Form 10-Q
February 08, 2006

FORM 10-Q

UNITED STATES SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the quarterly period ended December 31, 2005

Commission file number: 1-7196

CASCADE NATURAL GAS CORPORATION

(Exact name of Registrant as specified in its charter)

Washington
(State or other jurisdiction of
incorporation or organization)

222 Fairview Avenue North, Seattle, WA
(Address of principal executive offices)

91-0599090
(I.R.S. Employer
Identification No.)

98109
(Zip code)

(Registrant's telephone number including area code) **(206) 624-3900**

Edgar Filing: CASCADE NATURAL GAS CORP - Form 10-Q

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☒ No ☐

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of accelerated filer and large accelerated filer in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer ☐ Accelerated filer ☒ Non-accelerated filer ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ☐ No ☒

Indicate the number of shares outstanding of each of the registrant's classes of common stock, as of the latest practicable date.

Title	Outstanding
Common Stock, Par Value \$1 per Share	11,442,516 as of January 31, 2006

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS

THREE-MONTH PERIOD ENDED DECEMBER 31

The preceding statements were taken from the books and records of the Company and reflect all adjustments which are, in the opinion of management, necessary for a fair statement of the results for the interim periods. Because of the highly seasonal nature of the natural gas distribution business, earnings or loss for any portion of the year are disproportionate in relation to the full year.

Reference is directed to the Notes to Consolidated Financial Statements contained in the 2005 Annual Report on Form 10-K for the fiscal year ended September 30, 2005.

Note 1. New Accounting Standards

FAS No. 151: As of October 1, 2005, the Company adopted Statement of Financial Accounting Standards (FAS) No. 151, *Inventory Costs*. This standard is an amendment of Accounting Research Bulletin (ARB) No. 43, clarifying the requirement that abnormal amounts of idle facility expense, freight, handling costs, and spoilage be recognized as current period costs. Adoption of this standard did not have a significant impact on the Company's financial statements.

FAS No. 123 (revised 2004): As of October 1, 2005, the Company adopted FAS No. 123 (revised 2004), *Share-Based Payment* {FAS No. 123(R)}. This statement is a revision of FAS No. 123, *Accounting for Stock-Based Compensation*, and supersedes Accounting Principles Board (APB) Opinion No. 25, *Accounting for Stock Issued to Employees*. Under FAS No. 123(R) the Company is required to recognize as expense the fair value of equity instruments, including stock options, to be issued in exchange for goods or services. Adoption of this standard did not have a significant impact on the Company's financial statements, but additional footnote disclosure is required and is included in Note 4 below.

Note 2. Earnings Per Share

The following table sets forth the calculation of earnings per share:

	Three Months Ended December 31	
	2005	2004
	(in thousands except per-share data)	
Net income	\$ 8,040	\$ 6,632
Weighted average shares outstanding	11,428	11,279
Basic earnings per share	\$ 0.70	\$ 0.59
Weighted average shares outstanding	11,428	11,279
Plus: Issued on assumed exercise of stock options	2	13
Weighted average shares outstanding assuming dilution	11,430	11,292
Diluted earnings per share	\$ 0.70	\$ 0.59

Note 3. Retirement Plan Information

The following table sets forth the components of net periodic benefit costs recognized in the three-month periods ended December 31, 2005 and 2004:

Net Periodic Benefits Cost

	Three Months Ended	
	Dec 31, 2005	Dec 31, 2004
	(Dollars in Thousands)	
DEFINED BENEFIT PENSION PLANS		
Service cost	\$ 216	\$ 197
Interest cost	965	961
Expected return on plan assets	(1,101)	(1,041)
Recognized gains or losses	421	386
Prior service cost	38	46
Net Periodic Benefit Cost Recognized	\$ 539	\$ 549
POSTRETIREMENT BENEFITS OTHER THAN PENSIONS		
Service cost	\$ 28	\$ 35
Interest cost	164	275
Expected return on plan assets	(219)	(211)
Recognized gains or losses	181	187
Prior service cost	(615)	(330)
Net Periodic Benefit Cost Recognized	\$ (461)	\$ (44)
DEFINED CONTRIBUTION PENSION PLAN		
Net Periodic Benefit Cost Recognized	\$ 205	\$ 243

Retirement Plan Funding

Edgar Filing: CASCADE NATURAL GAS CORP - Form 10-Q

For the three months ended December 31, 2005, \$630,000 of contributions have been made to the Company's defined benefit pension plans. The Company presently anticipates contributing an additional \$2,690,000 to fund its pension plans for a total of \$3,320,000 in fiscal 2006.

Note 4. Share-Based Payment

In the first quarter of fiscal 2006, the Company adopted Statement of Financial Accounting Standards No. 123 (revised 2004), (FAS 123(R)), *Share-Based Payment*. See Note 1 above. During the quarter, the Company did not have any share-based payment transactions. Following are disclosures under FAS 123(R) for share-based payment arrangements that were in effect during the quarters ended December 31, 2005 and 2004.

Under the Company's 2000 Director Stock Award Plan, each non-employee director is awarded 500 shares of the Company's common stock annually. During the quarters ended December 31, 2005 and December 31, 2004, the Company recognized \$23,000 and \$22,000 as expense under this plan. The value of the stock granted under this plan is based on the market value on the date of the award.

Under the Company's 1998 Stock Incentive Plan, there are 28,233 stock options granted in 2001, exercisable at \$18.565, and 44,000 stock options granted in 2002, exercisable at \$20.84. The 2001 options expire in 2006, and the 2002 options expire in 2012. All options are fully vested. When the options were

granted and during the vesting periods, the Company applied the intrinsic value method under Accounting Principles Board (APB) Opinion 25, and no expense has been recognized.

The Company's employment contracts with its Chief Executive Officer (CEO) and its Chief Financial Officer (CFO) contain grants of restricted stock. Under the CEO grant, 5,000 shares are restricted until the CEO completes one year of employment, and another 5,000 shares are restricted until he completes two years of employment. Under the CFO grant, 5,000 shares are restricted until he completes one year of employment. During this period, each executive is restricted from selling his shares. The value of the shares granted was based on the market value as of the grant date. During the quarter ended December 31, 2005, \$62,000 was recognized as compensation expense. None was recognized in the quarter ended December 31, 2004.

Note 5. Commitments and Contingencies

Unregistered Shares of Common Stock Under DRIP

The Company determined in April 2005 that the number of shares of its common stock issued pursuant to the Company's Automatic Dividend Reinvestment Plan (the DRIP) had exceeded the number of shares previously registered for such purpose under the Securities Act of 1933, as amended (the Securities Act). As a result, the Company may have failed to comply with the registration or qualification requirements of federal and applicable state securities laws with respect to shares issued under the DRIP from August 2003 to April 2005.

The Company has evaluated the impact of the issuance of unregistered shares on the DRIP participants affected and has considered whether any actions, including a formal rescission offer to the purchasers of the unregistered shares, should be taken to rectify this oversight. The estimated costs of conducting a rescission offer as compared to the potential for financial benefit to participants in the DRIP indicate that a rescission offer may not be in the best interests of the Company or its shareholders, including the participants in the DRIP. None of the DRIP participants involved has asked the Company to repurchase any of the unregistered shares, and the Company considers it unlikely that it will be required to do so. However, if the Company were required to repurchase all of the unregistered shares sold since December 31, 2004 (approximately the period remaining within the one-year statute of limitations applicable to sales of unregistered shares under the Securities Act), cash of approximately \$393,000 would be used to retire approximately 19,131 shares.

Environmental Matters

There are two claims against the Company for cleanup of alleged environmental contamination related to manufactured gas plant sites previously operated by companies that were subsequently merged into the Company.

The first claim was received in 1995 and relates to a site in Oregon. An investigation has shown that soil and groundwater contamination exists at the site. There are parties in addition to the Company that are potentially liable for cleanup of the contamination. Some of these other parties have shared in the costs expended to date to investigate the site, and it is expected that these and other parties will share in the cleanup costs. Several alternatives for remediation of the site have been identified, with preliminary estimates for cleanup ranging from approximately \$500,000 to \$11,000,000. It is not known at this time what share of the cleanup costs will actually be borne by Cascade.

The second claim was received in 1997 and relates to a site in Washington. An investigation has determined that there is evidence of contamination at the site, but there is also evidence that other property owners may have contributed to the contamination. There is currently not enough information available to estimate the potential liability associated with this claim, but the Company and other parties may become more involved in investigations of the nature and extent of contamination and possible remediation of the site as increased interest has been expressed concerning its potential for redevelopment.

Management has recently completed a review of the Company's insurance coverage and believes it has adequate insurance to cover costs of the above two claims. In the event the insurance proceeds do not completely cover the costs, management intends to seek recovery from its customers through increased rates. There is precedent for such recovery through increased rates, as both the Washington Utilities and Transportation Commission (WUTC) and the Oregon Public Utilities Commission (OPUC) have previously allowed regulated utilities to increase customer rates to cover similar costs.

Litigation and Other Contingencies

Various lawsuits, claims, and contingent liabilities may arise from time to time from the conduct of the Company's business. No other claims now pending, in the opinion of management, are expected to have a material effect on the Company's financial position, results of operations, cash flows, or liquidity.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following is management's assessment of the Company's financial condition and a discussion of the principal factors that affected consolidated results of operations and cash flows for the three-month periods ended December 31, 2005 and 2004.

OVERVIEW

The Company is a local distribution company (LDC) serving approximately 235,000 customers in the States of Washington and Oregon. Its service area consists primarily of relatively small cities and rural communities rather than larger urban areas. The Company's primary source of revenue and operating margin is the distribution of natural gas to end-use residential, commercial, industrial, and institutional customers. Revenues are also derived from providing gas management and other services to some of its large industrial and commercial customers. The Company's rates and practices are regulated by the Washington Utilities and Transportation Commission (WUTC) and the Oregon Public Utility Commission (OPUC).

Key elements of the Company's strategy:

Remain focused on the natural gas distribution business.

Pursue appropriate regulatory treatment, including initiatives to decouple the Company's earnings from weather fluctuations and changing customer consumption patterns, and remove other regulatory impediments to effective management of the business.

Economic expansion of its customer base by prudently managing capital expenditures and ensuring new customers provide sufficient margins for an appropriate return on the new investment required to acquire the customers.

Continue to focus on operational efficiencies.

Generate earnings and manage cash flow to maintain and strengthen the Company's ability to attract the funding needed to reliably serve new and existing customers.

Opportunities and Challenges

The Company operates in a diverse service territory over a wide geographic area relative to the Company's overall size and number of customers. The economies of various parts of the service area are supported by a variety of industries and are affected by the conditions that impact those industries. Management believes there are growth opportunities in the Company's service area, especially in the residential and commercial segments. Factors contributing to these opportunities include low market penetration in many of the towns served, and general population growth in the service area, including some areas of rapid growth.

Overall revenues and margins are negatively impacted by higher efficiency in new home and commercial building construction, higher efficiency in gas-burning equipment, and customers taking additional measures to reduce energy usage. The increasing cost of energy in recent years, including the wholesale

cost of natural gas, continues to encourage such measures. However, the Company continues to believe that energy efficiency and conservation are the most viable near-term tactics for reducing customer bills and influencing wholesale natural gas prices. They also form a vital strategy for stabilizing the cost of gas over the long term. The traditional regulatory establishment of rates ties the recovery of cost to volumetric sales. This traditional rate design creates a financial disincentive for utilities to promote conservation. The Company is working with regulators and other stakeholders in each state to develop an acceptable decoupling mechanism that will enable the Company to promote conservation while still recovering its operating costs and earning a fair return on its invested capital. Similar approaches have been implemented in many states and are endorsed by a variety of organizations, including the recent endorsement by the National Association of Regulated Utility Commissions. The results of such rate requests and other initiatives for regulatory relief are subject to significant uncertainties.

The Company earns approximately one third of its operating margin from industrial and electric generation customers. Loss of major industrial customers, or unfavorable conditions affecting an industry segment, would have a detrimental impact on the Company's earnings. Many external factors over which the Company has no control can significantly impact the amount of gas consumed by industrial and electric generation customers and, consequently, the margins earned by the Company.

Revenues and margins from the Company's residential and small commercial customers are highly weather-sensitive. In a cold year, the Company's earnings are boosted by the effects of the weather, and conversely in a warm year, the Company's earnings suffer. Peak requirements also drive the need to reinforce our systems (i.e., increase capacity). Our operations group considers innovative approaches such as temporarily utilizing mobile gas supply rather than making large investments in long-term capacity increases which may not be fully utilized.

Prospects for continuing strong residential and commercial customer growth are excellent. The pace of new home and commercial construction remains steady in communities served by the Company. Good potential also exists for converting homes and businesses located on or near the Company's current lines to gas from other fuels, as well as for expanding the system into adjacent areas. Customer count growth in this sector has been about double the average of U.S. gas utilities.

Our customer service call center organization recently voted to accept union representation. The Company plans to attempt to negotiate an agreement that will support our effort to cost-effectively provide superior customer service. The timing and results of negotiations are uncertain.

The contract with the union representing our service mechanics and construction staff expires on April 1, 2006. Again, we plan to attempt to negotiate an agreement that supports superior and cost-effective customer service. We anticipate that negotiations will be concluded by the contract expiration date of April 1, 2006.

We continue to pursue operating efficiencies and cost reductions. During fiscal 2004, we completed the implementation of automated meter reading capability covering our entire service area. This reduced our staffing needs by 27 full-time equivalent positions. During fiscal 2005, the centralization of our customer service activities and other organizational changes, enabled by a variety of other improvements, reduced our staffing from 428 to 375, more than a 12% reduction. Our current organization is able to service more customers at a lower cost than in prior years. Changes completed during fiscal 2005 alone resulted in improving our customer-per-employee ratio from 500 to 600. We continue to look for additional operating improvements.

We carefully analyze the economics of our spending to support growth. When justified under our tariffs, we work with developers, business owners and residents to share certain construction costs to assure a fair return to the Company. Non-revenue-generating spending is also managed to assure that we use the most economically attractive solutions while providing for a safe and reliable system. Improvements implemented during the current quarter have contributed to an average cost per service line reduction of 12%, while the number of new meters

installed rose slightly. These changes, combined with a reduction in non-revenue- generating initiatives as compared to a year ago, are expected to result in a significant reduction in capital spending over the current fiscal year.

Management continuously seeks improvement opportunities in all areas. Our discussion above covering regulatory change, labor relations, operating practices, our organization and our investment to maintain and expand our gas delivery system are examples. To assist the Company in evaluating all available options to maximize shareholder value, the Company has retained J.P. Morgan Securities Inc. to provide strategic and financial advice as well as regulatory support. The Company is currently finalizing its rate case filing, including its Conservation Alliance Plan (decoupling), for its Washington State operations and expects to file before the end of the second fiscal quarter.

RESULTS OF OPERATIONS

Edgar Filing: CASCADE NATURAL GAS CORP - Form 10-Q

The Company's net income was \$8,040,000, or \$0.70 per share, basic and diluted, for the fiscal 2006 first quarter (quarter ended December 31, 2005), compared to \$6,632,000, or \$0.59 per share, basic and diluted, for the quarter ended December 31, 2004. The largest factors influencing the quarterly comparisons were:

Increase in residential and commercial per-customer gas consumption: \$0.08 per share

Increase in margin from new residential and commercial customers: \$0.06 per share

Reduction in labor expense: \$0.04 per share

Reduction in employee benefits expense: \$0.03 per share

Factors mitigating the quarterly earnings improvement include:

Accrual of incentive compensation: (\$0.04) per share

Change in regulatory methodology affecting allocation of gas cost between quarters: (\$0.03) per share

Operating Margin

Operating margins by customer category for the first quarter of fiscal years 2006 and 2005 are set forth in the following tables:

Residential and Commercial Margin

	First Quarter of Fiscal		Percent
	2006	2005	Change
	(dollars in thousands)		
Degree Days			
Actual	2,250	1,945	15.7%
5-Year Average	2,106	2,091	
Average Number of Customers Billed			
Residential	201,204	191,100	5.3%
Commercial	30,586	29,840	2.5%
Average Therm Usage per Customer			
Residential	274	251	9.2%
Commercial	1,325	1,161	14.1%
Operating Margin			
Residential	\$ 15,469	\$ 14,224	8.8%
Commercial	\$ 7,888	\$ 7,461	5.7%

Margin from sales to residential and commercial customers increased by \$1,672,000 on an aggregate basis, and the net increase was influenced by three primary factors. An overall increase of 10,850 in the average number of residential and commercial customers billed, assuming the same average consumption per customer as last year, contributed \$1,069,000 in additional margin. The combined growth rate for

residential and commercial customers was 4.9%, more than two times the national average for natural gas distribution companies. Additionally, the increase in average gas usage per customer added \$1,420,000 in margin. The primary use of gas by residential customers is for space and water heating; therefore, average consumption per customer is very sensitive to weather, particularly during the Company's first and second fiscal quarters. Consumption by commercial customers is also sensitive to weather. The sensitivity is more difficult to isolate and measure than for residential customers because of a variety of uses in addition to space and water heating.

Partially offsetting the above increases was a \$535,000 reduction in the comparison of first quarter margins, which resulted from a change in how we recognize pipeline demand charges. This change was driven by the Company's October 1, 2005 Purchase Gas Adjustment (PGA) filing in Oregon. The constant is that the cost of pipeline demand charges, which are relatively flat, is recovered in monthly billings based on volume. Thus, we collect substantially more during our two winter quarters, which is offset during our summer quarters. Until the first quarter of fiscal 2006, the Company recorded the collections as revenues when billable, and the costs as incurred, which resulted in a lift in the prior first quarter's reported margins of the above amount. With the recent change, we recognize pipeline demand cost at a level to match its recovery each period, and any over or under collection flows to or from the deferred gas cost balance. The impact has been to reduce the stated increase in quarterly margin due to the margin lift of a year ago. This change is not expected to have an impact on full-year earnings.

Industrial and Other Margin

	First Quarter of Fiscal		Percent
	2006	2005	Change
	(dollars in thousands)		
Average Number of Customers			
Electric Generation	12	14	-14.3%
Industrial	702	736	-4.6%
	714	750	-4.8%
Therms Delivered (thousands)			
Electric Generation	121,189	117,365	3.3%
Industrial	109,207	110,414	-1.1%
	230,396	227,779	1.1%
Operating Margin (\$ thousands)			
Electric Generation	\$ 2,267	\$ 2,007	13.0%
Industrial	5,135	5,307	-3.2%
Gas Management Services	337	391	-13.8%
Mark-to-Market Valuations	(579)	(668)	-13.3%
Other	274	200	37.0%
	\$ 7,434	\$ 7,237	2.7%

The increase in margin from electric generation customers was equally split between the recognition of a settlement involving an inactive power plant and greater gas consumption by other electric generation customers in response to cooler December weather. Looking ahead, gas usage by generation customers will continue to depend on regional demand for power, availability of hydro resources, and the relationship between the market price of electricity and the cost of gas.

Cost of Operations

Cost of Operations (operating expense, depreciation and amortization, and property and miscellaneous taxes) was down by \$542,000, compared to the first quarter of fiscal year 2005. Management initiatives resulted in \$1.6 million in reduced quarterly operating expenses. Last fall's reduction in force, combined with other reduction opportunities and a focus on managing overtime, reduced direct labor costs by \$638,000.

Edgar Filing: CASCADE NATURAL GAS CORP - Form 10-Q

Outsourcing our retiree medical obligations to an insurance company contributed toward the \$617,000 in reduced benefit costs. Another \$356,000 in year-to-year cost reductions was achieved in various corporate and administrative areas. These operating cost savings were partially offset by incentive

compensation accruals totaling \$680,000. Depreciation and amortization increased \$209,000, consistent with capital spending over the most recent four quarters. We also increased bad-debt expense by \$180,000 in anticipation of potential collection issues due to recent gas cost increases.

LIQUIDITY AND CAPITAL RESOURCES

The seasonal nature of the Company's business creates short-term cash requirements to finance customer receivables, deferred gas costs and other business needs. To provide working capital for these requirements, the Company has a \$60,000,000 bank revolving credit commitment. This agreement has a variable commitment fee and a term that expires in October 2007. The Company also has a \$10,000,000 uncommitted line of credit. As of December 31, 2005, there was \$18,900,000 outstanding under these credit lines.

Due to the nature of the Company's business, which is characterized by predictable payments from a stable customer base, and our expectations that capital spending will be reduced from the last few years, we expect to have limited need for additional capital during fiscal year 2006. For this reason, management believes it has adequate liquidity and borrowing lines to meet our anticipated needs and estimates that cash flow will be sufficient to support operations, fund capital spending, and pay dividends at their current level.

Operating Activities

Edgar Filing: CASCADE NATURAL GAS CORP - Form 10-Q

In spite of improved net income, cash flow generated from operating activities declined \$3,587,000 compared to the first quarter of fiscal 2005. The largest single contributing factor was receivables growth reflecting higher gas costs. This was partially offset with a decline in prepaid expenses, primarily due to a reduction in prepaid income taxes.

-

Investing Activities

Capital spending during the quarter was \$3.8 million compared to \$7.8 million in the first quarter of fiscal year 2005. Part of the difference was due to \$1.0 million relating to the completed AMR and call center centralization projects, and \$1.4 million of one-time specific system reinforcement expenditures, in the first quarter of fiscal year 2005. The remaining \$1.6 million reduction is attributable to the implementation of a new investment evaluation process to assure that all capital spending provides an adequate return or is required for safety or regulatory compliance. Our current expectation is that we will end the year at or below our fiscal 2006 capital budget of \$22.0 million.

Financing Activities

Other than the payment of dividends, the Company's primary financing activity during the first quarter of fiscal 2006 was the \$6,400,000 net increase in short-term debt to provide seasonal working capital required by the growth in customer receivables.

CRITICAL ACCOUNTING POLICIES

The Company's financial statements are prepared in accordance with accounting principles generally accepted in the United States of America (GAAP). In following GAAP, management exercises judgment in selection and application of accounting principles. Management considers critical accounting policies to be those where different assumptions regarding application could result in material differences in financial statements. The Company's critical accounting policies were described in its Annual Report on Form 10-K for the year ended September 30, 2005, under Part II, Item 7, and have not changed significantly since that report.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

The Company has evaluated its risk related to financial instruments whose values are subject to market sensitivity. The Company has fixed-rate debt obligations but does not currently have derivative financial instruments subject to interest rate risk. The Company makes interest and principal payments on these

obligations in the normal course of its business and may redeem its debt obligations prior to normal maturities if warranted by market conditions.

The Company's natural gas purchase commodity prices are subject to fluctuations resulting from weather, congestion on interstate pipelines, and other unpredictable factors. The Company's Purchased Gas Cost Adjustment (PGA) mechanisms assure the recovery in customer rates of prudently incurred wholesale cost of natural gas purchased for the core market. The Company primarily utilizes financial derivatives, and to a lesser extent, fixed price physical supply contracts to manage risk associated with wholesale costs of natural gas purchased for customers.

With respect to derivative arrangements covering natural gas supplies for core customers, periodic changes in fair market value are recorded in regulatory asset or regulatory liability accounts, pursuant to authority granted by the WUTC and OPUC, recognizing that settlements of these arrangements will be recovered through the PGA mechanism.

For derivative arrangements related to supplies for non-core customers, which are not covered by a PGA mechanism, periodic changes in fair market value are recognized in earnings or in Other Comprehensive Income.

Item 4. Controls and Procedures

The Company maintains controls and procedures designed to provide reasonable assurance that required disclosure information in the reports the Company files or submits under the Securities Exchange Act of 1934, as amended, is recorded, processed, summarized and reported within the time period specified in the rules and forms of the Securities and Exchange Commission. Based upon their evaluation of those controls and procedures as of the end of the quarter covered by this report, the Chief Executive Officer and Chief Financial Officer of the Company concluded that the Company's disclosure controls and procedures were effective. There were no changes in internal control over financial reporting that occurred during the quarter covered by this report that have materially affected, or are reasonably likely to affect, the Company's internal controls over financial reporting.

FORWARD-LOOKING STATEMENTS

The Company's discussion in this report, or in any information incorporated herein by reference, may contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. All statements, other than statements of historical facts, are forward-looking statements, including statements concerning plans, objectives, goals, strategies, and future events or performance. When used in Company documents or oral presentations, the words "anticipate", "believe", "estimate", "expect", "objective", "projection", "forecast", "goal", or other words are intended to identify forward-looking statements.

These forward-looking statements reflect the Company's current expectations, beliefs and projections about future events that we believe may affect the Company's business, financial condition and results of operations, and are expressed in good faith and are believed to have a reasonable basis. However, each such forward-looking statement involves risks, uncertainties and assumptions, and is qualified in its entirety by reference to the following important factors, among others, that could cause the Company's actual results to differ materially from those projected in such forward-looking statements:

prevailing state and federal governmental policies and regulatory actions, including those of the Washington Utilities and Transportation Commission, the Oregon Public Utility Commission, and the U.S. Department of Transportation's Office of Pipeline Safety, with respect to allowed rates of return, industry and rate structure, purchased gas cost and investment recovery, acquisitions and dispositions of assets and facilities, operation and construction of plant facilities, the maintenance of pipeline integrity, and present or prospective wholesale and retail competition;

weather conditions and other natural phenomena;

unanticipated population growth or decline, and changes in market demand caused by changes in demographic or customer consumption patterns;

changes in and compliance with environmental and safety laws, regulations and policies, including environmental cleanup requirements;

competition from alternative forms of energy and other sellers of energy;

increasing competition brought on by deregulation initiatives at the federal and state regulatory levels, as well as consolidation in the energy industry;

the potential loss of large volume industrial customers due to bypass or the shift by such customers to special competitive contracts at lower per-unit margins;

risks, including creditworthiness, relating to performance issues with customers and suppliers;

risks resulting from uninsured damage to the Company's property, intentional or otherwise, or from acts of terrorism;

unanticipated changes that may affect the Company's liquidity or access to capital markets;

unanticipated changes in interest rates or in rates of inflation;

economic factors that could cause a severe downturn in certain key industries, thus affecting demand for natural gas;

unanticipated changes in operating expenses and capital expenditures;

unanticipated changes in capital market conditions, including their impact on future expenses and liabilities relating to employee benefit plans;

potential inability to obtain permits, rights of way, easements, leases, or other interests or necessary authority to construct pipelines, or complete other system expansions;

changes in the availability and price of natural gas; and

legal and administrative proceedings and settlements.

In light of these risks, uncertainties and assumptions, the forward-looking events and circumstances discussed in this report, or in any information incorporated herein by reference, may not occur and actual results could differ materially from those anticipated or implied in the forward-looking statements. All subsequent forward-looking statements, whether written or oral and whether made by or on behalf of the Company, also are expressly qualified by these cautionary statements.

Any forward-looking statement by the Company is made only as of the date on which such statement is made. The Company undertakes no obligation to update any forward-looking statement to reflect events or circumstances after the date on which the statement is made or to reflect the occurrence of any unanticipated events. New factors emerge from time to time, and the Company is not able to predict all such factors, nor can it assess the impact of each such factor or the extent to which such factors may cause results to differ materially from those contained in any forward-looking statement.

PART II. Other Information

Item 6. Exhibits

Edgar Filing: CASCADE NATURAL GAS CORP - Form 10-Q

No	Description
12	Computation of Ratio of Earnings to Fixed Charges
31	Certifications Accompanying Periodic Report Pursuant to Section 302 of the Sarbanes-Oxley Act of 2002
32	Certification Pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002

SIGNATURE

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.
