If and when the Company's stock is listed again on NASDAQ the dividend rate will drop to 8 percent.

### Note J - Earnings (loss) per share

Basic earnings (loss) per common share is computed by dividing net earnings (loss) available to common shareholders by the weighted average number of common shares outstanding during each period. Diluted earnings (loss) per common share are similarly calculated, except that the weighted average number of common shares outstanding includes common shares that may be issued subject to existing rights with dilutive potential except for periods when such calculations would be anti-dilutive.

For the six ended March 31, 2002, net earnings (loss) attributable to common shareholders includes accrued dividends at the stated dividend rate from date of issuance and a non-cash imputed dividend to the preferred shareholders related to the beneficial conversion feature on

8

the 1999 Series A and B Preferred Stock and related warrants. The beneficial conversion feature is computed as the difference between the market value of the common stock into which the Series A and B Preferred Stock can be converted and the value assigned to the Series A and B Preferred Stock in the private placement. The imputed dividend is a one-time non-cash charge against the earnings (loss) per common share. The calculation of earnings (loss) per share is included in Exhibit 11.

### NOTE K - INTERIM PERIOD COST OF GOODS SOLD

Inventory costing is based on specific identification. An inventory count is taken at the end of each quarter.

On February 8, 2002, the company executed a reverse split of one new share for each ten outstanding shares of common stock. The resultant effect was that the number of shares to be outstanding of 703,519,273 become 70,351,927 post split.
