemed necessary.

The following direct customers accounted for 10% or more of net revenues in the periods presented:

	Three months ended		Nine months ended	
	July 3, 2009	June 27, 2008	July 3, 2009	June 27, 2008
Customer A	10%	11%	15%	12%
Customer B	18%	10%	14%	7%
Customer C	14%	20%	13%	17%
Customer D	19%	10%	12%	6%

The following direct customers accounted for 10% or more of total accounts receivable at each period end:

	July 3, 2009	Oct. 3, 2008
Customer A	15%	9%
Customer B	32%	7%
Customer D	15%	3%
Customer E	12%	11%
Customer F	2%	20%

Supplemental Cash Flow Information Interest paid for the nine months ended July 3, 2009 and June 27, 2008 was $1.2 million and $1.7 million, respectively. Income taxes paid, net of refunds received, for the nine months ended July 3, 2009 and June 27, 2008 were $0.5 million and $56,000, respectively. Non-cash investing activities in the first nine months of fiscal 2009 consisted of the purchase of $0.1 million of property and equipment from suppliers on account as well as the license of $1.4 million of intellectual property on account. Non-cash investing activities in the first nine months fiscal 2008 consisted of the purchase of $0.8 million of property and equipment from suppliers on account. Assets acquired consists of amounts paid and received during the first nine months of fiscal 2008 on cash, accounts receivable, accounts payable and accrued liabilities created through the acquisition of certain assets of Ample Communications, Inc. (Ample Communications), which occurred in the fourth quarter of fiscal 2007.

Table of Contents

2. Supplemental Financial Statement Data

Inventories

Inventories consist of the following (in thousands):

	July 3, 2009	October 3, 2008
Work-in-process	$ 3,861	$ 8,620
Finished goods	7,663	7,567
Total inventories	$ 11,524	$ 16,187

The Company assesses the recoverability of inventories through an ongoing review of inventory levels in relation to sales backlog and forecasts, product marketing plans and product life cycles. When the inventory on hand exceeds the foreseeable demand, the value of inventory that at the time of the review is not expected to be sold is written down. The amount of the write-down is the excess of historical cost over estimated realizable value (generally zero). Once established, these write-downs are considered permanent adjustments to the cost basis of the excess inventory.

The assessment of the recoverability of inventories, and the amounts of any write-downs, are based on currently available information and assumptions about future demand (generally over twelve months) and market conditions. Demand for the Company s products may fluctuate significantly over time, and actual demand and market conditions may be more or less favorable than those projected by management. In the event that actual demand is lower than originally projected, additional inventory write-downs may be required. In the nine months ended July 3, 2009, the Company recorded a $1.1 million write-down of Carrier Ethernet inventory, related to the Ample Communications assets the Company acquired, due to a decrease in demand for these products.

The Company may retain and make available for sale some or all of the inventories which have been written down. In the event that actual demand is higher than originally projected, the Company may be able to sell a portion of these inventories in the future. The Company generally scraps inventories which have been written down and are identified as obsolete.

During the nine months ended July 3, 2009 and June 27, 2008, the Company sold inventories with an original cost of approximately $1.3 million and $1.1 million, respectively, that had been written down to a zero cost basis during fiscal 2001.

Intangible Assets and Goodwill

In conjunction with the acquisition of certain assets of Ample Communications on September 25, 2007, the Company acquired certain intangible assets. These intangible assets consist of backlog (approximately $0.1 million), developed technology (approximately $3.1 million) and goodwill (approximately $2.4 million). See Notes 7 and 8 for a discussion of the impairment of developed technology and goodwill recorded by the Company during the nine months ended July 3, 2009.

Deferred Income on Shipments to Distributors

Deferred income on shipments to distributors is as follows (in thousands):

	July 3, 2009	October 3, 2008
Deferred revenue on shipments to distributors	$ 3,149	$ 5,387
Deferred cost of inventory on shipments to distributors	(345)	(576)
Reserves	35	58
Deferred income on sales to distributors	$ 2,839	$ 4,869

14

Comprehensive Loss

Comprehensive loss is as follows (in thousands):

	Three months ended		Nine months ended	
	July 3, 2009	June 27, 2008	July 3, 2009	June 27, 2008
Net loss	$ (2,933)	$ (1,083)	$ (21,052)	$ (3,749)
Foreign currency translation adjustments	331	22	(303)	708
Comprehensive loss	$ (2,602)	$ (1,061)	$ (21,355)	$ (3,041)

The balance of accumulated other comprehensive loss at July 3, 2009 and October 3, 2008 consists of accumulated foreign currency translation adjustments.

Revenues by Category

Revenues by category are as follows (in thousands):

	Three months ended		Nine months ended	
	July 3, 2009	June 27, 2008	July 3, 2009	June 27, 2008
Revenues by product line				
Multiservice access DSP products	$ 13,642	$ 13,748	$ 35,212	$ 33,205
High-performance analog products	9,998	10,921	28,679	31,649
WAN communications products	8,905	13,380	22,918	40,394
Total net product revenues	32,545	38,049	86,809	105,248
Intellectual property			5,000	4,350
Total net revenues	$ 32,545	$ 38,049	$ 91,809	$ 109,598

Revenues by Geographic Area

Revenues by geographic area, based upon country of destination, are as follows (in thousands):

	Three months ended		Nine months ended	
	July 3, 2009	June 27, 2008	July 3, 2009	June 27, 2008
Americas	$ 6,989	$ 8,795	$ 28,042	$ 34,883
Asia-Pacific	23,192	24,891	54,389	60,728
Europe, Middle East and Africa	2,364	4,363	9,378	13,987
Total net revenues	$ 32,545	$ 38,049	$ 91,809	$ 109,598

The Company believes a substantial portion of the products sold to original equipment manufacturers (OEMs) and third-party manufacturing service providers in the Asia-Pacific region are ultimately shipped to end-markets in the Americas and Europe.

3. Fair Value Measurements

As discussed in Note 1, Recent Accounting Standards, on October 4, 2008, we adopted SFAS No. 157, Fair Value Measurements, for financial assets and financial liabilities and for non-financial assets and non-financial liabilities that we recognize or disclose at fair value on a recurring basis (at least annually). As of the date of adoption, these included cash equivalents and convertible senior notes. Consistent with the provisions of FSP No. 157-2, we elected to

defer the provisions of SFAS No. 157 that relate to non-financial assets and non-financial liabilities that we do not recognize or disclose at fair value on a recurring basis.

SFAS No. 157 defines fair value as the price that would be received from the sale of an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. SFAS No. 157 establishes a three-level hierarchy for disclosure that is based on the extent and level of judgment used to estimate the fair value of assets and liabilities.

Level 1 uses unadjusted quoted prices that are available in active markets for identical assets or liabilities. The Company s Level 1 assets include investments in money market funds.

Level 2 uses inputs other than quoted prices included in Level 1 that are either directly or indirectly observable through correlation with market data. These include quoted prices for similar assets or liabilities in active markets; quoted prices for identical or similar assets or liabilities in markets that are not active; and inputs to valuation models or other pricing methodologies that do not require significant judgment because the inputs used in the model, such as interest rates and volatility, can be corroborated by readily observable market data. The Company s Level 2 liabilities include convertible senior notes.

Level 3 uses one or more significant inputs that are unobservable and supported by little or no market activity, and reflect the use of significant management judgment. Level 3 assets and liabilities include those whose fair value measurements are determined using pricing models, discounted cash flow methodologies or similar valuation techniques and significant management judgment or estimation. The Company does not have any assets or liabilities that are valued using inputs identified under a Level 3 hierarchy.

The following table represents financial assets that we measured at fair value on a recurring basis. We have classified these assets and liabilities in accordance with the fair value hierarchy set forth in SFAS No. 157 (in thousands):

July 3, 2009	Quoted Prices in Active Markets for Identical Instruments (Level 1)	Significant Other Observable Inputs (Level 2)	Total Fair Value as of July 3, 2009
Assets:			
Cash equivalents	$ 11,871		$ 11,871
Liabilities:			
Senior convertible debt		$ 24,795	$ 24,795

October 3, 2008	Quoted Prices in Active Markets for Identical Instruments (Level 1)	Significant Other Observable Inputs (Level 2)	Total Fair Value as of July 3, 2009
Assets:			
Cash equivalents	$ 43,033		$ 43,033
Liabilities:			
Senior convertible debt		$ 41,161	$ 41,161

The following table sets forth the carrying amount and estimated fair values of financial assets and liabilities (in thousands).

	July 3, 2009	October 3, 2008

	Carrying Amount	Fair Value	Carrying Amount	Fair Value
Assets:				
Cash equivalents	$ 11,871	$ 11,871	$ 43,033	$ 43,033
Liabilities:				
Senior convertible debt	$ 25,459	$ 24,795	$ 46,000	$ 41,161

4. Stock-Based Compensation

The Company accounts for stock-based compensation under the provisions of Statement of Financial Accounting Standards No. 123 (revised 2004), Share-Based Payment (SFAS 123R). SFAS 123R requires that the Company account for all stock-based compensation using a fair-value method and recognize the fair value of each award as an expense over the service period.

Stock-based compensation awards generally vest over time and require continued service to the Company and, in some cases, require the achievement of specified performance conditions. The amount of compensation expense recognized is based upon the number of awards that are ultimately expected to vest. The Company estimates forfeiture rates of 10% to 12.5% depending on the characteristics of the award.

As a result of the Company s operating losses and its expectation of future operating results, no income tax benefits have been recognized for any U.S. federal and state operating losses-including those related to stock-based compensation expense. The Company does not expect to recognize any income tax benefits relating to future operating losses until it determines that such tax benefits are more likely than not to be realized.

Table of Contents

The fair value of stock options awarded during the nine months ended July 3, 2009 and June 27, 2008 was estimated at the date of grant using the Black-Scholes option-pricing model. The following table summarizes the weighted-average assumptions used and the resulting fair value of options granted:

	Nine months ended	
	July 3, 2009	**June 27, 2008**
Weighted-average fair value of options granted	$ 1.07	$ 2.15
Weighted-average assumptions:		
Expected option life	2.8 years	3.3 years
Risk-free interest rate	1.4%	2.6%
Expected volatility	87%	65%
Dividend yield		

The expected option term was estimated based upon historical experience and management s expectation of exercise behavior. The expected volatility of the Company s stock price is based upon the historical daily changes in the price of the Company s common stock. The risk-free interest rate is based upon the current yield on U.S. Treasury securities having a term similar to the expected option term. Dividend yield is estimated at zero because the Company does not anticipate paying dividends in the foreseeable future.

Stock-based compensation expense related to employee stock options and restricted stock under SFAS 123R was allocated as follows (in thousands):

	Three months ended		Nine months ended	
	July 3, 2009	**June 27, 2008**	**July 3, 2009**	**June 27, 2008**
Cost of goods sold	$ 18	$ 43	$ 67	$ 121
Research and development	211	450	651	1,762
Selling, general and administrative	473	603	1,478	2,240
Total stock-based compensation expense	$ 702	$ 1,096	$ 2,196	$ 4,123

Stock Compensation Plans

The Company has two principal stock incentive plans: the 2003 Long-Term Incentives Plan and the Directors Stock Plan. The 2003 Long-Term Incentives Plan provides for the grant of stock options, restricted stock, restricted stock units and other stock-based awards to officers and employees of the Company. The Directors Stock Plan provides for the grant of stock options, restricted stock units and other stock-based awards to the Company s non-employee directors. As of July 3, 2009, an aggregate of 2.1 million shares of the Company s common stock were available for issuance under these plans. On March 10, 2009, the stockholders of the Company approved plan amendments that included an increase in the authorized number of shares reserved for issuance under the 2003 Long-Term Incentives Plan to approximately 6.7 million shares.

The Company also has a 2003 Stock Option Plan, under which stock options were issued in connection with the Distribution. In the Distribution, each holder of a Conexant stock option (other than options held by persons in certain foreign locations) received an option to purchase a number of shares of Mindspeed common stock. The number of shares subject to, and the exercise prices of, the outstanding Conexant options and the Mindspeed options were adjusted so that the aggregate intrinsic value of the options was equal to the intrinsic value of the Conexant option immediately prior to the Distribution and the ratio of the exercise price per share to the market value per share of each option was the same immediately before and after the Distribution. As a result of such option adjustments, Mindspeed issued options to purchase an aggregate of approximately 6.0 million shares of its common stock to holders of Conexant stock options (including Mindspeed employees) under the 2003 Stock Option Plan. There are no shares

available for new stock option awards under the 2003 Stock Option Plan. However, any shares subject to the unexercised portion of any terminated, forfeited or cancelled options are available for future option grants only in connection with an offer to exchange outstanding options for new options.

Prior to February 2007, the Company maintained employee stock purchase plans for its domestic and foreign employees. Under SFAS 123R, the plans were non-compensatory and the Company has recorded no compensation expense in connection therewith. The employee stock purchase plans were terminated by the Company s board of directors effective February 28, 2007.

Stock Option Awards

Prior to fiscal 2006, stock-based compensation consisted principally of stock options. Eligible employees received grants of stock options at the time of hire; the Company also made broad-based stock option grants covering substantially all employees annually. Stock option awards have exercise prices not less than the market price of the common stock at the grant date and a contractual term of eight or ten years, and are subject to time-based vesting (generally over four years). On April 10, 2009, the Company offered current eligible employees of Mindspeed and its subsidiaries the right to exchange certain unexercised options to purchase shares of the Company s common stock. The offer period on the exchange program ended on May 15, 2009 at which time the Company exchanged 754,000 previously issued stock options for 250,000 new options with an exercise price of $1.70, the market price of the Company s common stock on that date. The Company has chosen to account for this transaction under the bifurcated approach and recorded an insignificant amount of incremental compensation expense in conjunction with this exchange.

The following table summarizes stock option activity under all plans (shares in thousands):

	Number of Shares		Weighted-Average Exercise Price	Weighted-Average Remaining Contractual Term
Outstanding at October 3, 2008	3,528	$	10.50	3.7 years
Granted	1,282	$	1.97	
Exercised		$		
Forfeited or expired	(1,639)	$	11.51	
Outstanding at July 3, 2009	3,171	$	6.53	5.2 years
Exercisable at end of period	1,358	$	11.44	2.7 years

As of July 3, 2009, there was unrecognized compensation expense of $2.0 million related to unvested stock options, which the Company expects to recognize over a weighted-average period of 1.4 years. The aggregate intrinsic value as of July 3, 2009 of options outstanding was $0.2 million and options exercisable was zero.

Restricted Stock Awards

The Company s stock incentive plans also provide for awards of shares of restricted stock and other stock-based incentive awards. Restricted stock awards have time-based vesting and/or performance conditions and are generally subject to forfeiture if employment terminates prior to the end of the service period or if the prescribed performance criteria are not met. Restricted stock awards are valued at the grant date based upon the market price of the Company s common stock and the fair value of each award is charged to expense over the service period.

The following table summarizes restricted stock award activity (shares in thousands):

	Number of Shares	Weighted-Average Grant Date Fair Value
Nonvested shares at October 3, 2008	682	$ 6.69
Granted	208	$ 1.84
Vested	(418)	$ 5.98
Forfeited	(43)	$ 6.99
Nonvested shares at July 3, 2009	429	$ 4.50

The total fair value of shares vested during the nine months ended July 3, 2009 was $0.5 million. As of July 3, 2009 there was unrecognized compensation expense of $1.0 million related to unvested restricted stock awards, which the Company expects to recognize over a weighted-average period of one year.

5. Revolving Credit Facility and Convertible Senior Notes

Revolving Credit Facility

As of July 3, 2009, the Company was in compliance with all required covenants under our revolving credit facility and had no outstanding borrowings under the revolving credit facility.

3.75% Convertible Senior Notes due 2009

In December 2004, the Company sold $46.0 million aggregate principal amount of 3.75% convertible senior notes due 2009 for net proceeds (after discounts and commissions) of approximately $43.9 million. The notes are senior unsecured obligations of the Company, ranking equal in right of payment with all future unsecured indebtedness. The notes bear interest at a rate of 3.75%, payable semiannually in arrears each May 18 and November 18.

During the first quarter of fiscal 2009, the Company repurchased $20.5 million aggregate principal amount of its 3.75% convertible senior notes due in November 2009, for cash of $17.3 million. The repurchases occurred in two separate transactions on October 16 and October 23, 2008. The related debt discount and debt issuance costs totaling $0.3 million were written off. The repurchase resulted in a gain on debt extinguishment of $2.9 million. Following the completion of the repurchase, and the exchange discussed below, $10.5 million in aggregate principal amount of the 3.75% convertible senior notes remain outstanding.

6.50% Convertible Senior Notes due 2013

On July 30, 2008, the Company entered into separate exchange agreements with certain holders of our existing 3.75% convertible senior notes due 2009, pursuant to which holders of an aggregate of $15.0 million of the existing notes agreed to exchange their notes for $15.0 million in aggregate principal amount of a new series of 6.50% convertible senior notes due 2013 (the new notes). The exchanges closed on August 1, 2008. The Company paid at the closing an aggregate of approximately $0.1 million in accrued and unpaid interest on the existing notes that were exchanged for the new notes, as well as approximately $0.9 million in transaction fees.

6. Commitments and Contingencies

Various lawsuits, claims and proceedings have been or may be instituted or asserted against Conexant or Mindspeed, including those pertaining to product liability, intellectual property, environmental, safety and health, and employment matters. In connection with the Distribution, Mindspeed assumed responsibility for all contingent liabilities and current and future litigation against Conexant or its subsidiaries to the extent such matters relate to Mindspeed.

The outcome of litigation cannot be predicted with certainty and some lawsuits, claims or proceedings may be disposed of unfavorably to the Company. Many intellectual property disputes have a risk of injunctive relief and there can be no assurance that the Company will be able to license a third party s intellectual property. Injunctive relief

could have a material adverse effect on the financial condition or results of operations of the Company. Based on its evaluation of matters which are pending or asserted, management of the Company believes the disposition of such matters will not have a material adverse effect on the financial condition or results of operations of the Company.

7. Asset Impairments and Other Charges

Included within cost of goods sold for the nine months ended July 3, 2009 are asset impairments and other charges totaling $3.7 million recorded in the second quarter of fiscal 2009. These charges include a $2.3 million write-down of the carrying value of developed technology related to the Company s acquisition of certain assets of Ample Communications in the fourth quarter of fiscal 2007. Management evaluated the recoverability of the assets related to Ample Communications to determine whether their value was impaired, based upon the future cash flows expected to be generated by the associated products over the remainder of their life cycles. Because the estimated undiscounted cash flows were less than the carrying value of the related assets, management determined that such assets were impaired. The Company recorded an impairment charge equal to the full book value of the assets by comparing the estimated fair value of the asset to their carrying value. The fair value was determined by computing the present value of the expected future cash flows using a discount rate of 20%, which management believes is commensurate with the underlying risks associated with the projected cash flows. Management believes the assumptions used in the discounted cash flow model represent a reasonable estimate of the fair value of the assets.

In addition, in the nine months ended July 3, 2009, asset impairments and other charges within cost of goods sold includes a $1.1 million write-down of Ample Communications related inventory due to a decrease in demand for these products recorded during the second quarter of fiscal 2009. The Company assesses the recoverability of its inventories at least quarterly through a review of inventory levels in relation to foreseeable demand (generally over 12 months). Foreseeable demand is based upon all available information, including sales backlog and forecasts, product marketing plans and product life cycles. When the inventory on hand exceeds the foreseeable demand, the Company writes down the value of those inventories which, at the time of its review, the Company expects to be unable to sell. The amount of the inventory write-down is the excess of historical cost over estimated realizable value (generally zero). Once established, these write-downs are considered permanent adjustments to the cost basis of the excess inventory.

Also, in the second quarter of fiscal 2009, the Company recorded other asset impairments within cost of goods sold totaling $0.3 million associated with manufacturing related property and equipment that the Company determined to abandon or scrap.

8. Special Charges

Special charges consist of the following (in thousands):

	Three months ended		Nine months ended	
	July 3, 2009	**June 27, 2008**	**July 3, 2009**	**June 27, 2008**
Asset impairments	$	$	$ 2,865	$
Restructuring charges	9	110	4,031	284
Total special charges	$ 9	$ 110	$ 6,896	$ 284

Asset Impairments

Asset impairments totaling $2.9 million were recorded during the nine months ended July 3, 2009. Included in this amount are asset impairment charges totaling $0.5 million related to software and property and equipment that the Company determined to abandon or scrap, as well as asset impairment charges totaling $2.4 million to write-down the carrying value of goodwill related to the Company s acquisition of certain assets of Ample Communications in the fourth quarter of fiscal 2007.

The Company tests goodwill for impairment annually and whenever events or circumstances make it more likely than not that an impairment may have occurred. Goodwill is tested for impairment using a two-step process. In the first step, the fair value of a reporting unit, determined at the component level, is compared to its carrying value. If the carrying value of the net assets assigned to a reporting unit exceeds the fair value of a reporting unit, the second step of the impairment test is performed in order to determine the implied fair value of a reporting unit s goodwill. If the carrying value of a reporting unit s goodwill exceeds its implied fair value, goodwill is deemed impaired and is written

down to the extent of the difference.

In the second quarter of fiscal 2009, the Company s Ample Communications reporting unit experienced a severe decline in sales and profitability due to a significant decline in demand that the Company believes was a result of the downturn in global economic conditions as well as a bankruptcy filed by the reporting unit s most significant customer. The drop in market demand resulted in significant declines in unit sales. Due to these market and economic conditions, the Company s Ample Communications reporting unit has experienced a significant decline in market value. As a result, the Company concluded that there were sufficient factual circumstances for interim impairment analyses under SFAS No. 142. Accordingly, in the second quarter of fiscal 2009, the Company performed an assessment of goodwill for impairment. Based on the results of the Company s assessment of goodwill for impairment, it was determined that the carrying value of the Ample Communications reporting unit exceeded its estimated fair value. Therefore, the Company performed a second step of the impairment test to estimate the implied fair value of goodwill. The required analysis indicated that there would be no remaining implied value attributable to goodwill in the Ample Communications reporting unit and, accordingly, the Company impaired the entire goodwill balance of $2.4 million.

In the first step of the impairment analysis, the Company performed valuation analyses utilizing both income and market approaches to determine the fair value of its reporting units. Under the income approach, the Company determined the fair value based on estimated future cash flows discounted by an estimated weighted-average cost of capital, which reflects the overall level of inherent risk of the projected cash flows and the rate of return an outside investor would expect to earn. Estimated future cash flows were based on the Company s internal projection models, industry projections and other assumptions deemed reasonable by management. Under the market-based approach, the Company derived the fair value of its Ample Communications reporting unit based on revenue multiples of comparable publicly-traded peer companies. In the second step of the impairment analysis, the Company determined the implied fair value of goodwill for the Ample Communications reporting unit by allocating the fair value of the reporting unit to all of its assets and liabilities in accordance with SFAS No. 141, Business Combinations, as if the reporting unit had been acquired in a business combination and the price paid to acquire it was the fair value.

Restructuring Charges

Mindspeed Second Quarter Fiscal 2009 Restructuring Plan In the second quarter of fiscal 2009, the Company announced the implementation of cost reduction measures with most of the savings expected to be derived from focused reductions in the areas of sales, general and administrative and wide area networking communication spending, including the closure of its Dubai facility. In the first nine months of fiscal 2009, the Company incurred special charges of $1.1 million to this restructuring primarily related to severance costs for affected employees. As of the end of the third quarter of fiscal 2009, this restructuring plan was substantially complete and the Company does not expect to incur significant additional costs related to this restructuring plan in future periods.

Activity and liability balances related to the second quarter fiscal 2009 restructuring plan through July 3, 2009 are as follows (in thousands):

	Workforce Reductions	Facility Other	Total
Charged to costs and expenses	$ 1,047	$ 87	$ 1,134
Cash payments	(839)		(839)
Non-cash charges		(87)	(87)
Restructuring balance, July 3, 2009	$ 208	$	$ 208

The remaining accrued restructuring balance principally represents employee severance benefits. The Company expects to pay these obligations over their respective terms, which expire at various dates through fiscal 2010. The Company can provide no assurances that the actual costs and timing of this plan will approximate these estimates.

M*indspeed First Quarter Fiscal 2009 Restructuring Plan* During the first quarter of fiscal 2009, the Company implemented a restructuring plan under which it reduced its workforce by approximately 6%. In connection with this reduction in workforce, in the first nine months of 2009, the Company recorded a charge of $2.4 million for severance benefits payable to the affected employees. In December 2008, the Company vacated approximately 70% of its Massachusetts facility and recorded a charge related to contractual obligations on this space of approximately $0.4 million. As of the end of the third quarter of fiscal 2009, this restructuring plan was substantially complete and the Company does not expect to incur significant additional costs related to this restructuring plan in future periods. Activity and liability balances related to the first quarter fiscal 2009 restructuring plan through July 3, 2009 are as follows (in thousands):

	Workforce Reductions	Facility and Other	Total
Charged to costs and expenses	$ 2,405	$ 368	$ 2,773
Cash payments	(1,823)	(143)	(1,966)
Non-cash charges	(3)	(92)	(95)
Restructuring balance, July 3, 2009	$ 579	$ 133	$ 712

The remaining accrued restructuring balance principally represents obligations under non-cancelable leases, employee severance benefits and other contractual commitments. The Company expects to pay these obligations over their respective terms, which expire at various dates through fiscal 2011. The Company can provide no assurances that the actual costs and timing of this plan will approximate these estimates.

Mindspeed Restructuring Plans In fiscal 2006 and 2007, the Company implemented a number of cost reduction initiatives to improve its operating cost structure. These cost reduction initiatives included workforce reductions, significant reductions in capital spending and the consolidation of certain facilities.

The remaining accrued restructuring balance under these initiatives is $0.1 million at July 3, 2009 and principally represents obligations under a non-cancelable lease and a settlement with a former employee. The Company expects to pay these obligations in the fourth quarter of fiscal 2009. Activity under these initiatives was minimal in the first nine months of fiscal 2009.

9. Related Party Transactions

The Company leases its headquarters and principal design center in Newport Beach, California from Conexant. For the nine months ended July 3, 2009 and June 27, 2008 rent and operating expenses paid to Conexant were $3.9 million and $5.1 million, respectively. At both July 3, 2009 and October 3, 2008, the Company had a liability to Conexant of $0.2 million associated with such lease.

10. Subsequent Events

On August 9, 2009, the Company adopted a stockholder rights agreement (the Rights Agreement) in an effort to help preserve the Company s ability to fully utilize its net operating loss carryforwards by reducing the likelihood of an ownership change as defined by Section 382 of the Internal Revenue Code (Section 382). An ownership change would occur if stockholders, deemed under Section 382 to own 5% or more of the Company s stock by value, increase their collective ownership of the aggregate amount of the Company s stock by more than 50 percentage points over a defined period of time. The Rights Agreement is intended to act as a deterrent to any person or group acquiring, without the approval of the Company s Board of Directors, beneficial ownership of 4.9% or more of the Company s stock. The Rights Agreement will continue in effect until August 9, 2012, unless it is terminated or redeemed earlier by the Board of Directors.

ITEM 2. MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

This information should be read in conjunction with our unaudited consolidated condensed financial statements and the notes thereto included in this Quarterly Report and our audited consolidated financial statements and notes thereto and Management s Discussion and Analysis of Financial Condition and Results of Operations contained in our Annual Report on Form 10-K for our fiscal year ended October 3, 2008.

Overview

Mindspeed Technologies, Inc. (we or Mindspeed) designs, develops and sells semiconductor networking solutions for communications applications in enterprise, broadband access, metropolitan and wide area networks. Our products, ranging from optical network transceiver solutions to voice and Internet protocol (IP) processors, are classified into three focused product families: high-performance analog products, multiservice access digital signal processor (DSP) products and wide area networking (WAN) communications products. Our products are sold to original equipment manufacturers (OEMs) for use in a variety of network infrastructure equipment, including mixed media gateways, high-speed routers, switches, access multiplexers, cross-connect systems, add-drop multiplexers, IP private branch exchanges (PBXs), optical modules and broadcast video systems. Service providers use this equipment for the processing, transmission and switching of high-speed voice, data and video traffic, including advanced services such as voice-over-IP (VoIP), within different segments of the communications network. Our customers include Alcatel-Lucent, Cisco Systems, Inc., Huawei Technologies Co. Ltd., LM Ericsson Telephone Company, Nokia Siemens Networks and Zhongxing Telecom Equipment Corp. (ZTE).

Trends and Factors Affecting Our Business

Our products are components of network infrastructure equipment. As a result, we rely on network infrastructure OEMs to select our products from among alternative offerings to be designed into their equipment. These design wins are an integral part of the long sales cycle for our products. Our customers may need six months or longer to test and evaluate our products and an additional six months or more to begin volume production of equipment that incorporates our products. We believe our close relationships with leading network infrastructure OEMs facilitate early adoption of our products during development of their products, enhance our ability to obtain design wins and encourage adoption of our technology by the industry.

We market and sell our semiconductor products directly to network infrastructure OEMs. We also sell our products indirectly through electronic component distributors and third-party electronic manufacturing service providers, who manufacture products incorporating our semiconductor networking solutions for OEMs. Sales to distributors accounted for approximately 44% of our revenues for the first nine months of fiscal 2009 and 55% of our revenues for the first nine months of fiscal 2008. Sales to customers located outside the U.S., primarily in the Asia-Pacific region and Europe, were approximately 75% of our net revenues for the first nine months of fiscal 2009 and 73% of our net revenues for the first nine months of fiscal 2008. We believe a portion of the products we sell to OEMs and third-party manufacturing service providers in the Asia-Pacific region is ultimately shipped to end markets in the Americas and Europe.

We have significant research, development, engineering and product design capabilities. Our success depends to a substantial degree upon our ability to develop and introduce in a timely fashion new products and enhancements to our existing products that meet changing customer requirements and emerging industry standards. We have made, and plan to make, substantial investments in research and development and to participate in the formulation of industry standards. We spent approximately $38.5 million on research and development in the first nine months of fiscal 2009 and $42.2 million on research and development in the first nine months of fiscal 2008. We seek to maximize our return on our research and development spending by focusing our research and development investment in what we believe are key high-growth markets, including VoIP and high-performance analog applications. We have developed and maintain a broad intellectual property portfolio, and we intend to periodically enter into strategic arrangements to leverage our portfolio by licensing or selling our intellectual property. We recognized our first revenues from the sale of patents during the fourth quarter of fiscal 2007. We anticipate continuing this intellectual property strategy in future periods.

23

We are dependent upon third parties for the manufacture, assembly and testing of our products. Our ability to bring new products to market, to fulfill orders and to achieve long-term revenue growth is dependent on our ability to obtain sufficient external manufacturing capacity, including wafer fabrication capacity. Periods of upturn in the semiconductor industry may be characterized by rapid increases in demand and a shortage of capacity for wafer fabrication and assembly and test services. In such periods, we may experience longer lead times or indeterminate delivery schedules, which may adversely affect our ability to fulfill orders for our products. During periods of capacity shortages for manufacturing, assembly and testing services, our primary foundries and other suppliers may devote their limited capacity to fulfill the requirements of other clients that are larger than we are, or who have superior contractual rights to enforce manufacture of their products, including to the exclusion of producing our products. We may also incur increased manufacturing costs, including costs of finding acceptable alternative foundries or assembly and test service providers. In order to regain and sustain profitability and positive cash flows from operations, we may need to further reduce operating expenses and/or increase our revenues.

Our ability to achieve revenue growth will depend on increased demand for network infrastructure equipment that incorporates our products, which in turn depends primarily on the level of capital spending by communications service providers the level of which may decrease due to general economic conditions, and uncertainty, over which we have no control. We believe the market for network infrastructure equipment in general, and for communications semiconductors in particular, offers attractive long-term growth prospects due to increasing demand for network capacity, the continued upgrading and expansion of existing networks and the build-out of telecommunication networks in developing countries. However, the semiconductor industry is highly cyclical and is characterized by constant and rapid technological change, rapid product obsolescence and price erosion, evolving technical standards, short product life cycles and wide fluctuations in product supply and demand. In addition, there has been an increasing trend toward industry consolidation, particularly among major network equipment and telecommunications companies. Consolidation in the industry may lead to pricing pressure and loss of market share. These factors have caused substantial fluctuations in our revenues and our results of operations in the past, and we may experience cyclical fluctuations in our business in the future.

Critical Accounting Policies and Estimates

The preparation of financial statements in accordance with generally accepted accounting principles in the U.S. requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Among the significant estimates affecting our consolidated financial statements are those relating to inventories, stock-based compensation, revenue recognition, allowances for doubtful accounts, income taxes and impairment of long-lived assets. We regularly evaluate our estimates and assumptions based upon historical experience and various other factors that we believe to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. To the extent actual results differ from those estimates, our future results of operations may be affected.

Inventories We write-down our inventory for estimated obsolete or unmarketable inventory in an amount equal to the difference between the cost of inventory and the estimated market value based upon assumptions about future demand and market conditions. If actual market conditions are less favorable than our estimates, additional inventory write-downs may be required. In the event we experience unanticipated demand and are able to sell a portion of the inventories we have previously written down, our gross margins will be favorably affected. In the three months ended April 3, 2009, the Company recorded $1.1 million write-down of Carrier Ethernet inventory, related to certain assets of Ample Communications, Inc. that we acquired, due to a decrease in demand for these products. For further information on this write-down, see Note 7 Asset Impairments and Other Charges to our consolidated financial statements.

Impairment of Long-Lived Assets We regularly monitor and review long-lived assets, including fixed assets, goodwill and intangible assets, for impairment, including whenever events or changes in circumstances indicate that the carrying amount of any such asset may not be recoverable. The determination of recoverability is based on an estimate of the undiscounted cash flows expected to result from the use of an asset and its eventual disposition. The estimate of

cash flows is based upon, among other things, certain assumptions about expected future operating performance, growth rates and other factors. Our estimates of undiscounted cash flows may differ from actual cash flows due to, among other things, technological changes, economic conditions, changes to our business model or changes in our operating performance. If the sum of the undiscounted cash flows (excluding interest) is less than the carrying value, we recognize an impairment loss, measured as the amount by which the carrying value exceeds the fair value of the asset. We recorded impairment charges on certain long-lived assets totaling $5.5 million in the second quarter of fiscal 2009. For further information on these asset impairments, see Note 7 Asset Impairments and Other Charges and Note 8 Special Charges to our consolidated financial statements.

Revenue Recognition Our products are often integrated with software that is essential to the functionality of the equipment. Additionally, we provide unspecified software upgrades and enhancements through our maintenance contracts for many of our products. Accordingly, we account for revenue in accordance with Statement of Position No. 97-2, Software Revenue Recognition, and all related interpretations. For sales of products where software is incidental to the equipment, we apply the provisions of Staff Accounting Bulletin No. 104, Revenue Recognition, and all related interpretations.

We generate revenues from direct product sales, sales to distributors, maintenance contracts, development agreements and the sale and license of intellectual property. We recognize revenues when the following fundamental criteria are met: (i) persuasive evidence of an arrangement exists; (ii) delivery has occurred; (iii) our price to the customer is fixed or determinable; and (iv) collection of the sales price is probable. In instances where final acceptance of the product, system, or solution is specified by the customer, revenue is deferred until all acceptance criteria have been met. Technical support services revenue is deferred and recognized ratably over the period during which the services are to be performed. Advanced services revenue is recognized upon delivery or completion of performance.

We recognize revenues on products shipped directly to customers at the time the products are shipped and title and risk of loss transfer to the customer, in accordance with the terms specified in the arrangement, and the four above mentioned revenue recognition criteria are met.

We recognize revenues on sales to distributors based on the rights granted to these distributors in our distribution agreements. We have certain distributors who have been granted return rights and receive credits for changes in selling prices to end customers, the magnitude of which is not known at the time products are shipped to the distributor. The return rights granted to these distributors consist of limited stock rotation rights, which allow them to rotate up to 10% of the products in their inventory twice a year, as well as certain product return rights if the applicable distribution agreement is terminated. These distributors also receive price concessions because they resell our products to end customers at various negotiated price points which vary by end customer, product, quantity, geography and competitive pricing environments. When a distributor s resale is priced at a discount from the distributor s invoice price, we credit back to the distributor a portion of the distributor s original purchase price after the resale transaction is complete. Thus, a portion of the Deferred income on sales to distributors balance will be credited back to the distributor in the future. Under these agreements, we defer recognition of revenue until the products are resold by the distributor, at which time our final net sales price is fixed and the distributor s right to return the products expires. At the time of shipment to these distributors, we: (i) record a trade receivable at the invoiced selling price because there is a legally enforceable obligation from the distributor to pay us currently for product delivered; (ii) relieve inventory for the carrying value of products shipped because legal title has passed to the distributor; and (iii) record deferred revenue and deferred cost of inventory under the Deferred income on sales to distributors caption in the liability section of our consolidated balance sheets. We evaluate the deferred cost of inventory component of this account for possible impairment by considering potential obsolescence of products that might be returned to us and by considering the potential of resale prices of these products being below our cost. By reviewing deferred inventory costs in the manners discussed above, we ensure that any portion of deferred inventory costs that are not recoverable from future contractual revenue are charged to cost of sales as an expense. Deferred income on sales to distributors effectively represents the gross margin on sales to distributors, however, the amount of gross margin we recognize in future periods may be less than the originally recorded deferred income as a result of negotiated price concessions. In recent years, such concessions have exceeded 30% of list price on average. For detail of this account balance, see Note 2 Supplemental Financial Statement Data to our consolidated financial statements.

We recognize revenues from other distributors at the time of shipment and when title and risk of loss transfer to the distributor, in accordance with the terms specified in the arrangement, and when the four above mentioned revenue recognition criteria are met. These distributors may also be given business terms to return a portion of inventory, however they do not receive credits for changes in selling prices to end customers. At the time of shipment, product prices are fixed and determinable and the amount of future returns can be reasonably estimated and accrued.

Revenue from the sale and license of intellectual property is recognized when the above mentioned four revenue recognition criteria are met. Development revenue is recognized when services are performed and customer acceptance has been received and was not significant for any of the periods presented.

Stock Based Compensation We account for stock-based compensation in accordance with SFAS No. 123R, Share-Based Payment. SFAS 123R requires that we account for all stock-based compensation transactions using a fair-value method and recognize the fair value of each award as an expense over the service period. The fair value of restricted stock awards is based upon the market price of our common stock at the grant date. We estimate the fair value of stock option awards, as of the grant date, using the Black-Scholes option-pricing model. The use of the Black-Scholes model requires that we make a number of estimates, including the expected option term, the expected volatility in the price of our common stock, the risk-free rate of interest and the dividend yield on our common stock. If our expected option term and stock-price volatility assumptions were different, the resulting determination of the fair value of stock option awards could be materially different. In addition, judgment is also required in estimating the number of share-based awards that we expect will ultimately vest upon the fulfillment of service conditions (such as time-based vesting) or the achievement of specific performance conditions. If the actual number of awards that ultimately vest differs significantly from these estimates, stock-based compensation expense and our results of operations could be materially impacted.

Deferred Income Taxes We have provided a full valuation allowance against our U.S federal and state deferred tax assets. If sufficient evidence of our ability to generate future U.S federal and/or state taxable income becomes apparent, we may be required to reduce our valuation allowance, resulting in income tax benefits in our statement of operations. We evaluate the realizability of our deferred tax assets and assess the need for a valuation allowance quarterly.

Fair Value Measurements *Adoption of SFAS 157* On October 4, 2008, we adopted Statement of Financial Accounting Standards (SFAS) No.157, *Fair Value Measurements,* for financial assets and financial liabilities and for non-financial assets and non-financial liabilities that we recognize or disclose at fair value on a recurring basis (at least annually). SFAS No. 157 defines fair value, establishes a framework for measuring fair value, and expands disclosures about fair value measurements. This statement does not require any new fair value measurements, but provides guidance on how to measure fair value by providing a fair value hierarchy used to classify the source of the information. See Note 1 and Note 3 to the consolidated financial statements for more information.

Recent Accounting Pronouncements

In September 2006, the Financial Accounting Standards Board (FASB) issued Statement of Financial Accounting Standards (SFAS) No. 157, Fair Value Measurements. SFAS No. 157 provides enhanced guidance for using fair value to measure assets and liabilities. The standard also responds to investors requests for expanded information about the extent to which companies measure assets and liabilities at fair value, the information used to measure fair value and the effect of fair value measurements on earnings. SFAS No. 157 applies whenever other standards require or permit assets or liabilities to be measured at fair value. This standard does not expand the use of fair value in any new circumstances. SFAS No. 157 is effective for fiscal years beginning after November 15, 2007. In February 2008, the FASB issued FASB Staff Position (FSP) No. 157-2, Effective Date of FASB Statement No. 157, which defers the effective date of SFAS No. 157 for one year for non-financial assets and liabilities, except for items that are recognized or disclosed at fair value in an entity s financial statements on a recurring basis (at least annually). In October 2008, the FASB issued FSP No. 157-3, Determining the Fair Value of a Financial Asset When the Market for That Asset Is Not Active, which clarifies the application of SFAS No. 157 in a market that is not active. On October 4, 2008, we adopted the provisions of SFAS No. 157 for financial assets and liabilities recognized or disclosed at fair value on a recurring and non-recurring basis and the provisions FSP No. 157-3. Consistent with the provisions of FSP No. 157-2, we elected to defer the adoption of SFAS No. 157 for non-financial assets and liabilities measured at fair value on a non-recurring basis until October 3, 2009. We are in the process of evaluating these portions of the standard and therefore have not yet determined the impact that the adoption will have on our consolidated financial statements.

26

In February 2007, the FASB issued SFAS No. 159, The Fair Value Option for Financial Assets and Financial Liabilities. SFAS No. 159 provides companies with an option to report selected financial assets and liabilities at fair value. The standard s objective is to reduce both complexity in accounting for financial instruments and the volatility in earnings caused by measuring related assets and liabilities differently. The standard requires companies to provide additional information that will help investors and other users of financial statements to more easily understand the effect of the company s choice to use fair value on its earnings. It also requires companies to display the fair value of those assets and liabilities for which the company has chosen to use fair value on the face of the balance sheet. The new standard does not eliminate disclosure requirements included in other accounting standards, including requirements for disclosures about fair value measurements included in SFAS No. 157, Fair Value Measurements, and SFAS No. 107, Disclosures about Fair Value of Financial Instruments. On October 4, 2008 we adopted SFAS No. 159 but did not elect the fair value option for any additional financial assets or liabilities that we held at that date.

In June 2007, the FASB ratified Emerging Issues Task Force consensus on EITF Issue No. 07-3, Accounting for Non-refundable Advanced Payments for Goods or Services to be Used in Future Research and Development Activities. EITF Issue No. 07-3 requires that these payments be deferred and capitalized and expensed as goods are delivered or as the related services are performed. On October 4, 2008 we adopted EITF 07-3. The adoption did not have a material impact on our financial condition or results of operations.

In April 2009, the FASB issued three related Staff Positions: (i) FSP 157-4, Determining Fair Value When the Volume and Level of Activity for the Asset or Liability have Significantly Decreased and Identifying Transactions That Are Not Orderly, or FSP 157-4, (ii) SFAS 115-2 and SFAS 124-2, Recognition and Presentation of Other-Than-Temporary Impairments, or FSP 115-2 and FSP 124-2, and (iii) SFAS 107-1 and APB 28-1, Interim Disclosures about Fair Value of Financial Instruments, or FSP 107 and APB 28-1, which will be effective for interim and annual periods ending after June 15, 2009. FSP 157-4 provides guidance on how to determine the fair value of assets and liabilities under SFAS 157 in the current economic environment and reemphasizes that the objective of a fair value measurement remains an exit price. If we were to conclude that there has been a significant decrease in the volume and level of activity of the asset or liability in relation to normal market activities, quoted market values may not be representative of fair value and we may conclude that a change in valuation technique or the use of multiple valuation techniques may be appropriate. FSP 115-2 and FSP 124-2 modify the requirements for recognizing other-than-temporarily impaired debt securities and revise the existing impairment model for such securities, by modifying the current intent and ability indicator in determining whether a debt security is other-than-temporarily impaired. FSP 107 and APB 28-1 enhance the disclosure of instruments under the scope of SFAS 157 for both interim and annual periods. The adoption of these FSPs did not have a material impact on our unaudited consolidated condensed financial statements.

In April 2009, the FASB issued FSP No. 141R-1, Accounting for Assets Acquired and Liabilities Assumed in a Business Combination That Arise from Contingencies, or FSP 141R-1. FSP 141R-1 amends the provisions in Statement 141R for the initial recognition and measurement, subsequent measurement and accounting, and disclosures for assets and liabilities arising from contingencies in business combinations. The FSP eliminates the distinction between contractual and non-contractual contingencies, including the initial recognition and measurement criteria in Statement 141R and instead carries forward most of the provisions in SFAS 141 for acquired contingencies. FSP 141R-1 is effective for contingent assets and contingent liabilities acquired in business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 15, 2008, which is our first quarter of fiscal 2010. The nature and magnitude of any impact of FSP 141R-1on our consolidated financial statements will depend upon the nature, term and size of any acquired contingencies.

In May 2009, the FASB issued SFAS 165, Subsequent Events, which defined the period after the balance sheet date during which a reporting entity shall evaluate events or transactions that may occur for potential recognition or disclosure in the financial statements and the circumstances under which a company shall recognize events or transactions occurring after the balance sheet date in its financial statements. This standard also requires a company to disclose the date through which subsequent events have been evaluated for recognition or disclosure in the financial statements. We reflected the recognition and disclosure requirements of this standard in this Quarterly Report on Form 10-Q.

In June 2009, the FASB issued SFAS No. 168, The FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles a replacement of FASB Statement No. 162 (SFAS No. 168). SFAS No. 168 stipulates that the FASB Accounting Standards Codification is the source of authoritative U.S. GAAP recognized by the FASB to be applied by nongovernmental entities. SFAS No. 168 is effective for financial statements issued for interim and annual periods ending after September 15, 2009. The implementation of this standard will not have a material impact on our consolidated financial position and results of operations.

Results of Operations

Net Revenues

The following table summarizes our net revenues:

	Three months ended			Nine months ended		
($ in millions)	**July 3, 2009**	**Change**	**June 27, 2008**	**July 3, 2009**	**Change**	**June 27, 2008**
Multiservice access DSP products	$ 13.6	(1%)	$ 13.8	$ 35.2	6%	$ 33.2
High-performance analog products	10.0	(8%)	10.9	28.7	(9%)	31.6
WAN communications products	8.9	(33%)	13.4	22.9	(43%)	40.4
Intellectual property		0%		5.0	14%	4.4
Net revenues	$ 32.5	(14%)	$ 38.1	$ 91.8	(16%)	$ 109.6

The 14% decrease in our net revenues for the third quarter of fiscal 2009 compared to the third quarter of fiscal 2008 period mainly reflects lower sales volume in all three of our product families, with the largest decrease in demand occurring in our WAN communications products. Net revenues from our multiservice access DSP products decreased $0.2 million, or 1%, mainly reflecting decreased demand at one of our large strategic North American customers partially offset by an increase in shipments for fiber-to-the building deployments, particularly in Asia. Net revenues from our high-performance analog products decreased $0.9 million, or 8%, in the third quarter of fiscal 2009 from the third quarter of fiscal 2008. This decrease is mainly driven by weak economic conditions affecting our physical media dependent (PMD) devices that are used in infrastructure equipment for fiber-to-the-premise deployments, metropolitan area networks and wide area networks. These decreases are being partially offset by increased shipments in our crosspoint switches due to strength in the telecommunications market in China. Net revenues from our WAN communications products decreased $4.5 million, or 33%, mainly reflecting a dramatic decrease in demand due to weak economic conditions, particularly in the U.S. This decrease in demand was primarily in our ATM/MPLS network processor products, our T/E carrier transmission products and our Carrier Ethernet products added to the WAN portfolio as a result of the acquisition of certain assets of Ample Communications in the fourth quarter of fiscal 2007.

For the first nine months of fiscal 2009, the 16% decrease in our revenues compared to the first nine months of fiscal 2008 reflects declines in two of our product families, with the largest decrease in demand occurring in our WAN communications products. These declines were partially offset by an increase in revenues in our multiservice access DSP products. Net revenues from our multiservice access DSP products increased $2.0 million, or 6%, mainly reflecting decreased demand at one of our large strategic North American customers more than offset by an increase in shipments for fiber-to-the building deployments, particularly in Asia. We are experiencing increased sales volumes of our VoIP product families as telecommunication service providers install equipment to transmit their voice traffic over IP data networks. We believe we are benefiting from the deployment of IP-based networks both in new network buildouts and the replacement of circuit-switched networks. Net revenues from our high-performance analog products decreased $2.9 million, or 9%, when comparing the first nine months of fiscal 2009 to the first nine months of fiscal 2008. Within high-performance analog, we are experiencing a benefit from increased demand for our crosspoint

switches, which are used in telecommunications applications. This benefit is being more than offset by weak economic conditions affecting our physical media (PMD) devices that are used in infrastructure equipment for fiber-to-the-premise deployments, metropolitan area networks and wide area networks. Net revenues from our WAN communications products decreased $17.5 million, or 43%, mainly reflecting a dramatic decrease in demand due to weak economic conditions, particularly in the U.S. This decrease in demand was primarily in our ATM/MPLS network processor products, our T/E carrier transmission products and our Carrier Ethernet products added to the WAN portfolio as a result of the acquisition of certain assets of Ample Communications in the fourth quarter of fiscal 2007.

Table of Contents

Gross Margin

($ in millions)	Three months ended July 3, 2009	Change	June 27, 2008	Nine months ended July 3, 2009	Change	June 27, 2008
Gross margin	$ 19.9	(22%)	$ 25.5	$ 54.9	(27%)	$ 74.9
Percent of net revenues	61%		67%	60%		68%

Gross margin represents revenues less cost of goods sold. As a fabless semiconductor company, we use third parties (including Taiwan Semiconductor Manufacturing Co., Ltd. (TSMC), Jazz Semiconductor, Inc., and Amkor Technology, Inc.) for wafer fabrication and assembly and test services. Our cost of goods sold consists predominantly of: purchased finished wafers; assembly and test services; royalty and other intellectual property costs; labor and overhead costs associated with product procurement; the cost of mask sets purchased; sustaining engineering expenses pertaining to products sold; and asset impairment charges, if applicable.

Our gross margin for the third quarter of fiscal 2009 decreased $5.6 million from our gross margin for the third quarter of fiscal 2008, principally reflecting a 14% decrease in product sales. The decrease in our gross margin as a percent of net revenues for the third quarter of fiscal 2009 compared to the same fiscal 2008 period is mainly due to the inventory reduction we experienced during the quarter, as well as a shift in the mix of products being sold primarily resulting from a decline in sales volume in our higher margin WAN communications products.

Our gross margin for the first nine months of fiscal 2009 decreased $20.0 million over the comparable fiscal 2008 period, principally reflecting a combination of a 18% decrease in product sales as well as asset impairment charges totaling $3.7 million taken in the second quarter of fiscal 2009. Asset impairments consist of $2.3 million related to the write-down of the carrying value of technology developed by Ample Communications, a $1.1 million write-down of Ample Communications related inventory, and a $0.3 million write-down of certain manufacturing related fixed assets. Gross margin as a percent of net revenues for the first nine months of fiscal 2009 includes an approximately 4% effect from these asset impairments. The decrease in our gross margin as a percent of net revenues for the first nine months of fiscal 2009 over the comparable fiscal 2008 period is also due to the inventory reduction we experienced during the period as well as a shift in the mix of products being sold primarily resulting from a decline in sales volume in our higher margin WAN communications products.

We assess the recoverability of our inventories at least quarterly through a review of inventory levels in relation to foreseeable demand (generally over 12 months). Foreseeable demand is based upon all available information, including sales backlog and forecasts, product marketing plans and product life cycles. When the inventory on hand exceeds the foreseeable demand, we write-down the value of those inventories which, at the time of our review, we expect to be unable to sell. The amount of the inventory write-down is the excess of historical cost over estimated realizable value (generally zero). Once established, these write-downs are considered permanent adjustments to the cost basis of the excess inventory. As discussed above, in the second fiscal 2009 quarter, we recorded a $1.1 million write-down of Ample Communications related inventory due to a decrease in demand for these products.

Our products are used by OEMs that have designed our products into network infrastructure equipment. For many of our products, we gain these design wins through a lengthy sales cycle, which often includes providing technical support to the OEM customer. In the event of the loss of business from existing OEM customers, we may be unable to secure new customers for our existing products without first achieving new design wins. When the quantities of inventory on hand exceed foreseeable demand from existing OEM customers into whose products our products have been designed, we generally will be unable to sell our excess inventories to others, and the estimated realizable value of such inventories to us is generally zero.

We base our assessment of the recoverability of our inventories, and the amounts of any write-downs, on currently available information and assumptions about future demand and market conditions. Demand for our products may fluctuate significantly over time, and actual demand and market conditions may be more or less favorable than those projected by management. In the event that actual demand is lower than originally projected, additional inventory write-downs may be required.

Table of Contents

We have had significant inventory write-downs in the past. It is our policy to hold these inventories and sell them if we experience renewed demand for these products. In the first nine months of fiscal 2009, we sold $1.3 million in inventories which we had written down to a zero cost basis in fiscal 2001. In the comparable period of fiscal 2008, we sold $1.1 million of this zero cost basis inventory.

Research and Development

	Three months ended			Nine months ended		
($ in millions)	July 3, 2009	Change	June 27, 2008	July 3, 2009	Change	June 27, 2008
Research and development	$ 12.1	(18%)	$ 14.8	$ 38.5	(9%)	$ 42.2
Percent of net revenues	37%		39%	42%		38%

Our research and development (R&D) expenses consist principally of direct personnel costs, photomasks, electronic design automation tools and pre-production evaluation and test costs. The $2.7 million decrease in R&D expenses for the third quarter of fiscal 2009 compared to the third quarter of fiscal 2008 reflects a $1.4 million decrease in compensation and personnel-related costs, including stock compensation expense mainly due to a focused effort to reduce costs associated with our workforce, including headcount reductions associated with our recent restructuring activities. For further information on these restructuring activities, see Note 8 - Special Charges to our consolidated financial statements. In addition, R&D expense in the third quarter of fiscal 2008 included $0.7 million related to severance benefits payable to certain former employees as a result of organizational changes, which were not incurred in the comparable fiscal 2009 period.

The $3.7 million decrease in R&D expenses for the first nine months of fiscal 2009 compared to the first nine months of fiscal 2008 is primarily driven by a $3.0 million decrease in compensation and personnel-related costs, including stock compensation expense mainly due to a focused effort to reduce costs associated with our workforce, including headcount reductions associated with our recent restructuring activities. In addition, R&D expense in the first nine months of fiscal 2008 included $0.7 million related to severance benefits payable to certain former employees as a result of organizational changes, which were not incurred in the comparable fiscal 2009 period.

Selling, General and Administrative

	Three months ended			Nine months ended		
($ in millions)	July 3, 2009	Change	June 27, 2008	July 3, 2009	Change	June 27, 2008
Selling, general and administrative	$ 9.9	(12%)	$ 11.2	$ 31.7	(8%)	$ 34.4
Percent of net revenues	30%		29%	35%		31%

Our selling, general and administrative (SG&A) expenses include personnel costs, independent sales representative commissions and product marketing, applications engineering and other marketing costs. Our SG&A expenses also include costs of corporate functions, including finance, legal, human resources, information systems and communications. The $1.3 million decrease in our SG&A expenses for the third quarter of fiscal 2009 compared to the third quarter of fiscal 2008 reflects a $0.6 million decrease in compensation and personnel-related costs, including stock compensation expense mainly due to a focused effort to reduce costs associated with our workforce, including headcount reductions associated with our recent restructuring activities. For further information on these restructuring activities, see Note 8 Special Charges to our consolidated financial statements. The decrease in SG&A also reflects a $0.4 million decrease in professional fees and a $0.2 million decrease in commissions paid to our sales representatives.

The $2.7 million decrease in our SG&A expenses in the first nine months of fiscal 2009 compared to the first nine months of fiscal 2008 period reflects a $0.8 million in stock compensation expense, a $0.8 million decrease in professional fees and a $0.7 million decrease in commissions paid to our sales representatives. In addition, SG&A expense in the first nine months of fiscal 2008 included a $0.3 million decrease related to severance benefits payable

to a former officer, which were not incurred in the comparable fiscal 2009 period.

Table of Contents

Special Charges

Special charges consist of the following:

($ in millions)	Three months ended July 3, 2009	Three months ended June 27, 2008	Nine months ended July 3, 2009	Nine months ended June 27, 2008
Asset impairments	$	$	$ 2.9	$
Restructuring charges		0.1	4.0	0.3
Total special charges	$	$ 0.1	$ 6.9	$ 0.3

Asset Impairments

During the nine months ended July 3, 2009, we recorded asset impairment charges totaling $2.9 million. Included in this amount are asset impairment charges totaling $0.5 million related to software and property and equipment that we determined to abandon or scrap, as well as asset impairment charges totaling $2.4 million to write-down the carrying value of goodwill related to our acquisition of certain assets of Ample Communications in the fourth quarter of fiscal 2007. In the second quarter of fiscal 2009, our Ample Communications reporting unit experienced a severe decline in sales and profitability due to a significant decline in demand that we believe was a result of the downturn in global economic conditions as well as a bankruptcy filed by the reporting unit s most significant customer. The drop in market demand resulted in significant declines in unit sales. Due to these market and economic conditions, our Ample Communications reporting unit has experienced a significant decline in market value. As a result, we concluded that there were sufficient factual circumstances for interim impairment analyses under SFAS No. 142. Accordingly, in the second quarter of fiscal 2009, we performed an assessment of goodwill for impairment. Based on the results of our assessment of goodwill for impairment, we determined that the carrying value of the Ample Communications reporting unit exceeded its estimated fair value. Therefore, we performed a second step of the impairment test to estimate the implied fair value of goodwill. The required analysis indicated that there would be no remaining implied value attributable to goodwill in the Ample Communications reporting unit and accordingly, we impaired the entire goodwill balance of $2.4 million.

Restructuring Charges

Mindspeed Second Quarter Fiscal 2009 Restructuring Plan In the second quarter of fiscal 2009, we announced the implementation of cost reduction measures with most of the savings expected to be derived from focused reductions in the areas of sales, general and administrative and wide area networking communication spending, including the closure of our Dubai facility. Combined with the impact of our first quarter fiscal 2009 restructuring efforts discussed below, these cost saving initiatives were the primary driver in reducing operating expenses in the third quarter of fiscal 2009 by approximately $4.0 million from the third quarter of fiscal 2008. In the first nine months of fiscal 2009, we incurred special charges of $1.1 million to this restructuring primarily related to severance costs for affected employees. As of the end of the third quarter of fiscal 2009, this restructuring plan was substantially complete and we do not expect to incur significant additional costs related to this restructuring plan in future periods.

Activity and liability balances related to our second quarter fiscal 2009 restructuring plan through July 3, 2009 are as follows (in thousands):

	Workforce Reductions	Facility Other	Total
Charged to costs and expenses	$ 1,047	$ 87	$ 1,134
Cash payments	(839)		(839)
Non-cash charges		(87)	(87)
Restructuring balance, July 3, 2009	$ 208	$	$ 208

The remaining accrued restructuring balance principally represents employee severance benefits. We expect to pay these obligations over their respective terms, which expire at various dates through fiscal 2010.

Mindspeed First Quarter Fiscal 2009 Restructuring Plan During the first quarter of fiscal 2009, we implemented a restructuring plan under which we reduced our workforce by approximately 6%. In connection with this reduction in workforce, in the first nine months of 2009, we recorded a charge of $2.4 million for severance benefits payable to the affected employees. In December 2008, we vacated approximately 70% of our Massachusetts facility and recorded a charge related to contractual obligations on this space of approximately $0.4 million. As of the end of the third quarter of fiscal 2009, this restructuring plan was substantially complete, and we do not expect to incur significant additional costs related to this restructuring plan in future periods.

Activity and liability balances related to our second quarter fiscal 2009 restructuring plan through July 3, 2009 are as follows (in thousands):

	Workforce Reductions	Facility and Other	Total
Charged to costs and expenses	$ 2,405	$ 368	$ 2,773
Cash payments	(1,823)	(143)	(1,966)
Non-cash charges	(3)	(92)	(95)
Restructuring balance, July 3, 2009	$ 579	$ 133	$ 712

The remaining accrued restructuring balance principally represents obligations under non-cancelable leases, employee severance benefits and other contractual commitments. We expect to pay these obligations over their respective terms, which expire at various dates through fiscal 2011.

Mindspeed Restructuring Plans In fiscal 2006 and 2007, we implemented a number of cost reduction initiatives to improve our operating cost structure. These cost reduction initiatives included workforce reductions, significant reductions in capital spending and the consolidation of certain facilities.

The remaining accrued restructuring balance under these initiatives is $0.1 million at July 3, 2009 and principally represents obligations under a non-cancelable lease and a settlement with a former employee. We expect to pay these obligations in the fourth quarter of fiscal 2009. Activity under these initiatives was minimal in the first nine months of fiscal 2009.

Interest Expense

	Three months ended		Nine months ended	
($ in millions)	**July 3, 2009**	**June 27, 2008**	**July 3, 2009**	**June 27, 2008**
Interest expense	$ 0.5	$ 0.6	$ 1.4	$ 1.7

Interest expense represents interest on our convertible senior notes.

Other Income (Expense), Net

	Three months ended		Nine months ended	
($ in millions)	**July 3, 2009**	**June 27, 2008**	**July 3, 2009**	**June 27, 2008**
Other income (expense), net	$ (0.3)	$ 0.2	$ 2.9	$ 0.1

Other income (expense) principally consists of interest income, foreign exchange gains and losses and other non-operating gains and losses including gains/losses on debt extinguishments. The $0.3 million in other expense in the third quarter of fiscal 2009 primarily represents net foreign exchange losses. The $0.2 million in other income for the third quarter of fiscal 2008 primarily represents net foreign exchange gains and interest income.

The $2.9 million in other income for the first nine months of fiscal 2009 principally reflects the $2.9 million gain we recorded in connection with the extinguishment of $20.5 million aggregate principle amount of our 3.75% convertible

senior notes for cash of $17.3 million. In connection with the extinguishment, $0.3 million in debt discount and debt issuance costs were written off. The net $0.1 million in other income for the first nine months of fiscal 2008 represents net foreign exchange losses offset by interest income.

Table of Contents

Provision for Income Taxes

Our provision for income taxes for the first nine months of fiscal 2009 and fiscal 2008 principally consisted of income taxes incurred by our foreign subsidiaries. We expect that our provision for income taxes for fiscal 2009 will principally consist of income taxes related to our foreign operations.

Liquidity and Capital Resources

Cash used in operating activities was $7.7 million for the first nine months of fiscal 2009 compared to cash provided by operating activities of $11.6 million for the first nine months of fiscal 2008. Operating cash flows for the first nine months of fiscal 2009 reflect our net loss of $21.1 million, offset by non-cash charges (depreciation and amortization, asset impairments, restructuring charges, stock-based compensation expense, inventory provisions, gain on debt extinguishment and other) of $15.0 million, and net working capital increases of approximately $1.6 million.

The net working capital increases for the first nine months of fiscal 2009 consisted principally of a $4.7 million decrease in accounts payable related to both the timing of payments as well as the volume of payments due to decreases in production volumes. In addition, the increase in working capital is due to payments of $2.8 million related to our fiscal 2009 restructuring actions, as well as a $2.6 million decrease in accrued expenses and other current liabilities. These working capital increases were mostly offset by a decrease of $6.3 million in accounts receivable resulting from a decrease in our revenues and a decrease in our average collection period, as well as a decrease of $3.4 million in inventory resulting from our efforts to decrease inventory on hand.

Cash used in investing activities of $5.9 million for the first nine months of fiscal 2009 consisted of payments on capital expenditures. Cash used in investing activities of $7.6 million for the first nine months of fiscal 2008 principally consisted of $6.4 million of capital expenditures and payments associated with our acquisition of certain assets of Ample Communications of $1.2 million.

Cash used in financing activities of $17.6 million for the first nine months of fiscal 2009 principally consisted of $17.3 million paid to retire $20.5 million in principle amount of our 3.75% convertible senior notes due in November 2009 and $0.3 million of debt issuance costs paid related to both our revolving credit facility and the issuance of our 6.5% convertible senior notes due in 2013. Cash provided by financing activities of $0.1 million for the first nine months of fiscal 2008 consisted of proceeds from the exercise of stock options.

As of July 3, 2009, we had cash and cash equivalent balances of $11.9 million and working capital of $4.1 million. As of October 3, 2008, our cash and cash equivalent balance was $43.0 million and working capital was $50.2 million. The most significant driver of both the decrease in cash as well as the decrease in working capital was the repurchase of $20.5 million aggregate principal amount of our 3.75% convertible senior notes due in November 2009. In addition, the remaining $10.5 million of our 3.75% convertible senior notes currently outstanding has moved from long-term to current liability classification.

Revolving Credit Facility and Convertible Senior Notes

Revolving Credit Facility

On September 30, 2008, we entered into a loan and security agreement with Silicon Valley Bank, or SVB, which was amended effective March 2, 2009. Under the loan and security agreement, SVB has agreed to provide us with a three-year revolving credit line of up to $15.0 million, subject to availability against certain eligible accounts receivable, for the purposes of (i) working capital; (ii) funding our general business requirements; and (iii) repaying or repurchasing our 3.75% convertible senior notes due in 2009. Our indebtedness to SVB under the loan and security agreement is guaranteed by three of our domestic subsidiaries and secured by substantially all of the domestic assets of the company and such subsidiaries, other than intellectual property.

Any indebtedness under the loan and security agreement bears interest at a variable rate ranging from prime plus 0.25% to a maximum rate of prime plus 1.25%, as determined in accordance with the interest rate grid set forth in the loan and security agreement. The loan and security agreement contains affirmative and negative covenants which, among other things, require us to maintain a minimum tangible net worth and to deliver to SVB specified financial information, including annual, quarterly and monthly financial information, and limit our ability to (or to permit any subsidiaries to), subject to certain exceptions and limitations: (i) merge with or acquire other companies; (ii) create liens on our property; (iii) incur debt obligations; (iv) enter into transactions with affiliates, except on an arm s length basis; (v) dispose of property; and (vi) issue dividends or make distributions.
As of July 3, 2009, the Company was in compliance with all required covenants under our revolving credit facility and had no outstanding borrowings under the revolving credit facility.
3.75% Convertible Senior Notes due 2009
In December 2004, we sold an aggregate principal amount of $46.0 million in convertible senior notes due in November 2009, of which only $10.5 million in aggregate principal amount is currently outstanding, for net proceeds (after discounts and commissions) of approximately $43.9 million. The notes are senior unsecured obligations, ranking equal in right of payment with all future unsecured indebtedness. The notes bear interest at a rate of 3.75%, payable semiannually in arrears each May 18 and November 18. The notes are due November 18, 2009. We used approximately $3.3 million of the proceeds to purchase U.S. government securities that were pledged to the trustee for the payment of the first four scheduled interest payments on the notes when due.
The notes are convertible, at the option of the holder, at any time prior to maturity into shares of our common stock. Upon conversion, we may, at our option, elect to deliver cash in lieu of shares of our common stock or a combination of cash and shares of common stock. Effective May 13, 2005, the conversion price of the notes was adjusted to $11.55 per share of common stock, which is equal to a conversion rate of approximately 86.58 shares of common stock per $1,000 principal amount of notes. Prior to this adjustment, the conversion price applicable to the notes was $14.05 per share of common stock, which was equal to approximately 71.17 shares of common stock per $1,000 principal amount of notes. The adjustment was made pursuant to the terms of the indenture governing the notes. The conversion price is subject to further adjustment under the terms of the indenture to reflect stock dividends, stock splits, issuances of rights to purchase shares of common stock and certain other events.
If we undergo certain fundamental changes (as defined in the indenture), holders of notes may require us to repurchase some or all of their notes at 100% of the principal amount plus accrued and unpaid interest. If, upon notice of certain events constituting a fundamental change, holders of the notes elect to convert the notes, we may be required to make an additional cash payment per $1,000 principal amount of notes in connection with the conversion. The amount of the additional cash payment, if any, will be determined by reference to a table set forth in the indenture governing the notes and our average stock price (as determined in accordance with the indenture) for the 20 trading days following the conversion date. If an applicable fundamental change were to occur between November 18, 2008 and November 18, 2009, the amount of the additional cash payment would be equal to such average stock price times a multiplier of up to 11.95. Our obligation to make the additional cash payment will not apply to fundamental changes that occur on or after November 18, 2009, and the applicable multiplier will decrease on a daily basis through that date. Notwithstanding the foregoing, no additional cash payment will be required if the applicable average stock price is less than $11.50 per share (subject to adjustment as set forth in the indenture). In the event of a non-stock change of control constituting a public acquirer change of control (as defined in the indenture), we may, in lieu of making an additional cash payment upon conversion as required by the indenture, elect to adjust the conversion price and the related conversion obligation such that the noteholders will be entitled to convert their notes into a number of shares of public acquirer common stock.
For financial accounting purposes, our contingent obligation to issue additional shares or make an additional cash payment upon conversion following a fundamental change is an embedded derivative. As of July 3, 2009, the liability under the fundamental change adjustment has been recorded at its estimated fair value and is not significant.
On July 30, 2008, we entered into separate exchange agreements with certain holders of our existing 3.75% convertible senior notes due 2009, pursuant to which holders of an aggregate of $15.0 million of the existing notes agreed to exchange their notes for $15.0 million in aggregate principal amount of our 6.50% convertible senior notes

due in August 2013 (discussed below). The exchanges closed on August 1, 2008. We paid at the closing an aggregate of approximately $0.1 million in accrued and unpaid interest on the existing notes that were exchanged for the new notes, as well as $0.9 million in transaction fees.

In October 2008, we repurchased $20.5 million aggregate principal amount of our 3.75% convertible senior notes due in November 2009, for cash of $17.3 million. The repurchases occurred in two separate transactions on October 16 and October 23, 2008. The related debt discount and debt issuance costs totaling $0.3 million were written off. The repurchase resulted in a gain on debt extinguishment of $2.9 million. At July 3, 2009, $10.5 million in aggregate principal amount of our 3.75% convertible senior notes were outstanding.

6.50% Convertible Senior Notes due 2013

We issued the convertible senior notes due in August 2013, or new notes, pursuant to an indenture, dated as of August 1, 2008, between us and Wells Fargo Bank, N.A., as trustee.

The new notes are unsecured senior indebtedness and bear interest at a rate of 6.50% per annum. Interest is payable on February 1 and August 1 of each year, commencing on February 1, 2009. The new notes mature on August 1, 2013. At maturity, we will be required to repay the outstanding principal of the new notes. At July 3, 2009, $15.0 million in aggregate principal amount of our 6.50% convertible senior notes were outstanding.

The new notes are convertible at the option of the holders, at any time on or prior to maturity, into shares of our common stock at a conversion rate initially equal to approximately $4.74 per share of common stock, which is subject to adjustment in certain circumstances. Upon conversion of the new notes, we generally have the right to deliver to the holders thereof, at our option: (i) cash; (ii) shares of our common stock; or (iii) a combination thereof. The initial conversion price of the new notes will be adjusted to reflect stock dividends, stock splits, issuances of rights to purchase shares of our common stock, and upon other events. If we undergo certain fundamental changes prior to maturity of the new notes, the holders thereof will have the right, at their option, to require us to repurchase for cash some or all of their new notes at a repurchase price equal to 100% of the principal amount of the new notes being repurchased, plus accrued and unpaid interest (including additional interest, if any) to, but not including, the repurchase date, or convert the new notes into shares of our common stock and, under certain circumstances, receive additional shares of our common stock in the amount provided in the indenture.

For financial accounting purposes, our contingent obligation to issue additional shares or make additional cash payment upon conversion following a fundamental change is an embedded derivative. As of July 3, 2009, the liability under the fundamental change adjustment has been recorded at its estimated fair value and is not significant.

If there is an event of default under the new notes, the principal of and premium, if any, on all the new notes and the interest accrued thereon may be declared immediately due and payable, subject to certain conditions set forth in the indenture. An event of default under the indenture will occur if we: (i) are delinquent in making certain payments due under the new notes; (ii) fail to deliver shares of common stock or cash upon conversion of the new notes; (iii) fail to deliver certain required notices under the new notes; (iv) fail, following notice, to cure a breach of a covenant under the new notes or the indenture; (v) incur certain events of default with respect to other indebtedness; or (vi) are subject to certain bankruptcy proceedings or orders. If we fail to deliver certain SEC reports to the trustee in a timely manner as required by the indenture, (x) the interest rate applicable to the new notes during the delinquency will be increased by 0.25% or 0.50%, as applicable (depending on the duration of the delinquency), and (y) if the required reports are not delivered to the trustee within 180 days after their due date under the indenture, a holder of the new notes will generally have the right, subject to certain limitations, to require us to repurchase all or any portion of the new notes then held by such holder.

Conexant Warrant

On June 27, 2003, Conexant Systems, Inc. completed the distribution to Conexant stockholders of all outstanding shares of common stock of our company, its wholly owned subsidiary. In the distribution, each Conexant stockholder received one fifth of one share of our common stock (including an associated preferred share purchase right) for every three shares of Conexant common stock held and cash for any fractional share of our common stock. Following the distribution, we began operations as an independent, publicly held company.

In the distribution, we issued to Conexant a warrant to purchase six million shares of our common stock at a price of $17.04 per share, exercisable for a period of ten years after the distribution. The warrant may be transferred or sold in whole or part at any time. The warrant contains antidilution provisions that provide for adjustment of the exercise price, and the number of shares issuable under the warrant, upon the occurrence of certain events. If we issue, or are deemed to have issued, shares of our common stock, or securities convertible into our common stock, at prices below the current market price of our common stock (as defined in the warrants) at the time of the issuance of such securities, the warrant s exercise price will be reduced and the number of shares issuable under the warrant will be increased. The amount of such adjustment if any, will be determined pursuant to a formula specified in the warrant and will depend on the number of shares issued, the offering price and the current market price of our common stock at the time of the issuance of such securities. Adjustments to the warrant pursuant to these antidilution provisions may result in significant dilution to the interests of our existing stockholders and may adversely affect the market price of our common stock. The antidilution provisions may also limit our ability to obtain additional financing on terms favorable to us.

Moreover, we may not realize any cash proceeds from the exercise of the warrant held by Conexant. A holder of the warrant may opt for a cashless exercise of all or part of the warrant. In a cashless exercise, the holder of the warrant would make no cash payment to us and would receive a number of shares of our common stock having an aggregate value equal to the excess of the then-current market price of the shares of our common stock issuable upon exercise of the warrant over the exercise price of the warrant. Such an issuance of common stock would be immediately dilutive to the interests of other stockholders.

Liquidity

Our principal sources of liquidity are our existing cash and cash equivalent balances, cash generated from product sales and the sales or licensing of our intellectual property, and our existing unused line of credit with Silicon Valley Bank. As of July 3, 2009, our cash and cash equivalents totaled $11.9 million. Our working capital as of July 3, 2009 was $4.1 million.

In order to regain and sustain profitability and positive cash flows from operations, we may need to further reduce operating expenses and/or maintain increased revenues. During the first nine months of fiscal 2009, we initiated and substantially completed series of cost reduction actions designed to improve our operating cost structure. These expense reductions alone may not allow us to return to the profitability we achieved in the fourth quarter of fiscal 2008. Our ability to achieve the necessary revenue growth to return to profitability will depend on increased demand for network infrastructure equipment that incorporates our products, which in turn depends primarily on the level of capital spending by communications service providers and enterprises the level of which may decrease due to general economic conditions, and uncertainty, over which we have no control. We may not be successful in achieving the necessary revenue growth or we may be unable to sustain past and future expense reductions in subsequent periods. We may not be able to regain and sustain profitability.

We believe that our existing sources of liquidity, along with cash expected to be generated from product sales and the sale and licensing of intellectual property, will be sufficient to fund our operations, research and development efforts, anticipated capital expenditures, working capital and other financing requirements for at least the next 12 months, including the repayment of the remaining $10.5 million in senior convertible debt due in November 2009. From time to time, we may acquire our debt securities through privately negotiated transactions, tender offers, exchange offers (for new debt or other securities), redemptions or otherwise, upon such terms and at such prices as we may determine appropriate. We will need to continue a focused program of capital expenditures to meet our research and development and corporate requirements. We may also consider acquisition opportunities to extend our technology portfolio and design expertise and to expand our product offerings. In order to fund capital expenditures, increase our working capital or complete any acquisitions, we may seek to obtain additional debt or equity financing. We may also need to seek to obtain additional debt or equity financing if we experience downturns or cyclical fluctuations in our business that are more severe or longer than anticipated or if we fail to achieve anticipated revenue and expense levels. However, we cannot assure you that such financing will be available to us on favorable terms, or at all, particularly in light of recent economic conditions in the capital markets.

Table of Contents

Off-Balance Sheet Arrangements

We have made guarantees and indemnities, under which we may be required to make payments to a guaranteed or indemnified party, in relation to certain transactions. In connection with the distribution, we generally assumed responsibility for all contingent liabilities and then-current and future litigation against Conexant or its subsidiaries related to our business. We may also be responsible for certain federal income tax liabilities under the tax allocation agreement between us and Conexant, which provides that we will be responsible for certain taxes imposed on us, Conexant or Conexant stockholders. In connection with certain facility leases, we have indemnified our lessors for certain claims arising from the facility or the lease. We indemnify our directors, officers, employees and agents to the maximum extent permitted under the laws of the State of Delaware. The duration of the guarantees and indemnities varies, and in many cases is indefinite. The majority of our guarantees and indemnities do not provide for any limitation of the maximum potential future payments we could be obligated to make. We have not recorded any liability for these guarantees and indemnities in the accompanying consolidated balance sheets.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Our cash and cash equivalents consist of commercial paper and highly-liquid money market funds. Our main investment objectives are the preservation of investment capital and the maximization of after-tax returns on our investment portfolio. Consequently, we invest in the securities that meet high credit quality standards and we limit the amount of our credit exposure to any one issuer. We do not use derivative instruments for speculative or investment purposes.

Interest Rate Risk

Our cash and cash equivalents are not subject to significant interest rate risk due to the short maturities or variable interest rate characteristics of these instruments. As of July 3, 2009, the carrying value of our cash and cash equivalents approximates fair value.

Our debt consists of our long-term revolving credit facility and our short-term and long-term convertible senior notes. Our convertible senior notes bear interest at fixed rates of 3.75% and 6.50%. Consequently, our results of operations and cash flows are not subject to any significant interest rate risk relating to our convertible senior notes. Advances under our credit facility bear interest at a variable rate ranging from prime plus 0.25% to a maximum rate of prime plus 1.25%, as determined in accordance with the interest rate grid set forth in the loan and security agreement. If the prime rate increases, thereby increasing our effective borrowing rate by the same amount, cash interest expense related to the credit facility would increase dependent on any outstanding borrowings. Because there were no borrowings on the credit facility as of the end of the third quarter of fiscal 2009, any change in the prime interest rate would not have a material effect on our obligations under the credit facility.

Foreign Exchange Risk

We transact business in various foreign currencies and we face foreign exchange risk on assets and liabilities that are denominated in foreign currencies. The majority of our foreign exchange risks are not hedged; however, from time to time, we may utilize foreign currency forward exchange contracts to hedge a portion of our exposure to foreign exchange risk.

These hedging transactions are intended to offset the gains and losses we experience on foreign currency transactions with gains and losses on the forward contracts, so as to mitigate our overall risk of foreign exchange gains and losses. We do not enter into forward contracts for speculative or trading purposes. At July 3, 2009, we held no foreign currency forward exchange contracts. Based on our overall currency rate exposure at July 3, 2009, a 10% change in currency rates would not have a material effect on our consolidated financial position, results of operations or cash flows.

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Under the supervision and with the participation of our management, including our Chief Executive Officer and our Chief Financial Officer, we have evaluated the effectiveness of the design and operation of our disclosure controls and procedures as of July 3, 2009. Disclosure controls and procedures are defined under SEC rules as controls and other procedures that are designed to ensure that information required to be disclosed by us in the reports that we file or submit under the Securities Exchange Act of 1934, as amended, is recorded, processed, summarized and reported within the time periods specified in the SEC s rules and forms, and that such information is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate, to allow for timely decisions regarding required disclosure. Based upon that evaluation, our Chief Executive Officer and our Chief Financial Officer have concluded that, as of July 3, 2009, these disclosure controls and procedures were effective.

Changes in Internal Control over Financial Reporting

There were no changes in our internal control over financial reporting during the fiscal quarter ended July 3, 2009 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II. OTHER INFORMATION

ITEM 1A. RISK FACTORS

We have revised the risk factors that relate to our business, as set forth below. These risks include any material changes to and supersede the risks previously disclosed in Part I, Item 1A of our Annual Report on Form 10-K for the fiscal year ended October 3, 2008, Part II, Item 1A of our Quarterly Reports on Form 10-Q for the quarters ended January 2, 2009 and April 3, 2009. We encourage investors to review these risk factors, as well as those contained under Forward-Looking Statements preceding Part I of this Report.

Our business, financial condition and operating results can be affected by a number of factors, including those listed below, any one of which could cause our actual results to vary materially from recent results or from our anticipated future results. Any of these risks could also materially and adversely affect our business, financial condition or the price of our common stock or other securities.

We have substantial cash requirements to fund our operations, research and development efforts and capital expenditures. Our capital resources are limited and capital needed for our business may not be available when we need it.

In the first nine months of fiscal 2009, we used $7.7 million cash in operating activities. Although in fiscal 2008, we generated $26.7 million in cash from operating activities, our operating activities used cash in the first nine months of fiscal 2009 as well as in periods prior to 2008. Our principal sources of liquidity are our existing cash balances and cash generated from product sales and sales and licensing of intellectual property. As of July 3, 2009, our cash and cash equivalents totaled $11.9 million. We believe that our existing sources of liquidity, along with cash expected to be generated from product sales and the sale and licensing of intellectual property and our existing line of credit with Silicon Valley bank, subject to availability, will be sufficient to fund our operations, research and development efforts, anticipated capital expenditures, working capital and other financing requirements for at least the next 12 months, including the repayment of the remaining $10.5 million in senior convertible debt due in November 2009. However, this may not be the case, and if we incur operating losses and negative cash flows in the future, we may need to further reduce our operating costs or obtain alternate sources of financing, or both. We have completed transactions that involved the issuance or incurrence of indebtedness, including credit facilities. Even after completing these transactions, we may need additional capital in the future and may not have access to additional sources of capital on favorable terms or at all. If we raise additional funds through the issuance of equity, equity-based or debt securities, such securities may have rights, preferences or privileges senior to those of our common stock and our stockholders may experience dilution of their ownership interests. In addition, there can be no assurance that we will continue to benefit from the sale or licensing of intellectual property as we have in previous periods.

We have incurred operating losses in the past and we may incur losses in future periods.

We incurred a net loss of $21.1 million in the first nine months of fiscal 2009. Although we generated net income of $7.2 million in fiscal 2008, we incurred losses in periods prior to fiscal 2008, we have incurred losses in the first nine months of fiscal 2009, and we may continue to incur losses and negative cash flows in future periods.

In order to regain and sustain profitability and positive cash flows from operations, we must further reduce operating expenses and/or increase our revenues. In the first nine months of fiscal 2009, we have initiated a series of cost reduction actions designed to improve our operating cost structure. These expense reductions alone may not allow us to return to profitability, or to sustain the profitability we achieved in the fourth quarter of fiscal 2008. Our ability to achieve the necessary revenue growth to return to profitability will depend on increased demand for network infrastructure equipment that incorporates our products, which in turn depends primarily on the level of capital spending by communications service providers and enterprises, the level of which may decrease due to general economic conditions, and uncertainty, over which we have no control. We may not be successful in achieving the necessary revenue growth or the expected expense reductions. Moreover, we may be unable to sustain past or expected future expense reductions in subsequent periods. We may not be able to regain profitability or sustain the profitability we achieved in prior periods.

Our operating results may be adversely impacted by worldwide political and economic uncertainties and specific conditions in the markets we address, including the cyclical nature of and volatility in the semiconductor industry. As a result, the market price of our common stock may decline.

We operate primarily in the semiconductor industry, which is cyclical and subject to rapid change and evolving industry standards. From time to time, the semiconductor industry has experienced significant downturns, such as the current downturn. These downturns are characterized by decreases in product demand, excess customer inventories and accelerated erosion of prices. These factors could cause substantial fluctuations in our revenue and in our results of operations. Any downturns in the semiconductor industry may be severe and prolonged, and any failure of the industry or wired and wireless communications markets to fully recover from downturns could seriously impact our revenue and harm our business, financial condition and results of operations. The semiconductor industry also periodically experiences increased demand and production capacity constraints, which may affect our ability to ship products. Accordingly, our operating results may vary significantly as a result of the general conditions in the semiconductor industry, which could cause large fluctuations in our stock price.

Additionally, recently general worldwide economic conditions have experienced a deterioration due to credit conditions resulting from the current financial crisis affecting the banking system and financial markets and other factors, slower economic activity, concerns about inflation and deflation, volatility in energy costs, decreased consumer confidence, reduced corporate profits and capital spending, adverse business conditions and liquidity concerns in the wired and wireless communications markets, recent international conflicts and terrorist and military activity, and the impact of natural disasters and public health emergencies. These conditions make it extremely difficult for our customers, our vendors and us to accurately forecast and plan future business activities, and they could cause U.S. and foreign businesses to further slow spending on our products and services, which would delay and lengthen sales cycles. Furthermore, during challenging economic times, our customers may face issues gaining timely access to sufficient credit or could even need to file for bankruptcy. Either of these circumstances could result in an impairment of their ability to make timely payments to us. If these circumstances were to occur, we may be required to increase our allowance for doubtful accounts and our days sales outstanding would be negatively impacted.

Additionally, in periods of high volatility, semiconductor companies, being several steps removed from the end consumer in the supply chain, traditionally experience growth patterns different from those experienced by end customers. This can manifest itself in periods of growth in excess of their customers followed by periods of under-shipment before the volatility settles down. However, given recent economic conditions, it is possible that any correlation will continue to be less predictable and will result in increased volatility in our operating results and stock price. We cannot predict the timing, strength or duration of any economic slowdown or subsequent economic recovery worldwide, in the semiconductor industry or in the wired and wireless communications markets. If the economy or markets in which we operate do not continue at their present levels or continue to deteriorate, we may record additional charges related to restructuring costs and our business, financial condition and results of operations will likely be materially and adversely affected. Additionally, the combination of our lengthy sales cycle coupled with challenging macroeconomic conditions could have a synergistic negative impact on the results of our operations.

The price of our common stock may fluctuate significantly.

The price of our common stock is volatile and may fluctuate significantly. There can be no assurance as to the prices at which our common stock will trade or that an active trading market in our common stock will be sustained in the future. The market price at which our common stock trades may be influenced by many factors, including:

- our operating and financial performance and prospects, including our ability to regain and sustain the profitability we achieved in the fourth quarter of fiscal 2008;
- the depth and liquidity of the market for our common stock which can impact, among other things, the volatility of our stock price and the availability of market participants to borrow shares;
- investor perception of us and the industry in which we operate;
- the level of research coverage of our common stock;

Table of Contents

- changes in earnings estimates or buy/sell recommendations by analysts;
- general financial and other market conditions; and
- domestic and international economic conditions.

In addition, public stock markets have experienced, and may in the future experience, extreme price and trading volume volatility, particularly in the technology sectors of the market. This volatility has significantly affected the market prices of securities of many technology companies for reasons frequently unrelated to or disproportionately impacted by the operating performance of these companies. These broad market fluctuations may adversely affect the market price of our common stock. If our common stock trades below $1.00 for 30 consecutive trading days, or if we otherwise do not meet the requirements for continued quotation on the Nasdaq Global Market (NASDAQ), our common stock could be delisted which would adversely affect the ability of investors to sell shares of our common stock and could otherwise adversely affect our business.

Our operating results are subject to substantial quarterly and annual fluctuations.

Our revenues and operating results have fluctuated in the past and may fluctuate in the future. These fluctuations are due to a number of factors, many of which are beyond our control. These factors include, among others:

- changes in end-user demand for the products manufactured and sold by our customers;
- the effects of competitive pricing pressures, including decreases in average selling prices of our products;
- the gain or loss of significant customers;
- market acceptance of our products and our customers   products;
- our ability to develop, introduce, market and support new products and technologies on a timely basis;
- intellectual property disputes;
- the timing of receipt, reduction or cancellation of significant orders by customers;
- fluctuations in the levels of component inventories held by our customers and changes in our customers inventory management practices;
- shifts in our product mix and the effect of maturing products;
- availability and cost of products from our suppliers;
- the timing and extent of product development costs;
- new product and technology introductions by us or our competitors;
- fluctuations in manufacturing yields; and
- significant warranty claims, including those not covered by our suppliers.

The foregoing factors are difficult to forecast, and these, as well as other factors, could materially and adversely affect our quarterly or annual operating results.

The loss of one or more key customers or distributors, or the diminished demand for our products from a key customer could significantly reduce our revenues and profits.

A relatively small number of end customers and distributors have accounted for a significant portion of our revenues in any particular period. We have no long-term volume purchase commitments from our key customers. One or more of our key customers or distributors may discontinue operations as a result of consolidation, liquidation or otherwise. Reductions, delays and cancellation of orders from our key customers or the loss of one or more key customers could significantly reduce our revenues and profits. We cannot assure you that our current customers will continue to place orders with us, that orders by existing customers will continue at current or historical levels or that we will be able to obtain orders from new customers.

We may not be able to attract and retain qualified personnel necessary for the design, development, sale and support of our products. Our success could be negatively affected if key personnel leave.

Our future success depends on our ability to attract, retain and motivate qualified personnel, including executive officers and other key management, technical and support personnel. As the source of our technological and product innovations, our key technical personnel represent a significant asset. The competition for such personnel can be intense in the semiconductor industry. We may not be able to attract and retain qualified management and other personnel necessary for the design, development, sale and support of our products.

In periods of poor operating performance, we have experienced, and may experience in the future, particular difficulty attracting and retaining key personnel. If we are not successful in assuring our employees of our financial stability and our prospects for success, our employees may seek other employment, which may materially and adversely affect our business. Moreover, our recent expense reduction and restructuring initiatives, including a series of worldwide workforce reductions, have reduced the number of our technical employees. We intend to continue to expand our international business activities including expansion of design and operations centers abroad and may have difficulty attracting and maintaining international employees. The loss of the services of one or more of our key employees, including Raouf Y. Halim, our chief executive officer, or certain key design and technical personnel, or our inability to attract, retain and motivate qualified personnel could have a material adverse effect on our ability to operate our business.

Many of our engineers are foreign nationals working in the U.S. under work visas. The visas permit qualified foreign nationals working in specialty occupations, such as certain categories of engineers, to reside in the U.S. during their employment. The number of new visas approved each year may be limited and may restrict our ability to hire additional qualified technical employees. In addition, immigration policies are subject to change, and these policies have generally become more stringent since the events of September 11, 2001. Any additional significant changes in immigration laws, rules or regulations may further restrict our ability to retain or hire technical personnel.

We are entirely dependent upon third parties for the manufacture of our products and are vulnerable to their capacity constraints during times of increasing demand for semiconductor products.

We are entirely dependent upon outside wafer fabrication facilities, known as foundries, for wafer fabrication services. Our principal suppliers of wafer fabrication services are TSMC and Jazz. We are also dependent upon third parties, including Amkor, for the assembly and testing of all of our products. Under our fabless business model, our long-term revenue growth is dependent on our ability to obtain sufficient external manufacturing capacity, including wafer production capacity. Periods of upturns in the semiconductor industry may be characterized by rapid increases in demand and a shortage of capacity for wafer fabrication and assembly and test services.

The risks associated with our reliance on third parties for manufacturing services include:

- the lack of assured supply, potential shortages and higher prices;
- increased lead times;
- limited control over delivery schedules, manufacturing yields, production costs and product quality; and
- the unavailability of, or delays in obtaining, products or access to key process technologies.

Our standard lead time, or the time required to manufacture our products (including wafer fabrication, assembly and testing) is typically 12 to 16 weeks. During periods of manufacturing capacity shortages, the foundries and other suppliers on whom we rely may devote their limited capacity to fulfill the production requirements of other clients that are larger or better financed than we are, or who have superior contractual rights to enforce the manufacture of their products, including to the exclusion of producing our products.
Additionally, if we are required to seek alternative foundries or assembly and test service providers, we would be subject to longer lead times, indeterminate delivery schedules and increased manufacturing costs, including costs to find and qualify acceptable suppliers. For example, if we choose to use a new foundry, the qualification process may take as long as six months over the standard lead time before we can begin shipping products from the new foundry. Such delays could negatively affect our relationships with our customers.
Wafer fabrication processes are subject to obsolescence, and foundries may discontinue a wafer fabrication process used for certain of our products. In such event, we generally offer our customers a last-time buy program to satisfy their anticipated requirements for our products. The unanticipated discontinuation of a wafer fabrication process on which we rely may adversely affect our revenues and our customer relationships.
The foundries and other suppliers on whom we rely may experience financial difficulties or suffer disruptions in their operations due to causes beyond our control, including deteriorations in general economic conditions, labor strikes, work stoppages, electrical power outages, fire, earthquake, flooding or other natural disasters. Certain of our suppliers manufacturing facilities are located near major earthquake fault lines in the Asia-Pacific region and in California. In the event of a disruption of the operations of one or more of our suppliers, we may not have an alternate source immediately available. Such an event could cause significant delays in shipments until we are able to shift the products from an affected facility or supplier to another facility or supplier. The manufacturing processes we rely on are specialized and are available from a limited number of suppliers. Alternate sources of manufacturing capacity, particularly wafer production capacity, may not be available to us on a timely basis. Even if alternate manufacturing capacity is available, we may not be able to obtain it on favorable terms, or at all. Difficulties or delays in securing an adequate supply of our products on favorable terms, or at all, could impair our ability to meet our customers requirements and have a material adverse effect on our operating results.
In addition, the highly complex and technologically demanding nature of semiconductor manufacturing has caused foundries to experience, from time to time, lower than anticipated manufacturing yields, particularly in connection with the introduction of new products and the installation and start-up of new process technologies. Lower than anticipated manufacturing yields may affect our ability to fulfill our customers demands for our products on a timely basis. Moreover, lower than anticipated manufacturing yields may adversely affect our cost of goods sold and our results of operations.
We are subject to the risks of doing business internationally.
A significant part of our strategy involves our continued pursuit of growth opportunities in a number of international markets. We market, sell, design and service our products internationally. Products shipped to international destinations, primarily in the Asia-Pacific region and Europe, were approximately 75% of our net revenues for the first nine months of fiscal 2009 and 73% of our net revenues for the first nine months of fiscal 2008. China is a particularly important international market for us, as more than 50% of our third quarter fiscal 2009 revenue came from customers in China. In addition, we have design centers, customer support centers, and rely on suppliers, located outside the U.S., including foundries and assembly and test service providers located in the Asia-Pacific region. We intend to continue to expand our international business activities and may open other design centers and customer support centers abroad. Our international sales and operations are subject to a number of risks inherent in selling and operating abroad which could adversely impact our international sales and could make our international operations more expensive. These include, but are not limited to, risks regarding:

- currency exchange rate fluctuations;
- local economic and political conditions;
- disruptions of capital and trading markets;

- accounts receivable collection and longer payment cycles;
- wage inflation;
- difficulties in staffing and managing foreign operations;
- potential hostilities and changes in diplomatic and trade relationships;
- restrictive governmental actions (such as restrictions on the transfer or repatriation of funds and trade protection measures, including export duties and quotas and customs duties and tariffs);
- changes in legal or regulatory requirements;
- difficulty in obtaining distribution and support;
- the laws and policies of the U.S. and other countries affecting trade, foreign investment and loans and import or export licensing requirements;
- environmental laws and regulations governing, among other things, air emissions, wastewater discharges, the use, handling and disposal of hazardous substances and wastes, soil and groundwater contamination and employee health and safety;
- tax laws;
- limitations on our ability under local laws to protect our intellectual property;
- cultural differences in the conduct of business; and
- natural disasters, acts of terrorism and war.

Because most of our international sales are currently denominated in U.S. dollars, our products could become less competitive in international markets if the value of the U.S. dollar increases relative to foreign currencies. As we continue to shift a portion of our operations offshore, more of our expenses are incurred in currencies other than those in which we bill for the related services. An increase in the value of certain currencies, such as the Euro, Ukrainian hryvnia and Indian rupee, against the U.S. dollar could increase costs of our offshore operations by increasing labor and other costs that are denominated in local currencies. For example, a decline in the value of the U.S. dollar against most major currencies in the third quarter of fiscal 2009 resulted in a foreign exchange loss of approximately $300,000 during the third quarter of fiscal 2009.

From time to time we may enter into foreign currency forward exchange contracts to mitigate the risk of loss from currency exchange rate fluctuations for foreign currency commitments entered into in the ordinary course of business. We have not entered into foreign currency forward exchange contracts for other purposes. Our financial condition and results of operations could be adversely affected by currency fluctuations.

We are subject to intense competition.

The communications semiconductor industry in general, and the markets in which we compete in particular, are intensely competitive. We compete worldwide with a number of U.S. and international semiconductor manufacturers that are both larger and smaller than we are in terms of resources and market share. We currently face significant competition in our markets and expect that intense price and product competition will continue. This competition has resulted, and is expected to continue to result, in declining average selling prices for our products.

Table of Contents

Many of our current and potential competitors have certain advantages over us, including:

- stronger financial position and liquidity;
- longer presence in key markets;
- greater name recognition;
- more secure supply chain;
- access to larger customer bases; and
- significantly greater sales and marketing, manufacturing, distribution, technical and other resources.

As a result, these competitors may be able to adapt more quickly to new or emerging technologies and changes in customer requirements or may be able to devote greater resources to the development, promotion and sale of their products than we can. Moreover, we have incurred substantial operating losses and we may continue to incur losses in future periods. We believe that financial stability of suppliers is an important consideration in our customers purchasing decisions. If our OEM customers perceive that we lack adequate financial stability, they may choose semiconductor suppliers that they believe have a stronger financial position or liquidity.

Current and potential competitors also have established or may establish financial or strategic relationships among themselves or with our existing or potential customers, resellers or other third parties. These relationships may affect customers purchasing decisions. Accordingly, it is possible that new competitors or alliances among competitors could emerge and rapidly acquire significant market share. We may not be able to compete successfully against current and potential competitors.

Our success depends on our ability to develop competitive new products in a timely manner and keep abreast of the rapid technological changes in our market.

Our operating results will depend largely on our ability to continue to introduce new and enhanced semiconductor products on a timely basis as well as our ability to keep abreast of rapid technological changes in our markets. Our products could become obsolete sooner than we expect because of faster than anticipated, or unanticipated, changes in one or more of the technologies related to our products. The introduction of new technology representing a substantial advance over current technology could adversely affect demand for our existing products. Currently accepted industry standards are also subject to change, which may also contribute to the obsolescence of our products. If we are unable to develop and introduce new or enhanced products in a timely manner, our business may be adversely affected.

Successful product development and introduction depends on numerous factors, including, among others:

- our ability to anticipate customer and market requirements and changes in technology and industry standards;
- our ability to accurately define new products;
- our ability to complete development of new products, and bring our products to market, on a timely basis;
- our ability to differentiate our products from offerings of our competitors; and
- overall market acceptance of our products.

We may not have sufficient resources to make the substantial investment in research and development in order to develop and bring to market new and enhanced products, particularly if we are required to take further cost reduction actions. Furthermore, we are required to evaluate expenditures for planned product development continually and to choose among alternative technologies based on our expectations of future market growth. We may be unable to develop and introduce new or enhanced products in a timely manner, our products may not satisfy customer requirements or achieve market acceptance, or we may be unable to anticipate new industry standards and technological changes. We also may not be able to respond successfully to new product announcements and introductions by competitors.

Research and development projects may experience unanticipated delays related to our internal design efforts. New product development also requires the production of photomask sets and the production and testing of sample devices. In the event we experience delays in obtaining these services from the wafer fabrication and assembly and test vendors on whom we rely, our product introductions may be delayed and our revenues and results of operations may be adversely affected.

Industry consolidation may harm our operating results.

There has been an increasing trend toward industry consolidation in our markets in recent years, particularly among major network equipment and telecommunications companies. We expect this trend to continue as companies attempt to strengthen or hold their market positions in an evolving industry and as companies are acquired or are unable to continue operations. While we cannot predict how consolidation in our industry will affect our customers or competitors, rapid consolidation will lead to fewer customers, with the effect that the loss of a major customer could have a material impact on results not anticipated in a customer marketplace composed of more numerous participants. Increased consolidation and competition for fewer customers may result in pricing pressures or a loss in market share, each of which could materially impact our business.

Uncertainties involving the ordering and shipment of our products could adversely affect our business.

Our sales are typically made pursuant to individual purchase orders and we generally do not have long-term supply arrangements with our customers. Generally, our customers may cancel orders until 30 days prior to shipment. In addition, we sell a substantial portion of our products through distributors, some of whom have a right to return unsold products to us. Sales to distributors accounted for approximately 44% of our revenues for the first nine months of fiscal 2009 and 55% of our revenues for the first nine months of fiscal 2008.

Because of the significant lead times for wafer fabrication and assembly and test services, we routinely purchase inventory based on estimates of end-market demand for our customers products. End-market demand may be subject to dramatic changes and is difficult to predict. End-market demand is highly influenced by the timing and extent of carrier capital expenditures which may decrease due to general economic conditions, and uncertainty, over which we have no control. The difficulty in predicting demand may be compounded when we sell to OEMs indirectly through distributors or contract manufacturers, or both, as our forecasts of demand are then based on estimates provided by multiple parties. In addition, our customers may change their inventory practices on short notice for any reason. The cancellation or deferral of product orders, the return of previously sold products or overproduction due to the failure of anticipated orders to materialize could result in our holding excess or obsolete inventory, which could result in write-downs of inventory. Conversely, if we fail to anticipate inventory needs we may be unable to fulfill demand for our products, resulting in a loss of potential revenue.

If network infrastructure OEMs do not design our products into their equipment, we will be unable to sell those products. Moreover, a design win from a customer does not guarantee future sales to that customer.

Our products are not sold directly to the end-user but are components of other products. As a result, we rely on network infrastructure OEMs to select our products from among alternative offerings to be designed into their equipment. We may be unable to achieve these design wins. Without design wins from OEMs, we would be unable to sell our products. Once an OEM designs another supplier s semiconductors into one of its product platforms, it is more difficult for us to achieve future design wins with that OEM s product platform because changing suppliers involves significant cost, time, effort and risk for the OEM. Achieving a design win with a customer does not ensure that we will receive significant revenues from that customer and we may be unable to convert design wins into actual sales. Even after a design win, the customer is not obligated to purchase our products and can choose at any time to stop using our products if, for example, its own products are not commercially successful.

Because of the lengthy sales cycles of many of our products, we may incur significant expenses before we generate any revenues related to those products.

Our customers generally need six months or longer to test and evaluate our products and an additional six months or more to begin volume production of equipment that incorporates our products. These lengthy periods also increase the possibility that a customer may decide to cancel or change product plans, which could reduce or eliminate sales to that customer. As a result of this lengthy sales cycle, we may incur significant research and development and selling, general and administrative expenses before we generate any revenues from new products. We may never generate the anticipated revenues if our customers cancel or change their product plans as customers may increasingly do if economic conditions continue to deteriorate.

We may be subject to claims, or we may be required to defend and indemnify customers against claims, of infringement of third-party intellectual property rights or demands that we, or our customers, license third-party technology, which could result in significant expense.

The semiconductor industry is characterized by vigorous protection and pursuit of intellectual property rights. From time to time, third parties have asserted and may in the future assert patent, copyright, trademark and other intellectual property rights against technologies that are important to our business. The resolution or compromise of any litigation or other legal process to enforce such alleged third party rights, including claims arising through our contractual indemnification of our customers, or claims challenging the validity of our patents, regardless of its merit or resolution, could be costly and divert the efforts and attention of our management and technical personnel.

We may not prevail in any such litigation or other legal process or we may compromise or settle such claims because of the complex technical issues and inherent uncertainties in intellectual property disputes and the significant expense in defending such claims. If litigation or other legal process results in adverse rulings, we may be required to:

- pay substantial damages for past, present and future use of the infringing technology;
- cease the manufacture, use or sale of infringing products;
- discontinue the use of infringing technology;
- expend significant resources to develop non-infringing technology;
- pay substantial damages to our customers or end users to discontinue use or replace infringing technology with non-infringing technology;
- license technology from the third party claiming infringement, which license may not be available on commercially reasonable terms, or at all; or
- relinquish intellectual property rights associated with one or more of our patent claims, if such claims are held invalid or otherwise unenforceable.

In connection with the distribution, we generally assumed responsibility for all contingent liabilities and litigation against Conexant or its subsidiaries related to our business.

Table of Contents

If we are not successful in protecting our intellectual property rights, it may harm our ability to compete.

We rely primarily on patent, copyright, trademark and trade secret laws, as well as employee and third-party nondisclosure and confidentiality agreements and other methods, to protect our proprietary technologies and processes. We may be required to engage in litigation to enforce or protect our intellectual property rights, which may require us to expend significant resources and to divert the efforts and attention of our management from our business operations; in particular:

- the steps we take to prevent misappropriation or infringement of our intellectual property may not be successful;
- any existing or future patents may be challenged, invalidated or circumvented; or
- the measures described above may not provide meaningful protection.

Despite the preventive measures and precautions that we take, a third party could copy or otherwise obtain and use our technology without authorization, develop similar technology independently or design around our patents. We generally enter into confidentiality agreements with our employees, consultants and strategic partners. We also try to control access to and distribution of our technologies, documentation and other proprietary information. Despite these efforts, internal or external parties may attempt to copy, disclose, obtain or use our products, services or technology without our authorization. Also, former employees may seek employment with our business partners, customers or competitors, and the confidential nature of our proprietary information may not be maintained in the course of such future employment. Further, in some countries outside the U.S., patent protection is not available or not reliably enforced. Some countries that do allow registration of patents do not provide meaningful redress for patent violations. As a result, protecting intellectual property in those countries is difficult and competitors may sell products in those countries that have functions and features that infringe on our intellectual property.

The complexity of our products may lead to errors, defects and bugs, which could subject us to significant costs or damages and adversely affect market acceptance of our products.

Although we, our customers and our suppliers rigorously test our products, our products are complex and may contain errors, defects or bugs when first introduced or as new versions are released. We have in the past experienced, and may in the future experience, errors, defects and bugs. If any of our products contain production defects or reliability, safety, quality or compatibility problems that are significant to our customers, our reputation may be damaged and customers may be reluctant to buy our products, which could adversely affect our ability to retain existing customers and attract new customers. In addition, these defects or bugs could interrupt or delay sales of affected products to our customers, which could adversely affect our results of operations.

If defects or bugs are discovered after commencement of commercial production of a new product, we may be required to make significant expenditures of capital and other resources to resolve the problems. This could result in significant additional development costs and the diversion of technical and other resources from our other development efforts. We could also incur significant costs to repair or replace defective products and we could be subject to claims for damages by our customers or others against us. We could also be exposed to product liability claims or indemnification claims by our customers. These costs or damages could have a material adverse effect on our financial condition and results of operations.

We may make business acquisitions or investments, which involve significant risk.

We may, from time to time, make acquisitions, enter into alliances or make investments in other businesses to complement our existing product offerings, augment our market coverage or enhance our technological capabilities. However, any such transactions could result in:

- issuances of equity securities dilutive to our existing stockholders;
- substantial cash payments;
- the incurrence of substantial debt and assumption of unknown liabilities;
- large one-time write-offs;
- amortization expenses related to intangible assets;
- ability to use our net operating loss carryforwards;

48

the diversion of management s attention from other business concerns; and

the potential loss of key employees, customers and suppliers of the acquired business.

Integrating acquired organizations and their products and services may be expensive, time-consuming and a strain on our resources and our relationships with employees, customers and suppliers, and ultimately may not be successful. The benefits or synergies we may expect from the acquisition of complementary or supplementary businesses may not be realized to the extent or in the time frame we initially anticipate.

Additionally, in periods subsequent to an acquisition, we must evaluate goodwill and acquisition-related intangible assets for impairment. If such assets are found to be impaired, they will be written down to estimated fair value, with a charge against earnings.

Our ability to utilize our net operating loss carryforwards and certain other tax attributes may be limited.

As of October 3, 2008, we had net operating loss carryforwards of approximately $630.9 million for federal income tax purposes. Under Section 382 of the Internal Revenue Code, if a corporation undergoes an ownership change, the corporation s ability to use its pre-change net operating loss carryforwards and other pre-change tax attributes to offset its post-change income may be significantly limited. An ownership change is generally defined as a greater than 50% change in its equity ownership by value over a three-year period. We may experience an ownership change in the future as a result of shifts in our stock ownership, including upon the issuance of our common stock, the exercise of stock options or warrants or as a result of any conversion of our convertible notes into shares of our common stock, among other things. If we were to trigger an ownership change in the future, our ability to use any net operating loss carryforwards existing at that time could be significantly limited.

Our results of operations could vary as a result of the methods, estimates and judgments we use in applying our accounting policies.

The methods, estimates and judgments we use in applying our accounting policies have a significant impact on our results of operations (see Critical Accounting Policies and Estimates in Part I, Item 2 of this Quarterly Report on Form 10-Q). Such methods, estimates and judgments are, by their nature, subject to substantial risks, uncertainties and assumptions, and changes in rule making by various regulatory bodies. Factors may arise over time that lead us to change our methods, estimates and judgments. Changes in those methods, estimates and judgments could significantly affect our results of operations.

Substantial sales of the shares of our common stock issuable upon conversion of our convertible senior notes or exercise of the warrant issued to Conexant could adversely affect our stock price or our ability to raise additional financing in the public capital markets.

Conexant holds a warrant to acquire six million shares of our common stock at a price of $17.04 per share, exercisable through June 27, 2013, representing approximately 16% of our outstanding common stock on a fully diluted basis. The warrant may be transferred or sold in whole or part at any time. If Conexant sells the warrant or if Conexant or a transferee of the warrant exercises the warrant and sells a substantial number of shares of our common stock in the future, or if investors perceive that these sales may occur, the market price of our common stock could decline or market demand for our common stock could be sharply reduced. Currently, we have $25.5 million aggregate principal amount of convertible senior notes outstanding. These notes are convertible at any time, at the option of the holder, into a total of approximately 4.1 million shares of common stock. The conversion of the notes and subsequent sale of a substantial number of shares of our common stock could also adversely affect demand for, and the market price of, our common stock. Each of these transactions could adversely affect our ability to raise additional financing by issuing equity or equity-based securities in the public capital markets.

Antidilution and other provisions in the warrant issued to Conexant may also adversely affect our stock price or our ability to raise additional financing.

The warrant issued to Conexant contains antidilution provisions that provide for adjustment of the warrant s exercise price, and the number of shares issuable under the warrant, upon the occurrence of certain events. If we issue, or are deemed to have issued, shares of our common stock, or securities convertible into our common stock, at prices below the current market price of our common stock (as defined in the warrant) at the time of the issuance of such securities, the warrant s exercise price will be reduced and the number of shares issuable under the warrant will be increased. The amount of such adjustment if any, will be determined pursuant to a formula specified in the warrant and will depend on the number of shares issued, the offering price and the current market price of our common stock at the time of the issuance of such securities. Adjustments to the warrant pursuant to these antidilution provisions may result in significant dilution to the interests of our existing stockholders and may adversely affect the market price of our common stock. The antidilution provisions may also limit our ability to obtain additional financing on terms favorable to us.

Moreover, we may not realize any cash proceeds from the exercise of the warrant held by Conexant. A holder of the warrant may opt for a cashless exercise of all or part of the warrant. In a cashless exercise, the holder of the warrant would make no cash payment to us, and would receive a number of shares of our common stock having an aggregate value equal to the excess of the then-current market price of the shares of our common stock issuable upon exercise of the warrant over the exercise price of the warrant. Such an issuance of common stock would be immediately dilutive to the interests of other stockholders.

Some of our directors and executive officers may have potential conflicts of interest because of their positions with Conexant or their ownership of Conexant common stock.

Some of our directors are Conexant directors. Several of our directors and executive officers own Conexant common stock and hold options to purchase Conexant common stock. Service on our board of directors and as a director or officer of Conexant, or ownership of Conexant common stock by our directors and executive officers, could create, or appear to create, potential conflicts of interest when directors and officers are faced with decisions that could have different implications for us and Conexant. For example, potential conflicts could arise in connection with decisions involving the warrant to purchase our common stock issued to Conexant, or with respect to other agreements made between us and Conexant in connection with the distribution.

Our restated certificate of incorporation includes provisions relating to the allocation of business opportunities that may be suitable for both us and Conexant based on the relationship to the companies of the individual to whom the opportunity is presented and the method by which it was presented and also includes provisions limiting challenges to the enforceability of contracts between us and Conexant.

We may have difficulty resolving any potential conflicts of interest with Conexant, and even if we do, the resolution may be less favorable than if we were dealing with an entirely unrelated third party.

Provisions in our organizational documents and rights plan and Delaware law will make it more difficult for someone to acquire control of us.

Our restated certificate of incorporation, our amended and restated bylaws, our amended rights agreement and the Delaware General Corporation Law contain several provisions that would make more difficult an acquisition of control of us in a transaction not approved by our board of directors. Our restated certificate of incorporation and amended and restated bylaws include provisions such as:

- the division of our board of directors into three classes to be elected on a staggered basis, one class each year;
- the exclusive responsibility of the board of directors to fill vacancies on the board of directors;
- the ability of our board of directors to issue shares of our preferred stock in one or more series without further authorization of our stockholders;
- a prohibition on stockholder action by written consent;
- a requirement that stockholders provide advance notice of any stockholder nominations of directors or any proposal of new business to be considered at any meeting of stockholders;

a requirement that a supermajority vote be obtained to remove a director for cause or to amend or repeal certain provisions of our restated certificate of incorporation or amended and restated bylaws;

- elimination of the right of stockholders to call a special meeting of stockholders; and
- a fair price provision.

Our rights agreement gives our stockholders certain rights that would substantially increase the cost of acquiring us in a transaction not approved by our board of directors.

In addition to the rights agreement and the provisions in our restated certificate of incorporation and amended and restated bylaws, Section 203 of the Delaware General Corporation Law generally provides that a corporation shall not engage in any business combination with any interested stockholder during the three-year period following the time that such stockholder becomes an interested stockholder, unless a majority of the directors then in office approves either the business combination or the transaction that results in the stockholder becoming an interested stockholder or specified stockholder approval requirements are met.
