

BALTIMORE GAS & ELECTRIC CO
Form 10-K
February 27, 2007

UNITED STATES SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

FORM 10-K

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(D) OF
THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended **DECEMBER 31, 2006**

Commission
file number
1-12869
1-1910

Exact name of registrant as specified in its charter

CONSTELLATION ENERGY GROUP, INC.
BALTIMORE GAS AND ELECTRIC COMPANY

IRS Employer
Identification No.
52-1964611
52-0280210

MARYLAND
(States of incorporation)
750 E. PRATT STREET BALTIMORE, MARYLAND 21202
(Address of principal executive offices) (Zip Code)
410-783-2800
(Registrants telephone number, including area code)

SECURITIES REGISTERED PURSUANT TO SECTION 12(B) OF THE ACT:

Title of each class	Name of each exchange on which registered
Constellation Energy Group, Inc. Common Stock Without Par Value	} New York Stock Exchange, Inc. Chicago Stock Exchange, Inc.
6.20% Trust Preferred Securities (\$25 liquidation amount per preferred security) issued by BGE Capital Trust II, fully and unconditionally guaranteed, based on several obligations, by Baltimore Gas and Electric Company	} New York Stock Exchange, Inc.

SECURITIES REGISTERED PURSUANT TO SECTION 12(G) OF THE ACT:

Not Applicable

Indicate by check mark if Constellation Energy Group, Inc. is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if Baltimore Gas and Electric Company is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if Constellation Energy Group, Inc. is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark if Baltimore Gas and Electric Company is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrants (1) have filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months, and (2) have been subject to such filing requirements for the past 90 days. Yes No

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrants' knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. x

Indicate by check mark whether Constellation Energy Group, Inc. is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of accelerated filer and large accelerated filer in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer x Accelerated filer o Non-accelerated filer o

Indicate by check mark whether Baltimore Gas and Electric Company is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of accelerated filer and large accelerated filer in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer o Accelerated filer o Non-accelerated filer x

Indicate by check mark whether Constellation Energy Group, Inc. is a shell company (as defined in Rule 12b-2 of the Exchange Act) Yes o No x

Indicate by check mark whether Baltimore Gas and Electric Company is a shell company (as defined in Rule 12b-2 of the Exchange Act) Yes o No x

Aggregate market value of Constellation Energy Group, Inc. Common Stock, without par value, held by non-affiliates as of June 30, 2006 was approximately \$9,699,558,195 based upon New York Stock Exchange composite transaction closing price.

**CONSTELLATION ENERGY GROUP, INC. COMMON STOCK, WITHOUT PAR VALUE
180,679,592 SHARES OUTSTANDING ON JANUARY 31, 2007.**

DOCUMENTS INCORPORATED BY REFERENCE

Part of Form 10-K	Document Incorporated by Reference
III	Certain sections of the Proxy Statement for the 2007 Annual Meeting of Shareholders for Constellation Energy Group, Inc.

Baltimore Gas and Electric Company meets the conditions set forth in General Instruction I(1)(a) and (b) of Form 10-K and is therefore filing this Form in the reduced disclosure format.

Forward Looking Statements

We make statements in this report that are considered forward looking statements within the meaning of the Securities Exchange Act of 1934. Sometimes these statements will contain words such as believes, anticipates, expects, intends, plans, and other similar words. We also disclose non-historical information that represents management's expectations, which are based on numerous assumptions. These statements and projections are not guarantees of our future performance and are subject to risks, uncertainties, and other important factors that could cause our actual performance or achievements to be materially different from those we project. These risks, uncertainties, and factors include, but are not limited to:

- ◆ the timing and extent of changes in commodity prices and volatilities for energy and energy related products including coal, natural gas, oil, electricity, nuclear fuel, freight, and emission allowances,
- ◆ the liquidity and competitiveness of wholesale markets for energy commodities,
- ◆ the effect of weather and general economic and business conditions on energy supply, demand, and prices,
- ◆ the ability to attract and retain customers in our competitive supply activities and to adequately forecast their energy usage,
- ◆ the timing and extent of deregulation of, and competition in, the energy markets, and the rules and regulations adopted on a transitional basis in those markets,
- ◆ uncertainties associated with estimating natural gas reserves, developing properties, and extracting natural gas,
- ◆ regulatory or legislative developments that affect deregulation, transmission or distribution rates and revenues, demand for energy, or increases in costs, including costs related to nuclear power plants, safety, or environmental compliance,
- ◆ the inability of Baltimore Gas and Electric Company (BGE) to recover all its costs associated with providing customers service,
- ◆ the conditions of the capital markets, interest rates, availability of credit, liquidity, and general economic conditions, as well as Constellation Energy Group's (Constellation Energy) and BGE's ability to maintain their current credit ratings,
- ◆ the effectiveness of Constellation Energy's and BGE's risk management policies and procedures and the ability and willingness of our counterparties to satisfy their financial and performance commitments,
- ◆ operational factors affecting commercial operations of our generating facilities (including nuclear facilities) and BGE's transmission and distribution facilities, including catastrophic weather-related damages, unscheduled outages or repairs, unanticipated changes in fuel costs or availability, unavailability of coal or gas transportation or electric transmission services, workforce issues, terrorism, liabilities associated with catastrophic events, and other events beyond our control,
- ◆ the actual outcome of uncertainties associated with assumptions and estimates using judgment when applying critical accounting policies and preparing financial statements, including factors that are estimated in determining the fair value of energy contracts, such as the ability to obtain market prices and, in the absence of verifiable market prices, the appropriateness of models and model inputs (including, but not limited to, estimated contractual load obligations, unit availability, forward commodity prices, interest rates, correlation and volatility factors),
- ◆ changes in accounting principles or practices,

- ◆ losses on the sale or write down of assets due to impairment events or changes in management intent with regard to either holding or selling certain assets,
- ◆ the ability to successfully identify and complete acquisitions and sales of businesses and assets, and
- ◆ cost and other effects of legal and administrative proceedings that may not be covered by insurance, including environmental liabilities.

Given these uncertainties, you should not place undue reliance on these forward looking statements. Please see the other sections of this report and our other periodic reports filed with the Securities and Exchange Commission (SEC) for more information on these factors. These forward looking statements represent our estimates and assumptions only as of the date of this report.

Changes may occur after that date, and neither Constellation Energy nor BGE assume responsibility to update these forward looking statements.

PART I

Item 1. Business

Overview

Constellation Energy is an energy company that includes a merchant energy business and BGE, a regulated electric and gas public utility in central Maryland.

Constellation Energy was incorporated in Maryland on September 25, 1995. On April 30, 1999, Constellation Energy became the holding company for BGE and its subsidiaries. References in this report to we and our are to Constellation Energy and its subsidiaries, collectively. References in this report to the regulated business(es) are to BGE.

Our merchant energy business is a competitive provider of energy solutions for a variety of customers. It has electric generation assets located in various regions of the United States and provides energy solutions to meet customers' needs. Our merchant energy business focuses on serving the energy and capacity requirements (load-serving) of, and providing other energy products and risk management services, for various customers.

Our merchant energy business includes:

- ◆ a generation operation that owns, operates, and maintains fossil, nuclear, and hydroelectric generating facilities and holds interests in qualifying facilities, fuel processing facilities and power projects in the United States,
- ◆ a wholesale marketing, risk management, and trading operation that primarily provides energy products and services to distribution utilities, power generators, and other wholesale customers,
- ◆ an electric and natural gas retail operation that provides energy products and services to commercial, industrial, and governmental customers, and
- ◆ a generation operations and maintenance services operation.

BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of ten counties in central Maryland. BGE was incorporated in Maryland in 1906.

Our other nonregulated businesses:

- ◆ design, construct, and operate heating, cooling, and cogeneration facilities, and provide various energy-related services, including energy consulting, for commercial, industrial, and governmental customers throughout North America, and
- ◆ provide home improvements, service heating, air conditioning, plumbing, electrical, and indoor air quality systems, and provide natural gas to residential customers in central Maryland.

On October 24, 2006, Constellation Energy and FPL Group, Inc. (FPL Group) agreed to terminate the Agreement and Plan of Merger the parties entered into on December 18, 2005. For additional information related to the merger termination, see *Note 15 to Consolidated Financial Statements*. For a discussion of other recent events that have impacted us, our strategy, and the seasonality of our business, please refer to *Item 7. Management's Discussion and Analysis* section.

Constellation Energy maintains a website at constellation.com where copies of our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and any amendments may be obtained free of charge. These reports are posted on our website the same day they are filed with the SEC. The SEC maintains a website (sec.gov), where copies of our filings may be obtained free of charge. The website address for BGE is bge.com. These website addresses are inactive textual references, and the contents of these websites are not part of this Form 10-K.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

In addition, the website for Constellation Energy includes copies of our Corporate Governance Guidelines, Principles of Business Integrity, Corporate Compliance Program and Insider Trading Policy, and the charters of the Audit, Compensation and Nominating, and Corporate Governance Committees of the Board of Directors. Copies of each of these documents may be printed from our website or may be obtained from Constellation Energy upon written request to the Corporate Secretary.

The Principles of Business Integrity is a code of ethics that applies to all of our directors, officers, and employees, including the chief executive officer, chief financial officer, and chief accounting officer. We will post any amendments to, or waivers from, the Principles of Business Integrity applicable to our chief executive officer, chief financial officer, or chief accounting officer on our website.

Operating Segments

The percentages of revenues, net income, and assets attributable to our operating segments are shown in the tables below. We present information about our operating segments, including certain other items, in *Note 3 to Consolidated Financial Statements*.

	Unaffiliated Revenues			
	Merchant Energy	Regulated Electric	Regulated Gas	Other Nonregulated
2006	83 %	11 %	5 %	1 %
2005	81	12	6	1
2004	76	16	6	2

	Net Income (1)			
	Merchant Energy	Regulated Electric	Regulated Gas	Other Nonregulated
2006	77 %	16 %	5 %	2 %
2005	67	28	5	(3)
2004	72	26	5	(3)

2

	Merchant Energy	Regulated Electric	Total Assets Regulated Gas	Other Nonregulated
	%	%	%	%
2006	75	17	6	2
2005	77	16	6	1
2004	71	20	7	2

Certain prior-year amounts have been reclassified to conform with the current year's presentation.

(1) *Excludes income from discontinued operations in 2006, 2005 and 2004 and cumulative effects of changes in accounting principles in 2005 as discussed in more detail in Item 8. Financial Statements and Supplementary Data.*

Merchant Energy Business

Introduction

Our merchant energy business integrates electric generation assets with the marketing and risk management of energy and energy-related commodities, allowing us to manage energy price risk over geographic regions and time.

Constellation Energy Commodities Group, our wholesale marketing, risk management, and trading operation, dispatches the energy from our generating facilities and from some facilities with which we have power purchase agreements, manages the risks associated with selling the output and purchasing non-nuclear fuels, and enters into transactions to meet customers' energy and risk management requirements. This operation also trades energy and energy-related commodities and deploys risk capital in the management of our portfolio in order to earn additional returns. Constellation NewEnergy, our electric and gas retail operation, provides electricity, natural gas, transportation, and other energy services to commercial, industrial, and governmental customers.

Constellation Generation Group, our merchant generation operation, oversees the ownership, operations, maintenance, and performance of our fossil, nuclear and renewable generation and fuel processing facilities. Our generation capacity supports our wholesale and retail operations by providing a source of reliable power supply. Constellation Generation Group also owns and operates a generation operations and maintenance services organization.

Our merchant energy business:

- ◆ provided approximately 34,650 megawatts (MW) of peak load in the aggregate to distribution utilities, municipalities, commercial, industrial, and governmental customers during 2006,
- ◆ provided approximately 355,000 million British Thermal Units (mmBTUs) of natural gas to commercial, industrial, and governmental customers during 2006,
- ◆ delivered 26.0 million tons of coal to international and domestic third-party customers and to our own fleet during 2006, and
- ◆ managed approximately 8,680 MW of generation capacity as of December 31, 2006.

We analyze the results of our merchant energy business as follows:

- ◆ **Mid-Atlantic Region** our fossil, nuclear, and hydroelectric generating facilities and load-serving activities in the PJM Interconnection (PJM) region. This also includes active portfolio management of generating assets and other physical and financial contractual arrangements, as well as other PJM competitive supply activities. In addition, due to the expiration of its power purchase agreement, beginning in June 2006 until its sale in December 2006, the results of our University Park generating facility are included with the Mid-Atlantic Region. University Park was previously

included in Plants with Power Purchase Agreements.

- ◆ **Plants with Power Purchase Agreements** our generating facilities outside the Mid-Atlantic Region with long-term power purchase agreements. As discussed in *Note 2 to Consolidated Financial Statements*, the sale of the High Desert facility resulted in a reclassification of its results to discontinued operations.
- ◆ **Wholesale Competitive Supply** our marketing, risk management, and trading operation that provides energy products and services primarily to distribution utilities, power generators, and other wholesale customers. We also provide global energy and related services and upstream and downstream natural gas services.
- ◆ **Retail Competitive Supply** our operation that provides electric and natural gas energy products and services to commercial, industrial, and governmental customers.
- ◆ **Other** our investments in qualifying facilities and domestic power projects and our generation operations and maintenance services.

In December 2006, we completed the sale of the following gas-fired plants owned by our merchant energy business:

Facility	Capacity (MW)	Unit Type	Location
High Desert	830	Combined Cycle	California
Rio Nogales	800	Combined Cycle	Texas
Holland	665	Combined Cycle	Illinois
University Park	300	Peaking	Illinois
Big Sandy	300	Peaking	West Virginia
Wolf Hills	250	Peaking	Virginia

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We discuss the sale of these gas-fired generating facilities in *Note 2 to Consolidated Financial Statements*.

We present details about our generating properties in *Item 2. Properties*.

Mid-Atlantic Region

We own 6,305 MW of fossil, nuclear, and hydroelectric generation capacity in the Mid-Atlantic Region. The output of these plants is managed by our wholesale marketing, risk management, and trading operation and is hedged through a combination of power sales to wholesale and retail market participants. Our merchant energy business meets the load-serving requirements of various contracts using the output from the Mid-Atlantic Region and from purchases in the wholesale market.

BGE transferred all of these facilities to our merchant energy generation subsidiaries on July 1, 2000 as a result of the implementation of electric customer choice and competition among suppliers in Maryland, except for the Handsome Lake facility that commenced operations in mid-2001. The assets transferred from BGE are subject to the lien of BGE's mortgage.

Our merchant energy business supplies BGE with a portion of its market-based standard offer service obligation. For 2006, the peak load supplied to BGE was approximately 3,490 MW.

Plants with Power Purchase Agreements

We own 2,134 MW of nuclear generation capacity with power purchase agreements for a significant portion of their output. Our facilities with power purchase agreements are the Nine Mile Point Nuclear Station (Nine Mile Point) and the R.E. Ginna Nuclear Plant (Ginna).

We own 100% of Nine Mile Point Unit 1 (620 MW) and 82% of Unit 2 (933 MW). The remaining interest in Nine Mile Point Unit 2 is owned by the Long Island Power Authority. Unit 1 entered service in 1969 and Unit 2 in 1988. Nine Mile Point is located within the New York Independent System Operator (NYISO) region.

We sell 90% of our share of Nine Mile Point's output to the former owners of the plant at an average price of nearly \$35 per megawatt-hour (MWH) under agreements that terminate between 2009 and 2011. The agreements are unit contingent (if the output is not available because the plant is not operating, there is no requirement to provide output from other sources). The remaining 10% of Nine Mile Point's output is managed by our wholesale marketing, risk management, and trading operation and sold into the wholesale market.

After termination of the power purchase agreements, a revenue sharing agreement with the former owners of the plant will begin and continue through 2021. Under this agreement, which applies only to our ownership percentage of Unit 2, a predetermined price is compared to the market price for electricity. If the market price exceeds the strike price, then 80% of this excess amount is shared with the former owners of the plant. The average strike price for the first year of the revenue sharing agreement is \$40.75 per MWH. The strike price increases two percent annually beginning in the second year of the revenue sharing agreement. The revenue sharing agreement is unit contingent and is based on the operation of the unit.

We exclusively operate Unit 2 under an operating agreement with the Long Island Power Authority. The Long Island Power Authority is responsible for 18% of the operating costs (and decommissioning costs) of Unit 2 and has representation on the Nine Mile Point Unit 2 management committee which provides certain oversight and review functions.

In October 2006, we received Nuclear Regulatory Commission (NRC) approval for license extension for both units at our Nine Mile Point nuclear facility. With the renewed licenses, we can continue to operate Unit 1 until 2029 and Unit 2 until 2046.

We own 100% of the Ginna nuclear facility. Ginna consists of a 581 MW reactor that entered service in 1970 and is licensed to operate until 2029. We sell up to 90% of the plant's output and capacity to the former owners for 10 years at an average price of \$44.00 per MWH under a long term unit contingent power purchase agreement. The remaining output is managed by our wholesale marketing, risk management, and trading operation and sold into the wholesale market. During the fourth quarter of 2006, we completed a planned outage at our Ginna nuclear facility, which included increasing the capacity of the plant from 498 MW to the current 581 MW. Based on the new capacity, beginning in 2007, we will sell approximately 80% of Ginna's output to the former owners.

Competitive Supply

We are a leading supplier of energy products and services to wholesale customers and retail commercial, industrial, and governmental customers. In 2006, our wholesale marketing, risk management, and trading operation provided approximately 17,950 peak MWs of wholesale

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

full requirements load-serving products. During 2006, our retail competitive supply activities served approximately 16,700 MW of peak load and approximately 355,000 mmBTUs of natural gas.

Wholesale and Retail Load-Serving Activities

Our wholesale marketing, risk management, and trading operation structures transactions that serve the full energy and capacity requirements of various customers outside the PJM region such as distribution utilities, municipalities, cooperatives, and retail aggregators that do not own sufficient generating capacity or in-house supply functions to meet their own load requirements.

4

Our retail competitive supply operation structures transactions to supply full energy and capacity requirements and provide natural gas, transportation, and other energy products and services to retail, commercial, industrial, and governmental customers.

Contracts with these customers generally extend from one to ten years, but some can be longer. To meet our customers' load-serving requirements, our merchant energy business obtains energy from various sources, including:

- ◆ bilateral power and natural gas purchase agreements with third parties,
- ◆ unit contingent purchases from generation companies,
- ◆ our generation assets,
- ◆ regional power pools,
- ◆ tolling contracts with generation companies, which provide us the right, but not the obligation, to purchase power at a price linked to the variable cost of production, including fuel, with terms that generally extend from several months to several years, but can be longer, and
- ◆ exchange traded electricity and natural gas contracts.

Portfolio Management and Trading

We continue to identify and pursue opportunities which can generate additional returns through portfolio management and trading activities within our business. These opportunities have increased due to the significant growth in scale of our competitive supply operations. In managing our portfolio, we may terminate, restructure, or acquire contracts. Such transactions are within the normal course of managing our portfolio and may materially impact the timing of our recognition of revenues, fuel and purchased energy expenses, and cash flows.

Our wholesale marketing, risk management, and trading operation actively uses energy and energy-related commodities in order to manage our portfolio of energy purchases and sales to customers through structured transactions. We use both derivative and nonderivative contracts in managing our portfolio of energy sales and purchase contracts. Generally, we expect to use both derivative and nonderivative contracts to hedge a majority of our portfolio over a three-year period in order to reduce volatility in our results. Although a substantial portion of our portfolio is hedged, we are able to identify opportunities to deploy risk capital to increase the value of our accrual positions, which we characterize as portfolio management.

We trade energy and energy-related commodities and deploy risk capital in the management of our portfolio in order to earn additional returns. These activities are managed through daily value at risk and stop loss limits and liquidity guidelines, and could have a material impact on our financial results. We discuss the impact of our trading activities and value at risk in more detail in *Item 7. Management's Discussion and Analysis*.

These activities involve the use of a variety of instruments, including:

- ◆ forward contracts (which commit us to purchase or sell energy commodities in the future),
- ◆ swap agreements (which require payments to or from counterparties based upon the difference between two prices for a predetermined contractual (notional) quantity),
- ◆ option contracts (which convey the right to buy or sell a commodity, financial instrument, or index at a predetermined price), and
- ◆ futures contracts (which are exchange traded standardized commitments to purchase or sell a commodity or financial instrument, or make a cash settlement, at a specified price and future date).

Active portfolio management allows our wholesale marketing, risk management, and trading operation to:

- ◆ manage and hedge its fixed-price energy purchase and sale commitments,
- ◆ provide fixed-price energy commitments to customers and suppliers,
- ◆ reduce exposure to the volatility of market prices, and
- ◆ hedge fuel requirements at our non-nuclear generation facilities.

Coal and International Services

Our wholesale marketing, risk management, and trading operation participates in global coal sourcing activities by providing coal and coal-related logistical services, for the variable or fixed supply needs of global customers. In 2006, we delivered 26.0 million tons of coal to global customers and to our own fleet. Additionally, we entered into power, natural gas, freight, and emissions transactions outside of the United States. We also include in our coal services the results from our synthetic fuel processing facility in South Carolina.

We will continue to evaluate new international opportunities, including expanding our coal sourcing, freight, and power, natural gas and emissions activities outside of the United States.

Natural Gas Services

Our wholesale marketing, risk management, and trading operation includes upstream (exploration and production) and downstream (transportation and storage) natural gas operations. Our upstream activities include the acquisition, development, and exploitation of natural gas properties. Our downstream activities include providing natural gas to various customers, including large utilities, industrial customers, power generators, wholesale marketers, and retail aggregators.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

In 2006 and 2005, we acquired working interests in gas producing fields. We discuss these acquisitions in more detail in *Note 15 to Consolidated Financial Statements*.

In November 2006, we completed the initial public offering of Constellation Energy Partners LLC (CEP), a limited liability company that we formed. CEP is principally engaged in the acquisition, development, and exploitation of natural gas properties. CEP's existing property is located in the Robinson's Bend Field in the Black Warrior Basin of Alabama. We continue to own 54% of CEP and as a result, we continue to consolidate CEP. We discuss the impact of this initial public offering on our financial results in more detail in *Note 2 to Consolidated Financial Statements*.

Other

We hold up to a 50% voting interest in 24 operating energy projects that consist of electric generation (primarily relying on alternative fuel sources), fuel processing, or fuel handling facilities. These generating projects are considered qualifying facilities under the Public Utility Regulatory Policies Act of 1978. Each electric generating plant sells its output to a local utility under long-term contracts.

We also provide operation and maintenance services, including testing and start-up, to owners of electric generating facilities.

UniStar Nuclear

In 2005, we formed UniStar Nuclear, LLC (UniStar), a joint enterprise with AREVA NP, Inc., to develop the business model for a standardized fleet of nuclear power plants based on an advanced design called the U.S. Evolutionary Power Reactor (U.S. EPR). UniStar provides the framework through which we can work with AREVA NP, Inc. to obtain design certification and all necessary approvals from the NRC to license, construct, own, and operate U.S. EPR plants.

UniStar also offers the business framework that could enable the development of future joint ventures with Constellation Energy, other energy companies, and interested parties. Those future joint ventures, in turn, would license, construct, own, and operate nuclear power plants as part of a standardized fleet. However, prior to identifying specific projects or committing to ordering new nuclear power plants, our financial commitment will be limited to the formation of the business platform and business development activities, including licensing and permit activities and securing access to long-lead materials such as heavy forgings needed for reactor pressure vessels and steam generators or turbine and generator parts.

Fuel Sources

Our power plants use diverse fuel sources. Our fuel mix based on capacity owned at December 31, 2006 and our generation based on actual output by fuel type in 2006 were as follows:

Fuel	Capacity Owned		Generation*	
Nuclear	45	%	52	%
Coal	32		30	
Natural Gas	7		15	
Oil	8			
Renewable and Alternative (1)	5		3	
Dual (2)	3			

* *Includes output from gas-fired plants until sale in December 2006.*

(1) *Includes solar, geothermal, hydro, waste coal and biomass.*

(2) *Switches between natural gas and oil.*

We discuss our risks associated with fuel in more detail in *Item 7. Management's Discussion and Analysis Market Risk*.

Nuclear

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

The output at our nuclear facilities over the past five years (including periods prior to our acquisition of Ginna in June 2004) is presented in the following table:

	Calvert Cliffs		Nine Mile Point		Ginna	
	MWH	Capacity Factor	MWH*	Capacity Factor	MWH	Capacity Factor
			<i>(MWH in millions)</i>			
2006	13.8	90 %	12.8	93 %	4.1	93 %
2005	14.7	97	12.7	93	4.0	93
2004	14.5	96	12.1	89	4.3	100
2003	13.7	93	12.2	90	3.9	90
2002	12.1	82	11.7	87	3.8	89

* represents our proportionate ownership interest

The supply of fuel for nuclear generating stations includes the:

- ◆ purchase of uranium (concentrates and uranium hexafluoride),
- ◆ conversion of uranium concentrates to uranium hexafluoride,
- ◆ enrichment of uranium hexafluoride, and
- ◆ fabrication of nuclear fuel assemblies.

Uranium and Conversion	We have commitments for sufficient quantities of uranium (concentrates and uranium hexafluoride) to meet 100% of our total requirements through 2010. Additionally, we have commitments covering approximately 95% of our requirements in 2011.
------------------------	---

6

Enrichment	We have commitments that provide 100% of our uranium enrichment requirements through 2010 and 75% of these requirements in 2011 and 2012. We have commitments that provide 50% of our uranium enrichment requirements from 2013 through 2020.
Fuel Assembly Fabrication	We have commitments for the fabrication of fuel assemblies for reloads required through 2013 for Nine Mile Point and Calvert Cliffs Nuclear Power Plant, Inc. (Calvert Cliffs), and through 2017 for Ginna.

The nuclear fuel markets are competitive, and although prices for uranium and conversion are increasing, we do not anticipate any significant problems in meeting our future requirements.

Storage of Spent Nuclear Fuel - Federal Facilities

One of the issues associated with the operation and decommissioning of nuclear generating facilities is disposal of spent nuclear fuel. There are no facilities for the reprocessing or permanent disposal of spent nuclear fuel currently in operation in the United States, and the NRC has not licensed any such facilities. The Nuclear Waste Policy Act of 1982 (NWPAA) required the federal government, through the Department of Energy (DOE), to develop a repository for the disposal of spent nuclear fuel and high-level radioactive waste.

As required by the NWPAA, we are a party to contracts with the DOE to provide for disposal of spent nuclear fuel from our nuclear generating plants. The NWPAA and our contracts with the DOE require payments to the DOE of one tenth of one cent (one mill) per kilowatt hour on nuclear electricity generated and sold to pay for the cost of long-term nuclear fuel storage and disposal. We continue to pay those fees into the DOE's Nuclear Waste Fund for our Calvert Cliffs, Ginna, and Nine Mile Point facilities. The NWPAA and our contracts with the DOE required the DOE to begin taking possession of spent nuclear fuel generated by nuclear generating units no later than January 31, 1998.

The DOE has stated that it may not meet that obligation until 2017 at the earliest. This delay has required that we undertake additional actions to provide on-site fuel storage at Calvert Cliffs, Ginna, and Nine Mile Point, including the installation of on-site dry fuel storage capacity at Calvert Cliffs, as described in more detail below. In 2004, complaints were filed against the federal government in the United States Court of Federal Claims seeking to recover damages caused by the DOE's failure to meet its contractual obligation to begin disposing of spent nuclear fuel by January 31, 1998. These cases are currently stayed, pending litigation in other related cases.

In connection with our purchase of Ginna, all of the former owner's rights and obligations related to recovery of damages for DOE's failure to meet its contractual obligations were assigned to us. However, we have an obligation to reimburse the former owner for up to \$10 million of any recovered damages for such claims.

Storage of Spent Nuclear Fuel - On-Site Facilities

Calvert Cliffs has a license from the NRC to operate an on-site independent spent fuel storage installation that expires in 2012. We have storage capacity at Calvert Cliffs that will accommodate spent fuel from operations through 2011. In addition, we can expand our temporary storage capacity at Calvert Cliffs to meet future requirements until approximately 2025. Nine Mile Point and Ginna are beginning initial planning studies for the potential development of independent spent fuel storage capacity. Nine Mile Point's Unit 1 has sufficient storage capacity within the plant until 2011. Nine Mile Point's Unit 2 has sufficient storage capacity within the plant until 2012. Ginna has sufficient storage capacity within the plant until 2010.

Cost for Decommissioning Uranium Enrichment Facilities

The Energy Policy Act of 1992 requires domestic nuclear utilities to contribute to a fund for decommissioning and decontaminating uranium enrichment facilities that had been operated by DOE. These contributions are generally payable over a 15-year period with escalation for inflation and are based upon the amount of uranium enriched by DOE for each utility through 1992. The 1992 Act provides that these costs are recoverable through utility service rates. BGE is solely responsible for these costs as they relate to Calvert Cliffs and made the last payment in 2006. The sellers of the Nine Mile Point plant and the Long Island Power Authority are responsible for the costs relating to the Nine Mile Point plant. The seller of Ginna is responsible for the costs related to that facility.

Cost for Decommissioning

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We are obligated to decommission our nuclear plants at the time these plants cease operation. Every two years, the NRC requires us to demonstrate reasonable assurance that funds will be available to decommission the sites. When BGE transferred all of its nuclear generating assets to our merchant energy business, it also transferred the trust fund established to pay for decommissioning Calvert Cliffs. At December 31, 2006, the Calvert Cliffs trust fund assets were \$420.6 million.

Under the Maryland Public Service Commission's (Maryland PSC) order regarding the deregulation of electric generation, BGE ratepayers must pay a total of \$520 million, in 1993 dollars adjusted for inflation, to decommission Calvert Cliffs through fixed annual collections. In 2006, BGE received approval from the Maryland PSC to continue annual customer collections of approximately \$18.7 million through December 31, 2016. BGE will be required to submit a filing to determine the level of customer contributions after December 31, 2016.

7

BGE is collecting this amount on behalf of Calvert Cliffs. Any costs to decommission Calvert Cliffs in excess of this \$520 million must be paid by Calvert Cliffs. If BGE ratepayers have paid more than this amount at the time of decommissioning, Calvert Cliffs must refund the excess. If the cost to decommission Calvert Cliffs is less than the \$520 million BGE's ratepayers are obligated to pay, Calvert Cliffs may keep the difference.

As discussed in *Baltimore Gas and Electric Company Provider of Last Resort* section, Senate Bill 1, which was enacted in June 2006, requires BGE to provide credits to residential electric customers equal to the amount collected for decommissioning annually for 10 years beginning January 1, 2007. Under the provisions of Senate Bill 1 we are required to apply the collection of the nuclear decommissioning trust funds over the ten year period beginning January 1, 2007 toward the fulfillment of the decommissioning obligations of BGE ratepayers.

The sellers of Nine Mile Point transferred a \$441.7 million decommissioning trust fund to us at the time of sale. In return, we assumed all liability for the costs to decommission Unit 1 and 82% of the costs to decommission Unit 2. We believe that this amount is adequate to cover our responsibility for decommissioning Nine Mile Point to a greenfield status (restoration of the site so that it substantially matches the natural state of the surrounding properties and the site's intended use). At December 31, 2006, the Nine Mile Point trust fund assets were \$572.8 million.

The seller of Ginna transferred \$200.8 million in decommissioning funds to us. In return, we assumed all liability for the costs to decommission the unit. We believe that this amount will be sufficient to cover our responsibility for decommissioning Ginna to a greenfield status. At December 31, 2006, the Ginna trust fund assets were \$246.7 million.

Coal

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We purchase the majority of our coal for electric generation under supply contracts with mining operators, and we acquire the remainder in the spot or forward coal markets. We believe that we will be able to renew supply contracts as they expire or enter into contracts with other coal suppliers. Our primary coal burning facilities have the following requirements:

	Approximate Annual Coal Requirement (tons)	Special Coal Restrictions
Brandon Shores Units 1 and 2 (combined)	3,500,000	Sulfur content less than 1.20 lbs per mmBTU
C. P. Crane Units 1 and 2 (combined)	850,000	Low ash melting temperature
H. A. Wagner Units 2 and 3 (combined)	1,100,000	Sulfur content no more than 1%

Coal deliveries to these facilities are made by rail and barge. Over the past few years, we expanded our coal sources including restructuring our rail contracts, increasing the range of coals we can consume, adding synthetic fuel as an alternate source, and finding potential other coal supply sources including shipments from various international sources. While we primarily use coal produced from mines located in central and northern Appalachia, we are capable of switching to imported coals to manage our coal supply. The timely delivery of coal together with the maintenance of appropriate levels of inventory is necessary to allow for continued, reliable generation from these facilities.

All of the Conemaugh and Keystone plants' annual coal requirements are purchased by the plant operators from regional suppliers on the open market. The sulfur restrictions on coal are approximately 2.3% for the Keystone plant and approximately 5.3% for the Conemaugh plant.

The annual coal requirements for the ACE, Jasmin, and Poso plants, which are located in California, are supplied under contracts with mining operators. The Jasmin and Poso plants are restricted to coal with sulfur content less than 4.0% and ACE is restricted to less than 2.0%.

All of our coal requirements reflect historical levels. The actual fuel quantities required can vary substantially from historical levels depending upon the relationship between energy prices and fuel costs, weather conditions, and operating requirements.

Gas

We purchase natural gas, storage capacity, and transportation, as necessary, for electric generation at certain plants. Some of our gas-fired units can use residual fuel oil or distillates instead of gas. Gas is purchased under contracts with suppliers on the spot market and forward markets, including financial exchanges and bilateral agreements. The actual fuel quantities required can vary substantially from year to year depending upon the relationship between energy prices and fuel costs, weather conditions, and operating requirements. However, we believe that we will be able to obtain adequate quantities of gas to meet our requirements.

Oil

Under normal burn practices, our requirements for residual fuel oil (No. 6) amount to approximately 1.5 million to 2.0 million barrels of low-sulfur oil per year. Deliveries of residual fuel oil are made from the suppliers' Baltimore Harbor and Philadelphia marine terminals for distribution to the various generating plant locations. Also, based on normal burn practices, we require approximately 8.0 million to 11.0 million gallons of distillates (No. 2 oil and kerosene) annually, but these requirements can vary substantially from year

to year depending upon the relationship between energy prices and fuel costs, weather conditions, and operating requirements. Distillates are purchased from the suppliers Baltimore truck terminals for distribution to the various generating plant locations. We have contracts with various suppliers to purchase oil at spot prices, and for future delivery, to meet our requirements.

Competition

Market developments over the past several years have changed the nature of competition in the merchant energy business. Certain companies within the merchant energy sector have curtailed their activities or withdrawn completely from the business. However, new competitors (e.g., financial investors, banks and investment banks) have entered the market. We encounter competition from companies of various sizes, having varying levels of experience, financial and human resources, and differing strategies.

We face competition in the market for energy, capacity, and ancillary services. In our merchant energy business, we compete with international, national, and regional full service energy providers, merchants, and producers to obtain competitively priced supplies from a variety of sources and locations, and to utilize efficient transmission, transportation, or storage. We principally compete on the basis of price, customer service, reliability, and availability of our products.

With respect to power generation, we compete in the operation of energy-producing projects, and our competitors in this business are both domestic and international organizations, including various utilities, industrial companies and independent power producers (including affiliates of utilities, financial investors, banks and investment banks), some of which have greater financial resources.

States are considering different types of regulatory initiatives concerning competition in the power industry, which makes a competitive assessment difficult. Increased competition that resulted from some of these initiatives in several states contributed in some instances to a reduction in electricity prices and put pressure on electric utilities to lower their costs, including the cost of purchased electricity. While many states continue to support retail competition and industry restructuring, other states that were considering deregulation have slowed their plans or postponed consideration of deregulation. In addition, other states are reconsidering deregulation.

We believe there is adequate growth potential in the current deregulated market and that further market changes could provide additional opportunities for our merchant energy business. In addition, our wholesale marketing, risk management, and trading operation participates in global coal sourcing activities by providing coal for the variable or fixed supply needs of North American and international power generators. In addition, our wholesale marketing, risk management, and trading operation includes upstream (exploitation and production) and downstream (transportation and storage) natural gas operations.

As the market for commercial, industrial, and governmental supply continues to grow, we have experienced increased competition on a regional basis in our retail competitive supply activities. The increase in retail competition and the impact of wholesale power prices compared to the rates charged by local utilities has, in certain circumstances, reduced the margins that we realize from our customers. However, we believe that our experience and expertise in assessing and managing risk and our strong focus on customer service will help us to remain competitive during volatile or otherwise adverse market circumstances.

Merchant Energy Operating Statistics

	2006	2005	2004	2003	2002
Revenues (<i>In millions</i>)					
Mid-Atlantic Region	\$ 2,813.5	\$ 2,283.9	\$ 1,925.6	\$ 1,696.2	\$ 1,415.1

* Includes output from gas-fired plants until sale in December 2006.

Operating statistics do not reflect the elimination of intercompany transactions.

Certain prior-year amounts have been reclassified to conform with the current year's presentation. The reclassifications primarily relate to operations that have been reflected as discontinued in the current year.

Baltimore Gas and Electric Company

BGE is an electric transmission and distribution utility company and a gas distribution utility company with a service territory that covers the City of Baltimore and all or part of ten counties in central Maryland. BGE is regulated by the Maryland PSC and Federal Energy Regulatory Commission (FERC) with respect to rates and other aspects of its business.

BGE's electric service territory includes an area of approximately 2,300 square miles. There are no municipal or cooperative wholesale customers within BGE's service territory. BGE's gas service territory includes an area of approximately 800 square miles.

BGE's electric and gas revenues come from many customers—residential, commercial, and industrial.

Electric Business

Electric Regulatory Matters and Competition

Deregulation

Effective July 1, 2000, electric customer choice and competition among electric suppliers was implemented in Maryland. As a result of the deregulation of electric generation, all customers can choose their electric energy supplier. While BGE does not sell electric commodity to all customers in its service territory, BGE continues to deliver electricity to all customers and provides meter reading, billing, emergency response, and regular maintenance.

Standard Offer Service

BGE provided fixed-price standard offer service to commercial and industrial customers through either June 30, 2002 or June 30, 2004, depending on customer type, and for residential customers through June 30, 2006.

Upon the expiration of fixed-price standard offer service, customers that continue to receive their electric supply from BGE are charged market-based standard offer service rates (Provider of Last Resort rates). We discuss Provider of Last Resort (POLR) rates in more detail below.

Provider of Last Resort

BGE is obligated to provide market-based standard offer service to all of its electric customers for varying periods. The POLR rates charged recover BGE's wholesale power supply costs and include an administrative fee. The administrative fee includes a shareholder return component and an incremental cost component. As a result of Senate Bill 1, beginning January 1, 2007, the shareholder return component of the administrative charge for residential POLR service was suspended. We discuss Senate Bill 1 in detail in the *Residential Customers* section.

Bidding to supply BGE's market-based standard offer service will occur from time to time through a competitive bidding process approved by the Maryland PSC. Successful bidders, which may include subsidiaries of Constellation Energy, will execute contracts with BGE for varying terms.

Commercial and Industrial Customers

BGE is obligated to provide market-based standard offer service to commercial and industrial customers for varying periods beyond June 30, 2004, depending on customer load.

In August 2006, the Maryland PSC issued an order indefinitely extending the obligation of Maryland utilities to provide POLR service for those commercial and industrial customers for which market-based standard offer service was scheduled to expire at the end of May 2007. The extended service will be provided on substantially the same terms as under the existing service, except that wholesale bidding for service to some customers will be conducted more frequently.

BGE's obligation to provide market-based standard offer service to its largest commercial and industrial customers expired on May 31, 2005. BGE continues to provide an hourly-priced market-based standard offer service to those customers.

Residential Customers

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

As a result of the November 1999 Maryland PSC order regarding the deregulation of electric generation in Maryland, BGE's residential electric base rates were frozen until July 2006. Subsequent orders of the Maryland PSC specified that BGE would procure the power to serve residential customers beginning July 2006 via auctions to be conducted in late 2005 and early 2006. The procured power costs of these auctions would have resulted in an average electric residential customer bill increase of 72%. In June 2006, Senate Bill 1 was enacted, which, among other things:

- ◆ imposes rate stabilization measures that (i) cap rate increases by BGE for residential POLR service at 15% from July 1, 2006 to May 31, 2007, (ii) give residential POLR customers the option from June 1, 2007 until December 31, 2007 of paying a full market rate or choosing a short term rate stabilization plan in order to provide a smooth transition to market rates without adversely affecting the creditworthiness of BGE, and (iii) provide for full market rates for residential POLR service starting January 1, 2008;
- ◆ allows BGE to recover the costs deferred from July 1, 2006 to May 31, 2007 from its customers over a period not to exceed 10 years, on terms and conditions to be determined by the Maryland PSC, including through the issuance of rate stabilization bonds that securitize the deferred costs;

- ◆ directs the Maryland PSC to investigate measures to mitigate the impact of residential rate increases on BGE customers, including by investigating the prior determination of and allowances for stranded costs that occurred when BGE transferred assets to its affiliates in 2000 and by requiring the Maryland PSC to provide funds to residential customers of BGE for mitigation of BGE's rate increases, including any adjustment in favor of BGE's customers to allowances for such stranded costs; and
- ◆ requires BGE to reduce residential electric rates by approximately \$39 million per year for 10 years, beginning January 1, 2007, through suspension of the collection of the residential return component of the administrative charge for POLR service and a credit equal to the amount collected from BGE ratepayers for the nuclear decommissioning trust for Calvert Cliffs. We provide further details in the *Cost for Decommissioning* section.

In August 2006, the Maryland PSC began its investigation into the general regulatory structure, agreements, orders, and other prior actions of the Maryland PSC under the Electric Customer Choice and Competition Act of 1999, including the determination of and allowances for stranded costs. We cannot predict the outcome of the investigation, but it could have a material adverse effect on our, or BGE's, financial results.

In December 2006, the Maryland PSC issued an order that allows BGE to securitize its costs relating to the residential rate deferral through the issuance of bonds in an aggregate principal amount of approximately \$630 million, subject to adjustment.

Also in December 2006, in connection with implementing the \$39 million in annual residential electric rate reductions discussed above, BGE and Calvert Cliffs notified the Maryland PSC that they had entered into a standstill agreement with the Attorney General of the State of Maryland with respect to potential challenges to the provisions of Senate Bill 1 relating to the reductions.

In January 2007, BGE filed a proposed plan with the Maryland PSC that would allow residential electric customers to defer the transition to full market rates from June 1, 2007 to December 31, 2007. Under the proposed plan, electric rates for residential customers who elect this extended deferral would increase on June 1, 2007 by one-half of the total increase remaining to reach full market rates on January 1, 2008. We estimate that electric rates for residential electric customers under this plan will be approximately 20-25% higher on June 1, 2007 compared to current residential electric rates. This estimate may differ from the actual increase on June 1, 2007 based on BGE's actual procured power cost, which will be determined in April 2007 via auctions. Customers who choose to defer would repay the deferred amounts over a two-year period starting January 1, 2008, at which time these customers would transition to full market rates. The proposed plan remains subject to Maryland PSC approval.

Because Senate Bill 1 requires additional decisions and proceedings by the Maryland PSC and other governmental authorities to implement and interpret many of its provisions, we cannot predict the ultimate impact of the legislation on us, BGE, or the energy market in Maryland. The new legislation and its implementation through applicable regulatory proceedings could have a material adverse effect on our, or BGE's, financial results. In addition, one or more parties may challenge in court one or more provisions of Senate Bill 1. The outcome of any challenges and the uncertainty that could result cannot be predicted.

We discuss other aspects of Senate Bill 1 in *Item 7. Management's Discussion and Analysis Business Environment Senate Bill 1* section. We discuss the market risk of our regulated electric business in more detail in *Item 7. Management's Discussion and Analysis Market Risk* section.

Electric Load Management

BGE has implemented various programs for use when system-operating conditions or market economics indicate that a reduction in load would be beneficial. We refer to these programs as active load management programs. These programs include:

- ◆ two options for commercial and industrial customers to voluntarily reduce their electric loads,
- ◆ air conditioning control for residential and commercial customers, and
- ◆ residential water heater control.

These programs generally take effect on summer days when demand and/or wholesale prices are relatively high and had the capability during the 2006 summer to reduce load up to approximately 233 MW.

Transmission and Distribution Facilities

BGE maintains approximately 250 substations and 1,300 circuit miles of transmission lines throughout central Maryland. BGE also maintains approximately 23,900 circuit miles of distribution lines. The transmission facilities are connected to those of neighboring utility systems as part of PJM. Under the PJM Tariff and various agreements, BGE and other market participants can use regional transmission facilities for energy, capacity, and ancillary services transactions including emergency assistance.

We discuss various FERC initiatives relating to wholesale electric markets in more detail in *Item 7. Management's Discussion and Analysis - Federal Regulation* section.

(A) Primarily includes network integration transmission service revenues, late payment charges, miscellaneous service fees, and tower leasing revenues.

Operating statistics do not reflect the elimination of intercompany transactions.

Delivery service only refers to BGE's delivery of commodity that was purchased by the customer from an alternate supplier.

Gas Business

The wholesale price of natural gas as a commodity is not subject to regulation. All BGE gas customers have the option to purchase gas from alternative suppliers, including subsidiaries of Constellation Energy. BGE continues to deliver gas to all customers within its service territory. This delivery service is regulated by the Maryland PSC.

BGE also provides customers with meter reading, billing, emergency response, regular maintenance, and balancing services.

Approximately 50% of the gas delivered on BGE's distribution system is for customers that purchase gas from alternative suppliers. These customers are charged fees to recover the costs BGE incurs to deliver the customers' gas through our distribution system.

In December 2005, the Maryland PSC issued an order granting BGE a \$35.6 million annual increase in its gas base rates. In December 2006, the Baltimore City Circuit Court upheld the rate order. However, certain parties have filed an appeal with the Court of Special Appeals. We cannot provide assurance that the Maryland PSC's order will not be reversed in whole or in part or that certain issues will not be remanded to the Maryland PSC for reconsideration.

For customers that buy their gas from BGE, there is a market-based rates incentive mechanism. Under this market-based rates incentive mechanism, our actual cost of gas is compared to a market index (a measure of the market price of gas in a given period). The difference between our actual cost and the market index is shared equally between shareholders and customers. BGE must secure fixed-price contracts for at least 10%, but not more than 20%, of forecasted system supply requirements for the November through March period. These fixed-price contracts are not subject to sharing under the market-based rates incentive mechanism.

BGE purchases the natural gas it resells to customers directly from many producers and marketers. BGE has transportation and storage agreements that expire from 2007 to 2028.

BGE's current pipeline firm transportation entitlements to serve BGE's firm loads are 313,053 dekatherms (DTH) per day.

BGE's current maximum storage entitlements are 235,080 DTH per day. To supplement its gas supply at times of heavy winter demands and to be available in temporary emergencies affecting gas supply, BGE has:

- ◆ a liquefied natural gas facility for the liquefaction and storage of natural gas with a total storage capacity of 1,092,977 DTH and a daily capacity of 311,500 DTH, and
- ◆ a propane air facility with a mined cavern with a total storage capacity equivalent to 564,200 DTH and a daily capacity of 85,000 DTH.

BGE has under contract sufficient volumes of propane for the operation of the propane air facility and is capable of liquefying sufficient volumes of natural gas during the summer months for operations of its liquefied natural gas facility during peak winter periods.

BGE historically has been able to arrange short-term contracts or exchange agreements with other gas companies in the event of short-term disruptions to gas supplies or to meet additional demand.

BGE also participates in the interstate markets by releasing pipeline capacity or bundling pipeline capacity with gas for off-system sales. Off-system gas sales are low-margin direct sales of gas to wholesale suppliers of natural gas. Earnings from these activities are shared between shareholders and customers. BGE makes these sales as part of a program to balance our supply of, and cost of, natural gas.

Commercial	42.3	42.0	41.6	41.1	40.7
Industrial	1.2	1.2	1.2	1.2	1.3
Total	640.6	634.1	624.8	617.5	609.3

Operating statistics do not reflect the elimination of intercompany transactions.

Delivery service only refers to BGE's delivery of commodity that was purchased by the customer from an alternate supplier.

Franchises

BGE has nonexclusive electric and gas franchises to use streets and other highways that are adequate and sufficient to permit them to engage in their present business. Conditions of the franchises are satisfactory.

Other Nonregulated Businesses

Energy Projects and Services

We offer energy projects and services designed primarily to provide energy solutions to large commercial and industrial and governmental customers. These energy products and services include:

- ◆ designing, constructing, and operating heating, cooling, and cogeneration facilities,
- ◆ energy savings projects and performance contracting,
- ◆ energy consulting and procurement services ,
- ◆ services to enhance the reliability of individual electric supply systems, and
- ◆ customized financing alternatives.

Home Products and Gas Retail Marketing

We offer services to customers in Maryland including:

- ◆ home improvements,
- ◆ the service of heating, air conditioning, plumbing, electrical, and indoor air quality systems, and
- ◆ the sale of natural gas to residential customers.

Consolidated Capital Requirements

Our total capital requirements for 2006 were \$1,149 million. Of this amount, \$789 million was used in our nonregulated businesses and \$360 million was used in our regulated business. We estimate our total capital requirements will be \$1,915 million in 2007.

We continuously review and change our capital expenditure programs, so actual expenditures may vary from the estimate above. We discuss our capital requirements further in *Item 7. Management's Discussion and Analysis - Capital Resources* section.

Environmental Matters

The development (involving site selection, environmental assessments, and permitting), construction, acquisition, and operation of electric generating and distribution facilities are subject to extensive federal, state, and local environmental and land use laws and regulations. From the beginning phases of development to the ongoing operation of existing or new electric generating and distribution facilities, our activities involve compliance with diverse laws and regulations that address emissions and impacts to air and water, protection of natural and cultural resources, and chemical and waste handling and disposal.

We continuously monitor federal, state, and local environmental initiatives to determine potential impacts on our financial results. As new laws or regulations are promulgated, we assess their applicability and implement the necessary modifications to our facilities or their operation to maintain ongoing compliance. Our capital expenditures were approximately \$100 million during the five-year period 2002-2006 to comply with existing environmental standards and regulations. Our estimated environmental capital requirements for the next three years are approximately \$335 million in 2007, \$495 million in 2008, and \$305 million in 2009.

Air Quality

Federal

The Clean Air Act created the basic framework for the federal and state regulation of air pollution.

National Ambient Air Quality Standards (NAAQS)

The NAAQS are federal air quality standards authorized under the Clean Air Act that establish maximum ambient air concentrations for the following specific pollutants: ozone (smog), carbon monoxide, lead, particulates, sulfur dioxides (SO₂), and nitrogen dioxides (NO₂).

In order for states to achieve compliance with the NAAQS, the Environmental Protection Agency (EPA) adopted the Clean Air Interstate Rule (CAIR) in March 2005 to further reduce ozone and fine particulate pollution by addressing the interstate transport of SO₂ and nitrogen oxide (NO_x) emissions from fossil fuel-fired generating facilities located primarily in the Eastern United States.

In May 2005, the EPA adopted a stricter NAAQS for ozone and rescinded a requirement to impose fees on emissions sources in certain areas, including certain of our generating facilities, for failure to achieve the previous ozone standard. States will be required to submit plans to the EPA to meet the new standard by 2007, at which time the standard will take effect. We are unable to determine the impact that complying with the stricter NAAQS for ozone will have on our financial results until the states in which our generating facilities are located adopt plans to meet the new standard.

In December 2006, the United States Court of Appeals for the District of Columbia Circuit ruled that the requirement to impose fees on emissions sources based on the previous ozone standard remained applicable retroactive to November 2005 and remanded the issue to the EPA for reconsideration. At this time, we cannot predict what action the EPA will take in response to the Court's decision and whether the fees will be retroactively assessed. The exact method of computing these fees has not been established and will depend in part on state implementation regulations that have not been finalized. Consequently, we are unable to estimate the ultimate financial impact of the fees in light of the uncertainty surrounding the methodology that

will be used in calculating the fees. However, any fees that are ultimately assessed could have a material adverse effect on our financial results.

In September 2006, the EPA adopted a stricter NAAQS for particulate matter. We are unable to determine the impact that complying with the stricter NAAQS for particulate matter will have on our financial results until the states in which our generating facilities are located adopt plans to meet the new standard.

Hazardous Air Emissions

In March 2005, the EPA finalized the Clean Air Mercury Rule (CAMR) to reduce the emissions of mercury from coal-fired facilities through a market-based cap and trade program. CAMR will affect all coal or waste coal fired boilers at our generating facilities.

New Source Review

In connection with its enforcement of the Clean Air Act's new source review requirements, in 2000, the EPA requested information relating to modifications made to our Brandon Shores, Crane, and Wagner plants located in Maryland. The EPA also sent similar, but narrower, information requests to two of our newer Pennsylvania waste-coal burning plants in which we have an ownership interest. We responded to the EPA in 2001, and as of the date of this report the EPA has taken no further action.

Based on the level of emissions control that the EPA and states are seeking in these new source review enforcement actions, we believe that material additional costs and penalties could be incurred, and planned capital expenditures could be accelerated, if the EPA was successful in any future actions regarding our facilities.

In March 2006, the U.S. Court of Appeals for the District of Columbia annulled the equipment replacement rule adopted by the EPA in August 2003, which established a threshold for determining when major new source review requirements are triggered. We believe the Court decision, which was anticipated, should have minimal effect on us as it maintains the existing rules for equipment replacement. However, we anticipate that the EPA will continue to examine the existing equipment replacement rules and may again propose new rules. In addition, the U.S. Supreme Court has agreed to hear a case, not involving us, relating to the new source review requirements. We cannot predict the timing or outcome of any future EPA regulatory action or the outcome of the U.S. Supreme Court proceeding, or their possible effect on our financial results.

State

Maryland has adopted the Healthy Air Act (HAA) and the Clean Power Rule (CPR), which establish annual SO₂, NO_x, and mercury emission caps for specific coal-fired units in Maryland, including units located at three of our facilities. The requirements of the HAA and the CPR for SO₂, NO_x, and mercury emissions are more stringent and apply sooner than those under CAIR and CAMR.

In addition, Pennsylvania has adopted regulations requiring coal-fired generating facilities located in Pennsylvania to reduce mercury emissions sooner and to a greater extent than required under CAMR.

Several other states in the northeastern U.S. continue to consider more stringent and earlier SO₂, NO_x, and mercury emissions reductions than those required under CAIR or CAMR.

Capital Expenditure Estimates

We expect to incur additional environmental capital spending as a result of complying with the air quality laws and regulations discussed above. Based on the information currently available to us about CAIR, CAMR, HAA, and CPR, we will install additional air emission control equipment at our coal-fired generating facilities in Maryland and at our co-owned coal-fired facilities in Pennsylvania to meet air quality standards. We include in our estimated environmental capital requirements capital spending for these projects, which we expect will be approximately \$320 million in 2007, \$470 million in 2008, \$290 million in 2009 and \$40 million from 2010-2011.

Our estimates are subject to significant uncertainties including the timing of any additional federal and/or state regulations or legislation, the implementation timetables for such regulation or legislation, and the specific amount of emissions reductions that will be required at our facilities. As a result, we cannot predict our capital spending or the scope or timing of these projects with certainty, and the actual expenditures, scope and timing could differ significantly from our estimates. In addition, CAMR is subject to legal challenges filed by the states and industry

and environmental groups. We cannot predict the timing or outcome of these challenges, or their possible effect on our financial results.

We believe that the additional air emission control equipment we plan to install will meet the emission reduction requirements under CAIR, CAMR, HAA, and CPR. If additional emission reductions still are required, we will assess our various compliance alternatives and their related costs, and although we cannot yet estimate the additional costs we may incur, such costs could be material.

16

Global Climate Change

Although uncertainty remains as to the nature and timing of greenhouse gas emissions regulation, there is an increasing likelihood that such regulation will occur at the federal and/or state level. In the event that greenhouse gas emissions reduction legislation or regulations are enacted, we will assess our various compliance alternatives, which may include installation of additional environmental controls, modification of operating schedules or the closure of one or more of our coal-fired generating facilities. Any compliance costs we incur could have a material impact on our financial results.

The HAA requires that Maryland become a full participant in the Northeast Regional Greenhouse Gas Initiative (RGGI) by June 2007. Under RGGI, it is expected that affected plants would participate in an auction to obtain sufficient CO₂ allowances to support the level of emissions that result from plant operations.

In addition, California has adopted regulations requiring our generating facilities in California to submit greenhouse gas emissions data to the state, which the state intends to use to develop a plan to reduce greenhouse gas emissions.

We continue to evaluate the potential impact of the HAA and California CO₂ emissions requirements and RGGI participation on our financial results; however, our compliance costs could be material.

Water Quality

The Clean Water Act established the basic framework for federal and state regulation of water pollution control and requires facilities that discharge waste or storm water into the waters of the United States to obtain permits.

Water Intake Regulations

In July 2004, the EPA published final rules under the Clean Water Act that require cooling water intake structures to reflect the best technology available for minimizing adverse environmental impacts. We currently have six facilities affected by the regulation. The rule allows for a number of compliance options that will be assessed through 2007, following which we will determine whether any action is required and what our most viable options are if any action is required. Until we determine our most viable option under the final rules, we cannot estimate our compliance costs. However, the costs associated with the final rules could be material.

In January 2007, the United States Court of Appeals for the Second Circuit ruled that the EPA's rule did not properly implement the Clean Water Act requirements in a number of areas and remanded the rule to the EPA for reconsideration. At this time, we cannot predict the timing or outcome of any EPA regulatory action taken in response to the court's decision. However, any such action could impact our compliance approach, which could have a material effect on our financial results.

Hazardous and Solid Waste

We discuss proceedings relating to compliance with the Comprehensive Environmental Response, Compensation and Liability Act in *Note 12 to Consolidated Financial Statements*.

Our coal-fired generating facilities produce approximately two and a half million tons of combustion by-products (ash) each year. The EPA has announced its intention to develop national standards, currently scheduled to be proposed in May 2007, to regulate this material as a non-hazardous waste, and is developing regulations governing the placement of ash in landfills, surface impoundments, and sand/gravel surface mines.

The EPA is also developing regulations for ash placement in coal mines, which are expected to be proposed in October 2007. Federal regulation has the potential to result in additional requirements. Depending on the scope of any final requirements, our compliance costs could be material.

As a result of these regulatory proposals, the remaining ash placement capacity at our current mine reclamation site and our current ash generation projections, we are exploring our options for the placement of ash, including construction of an ash placement facility. Over the next five years, we estimate that our capital expenditures for this project will be approximately \$75 million. Our estimates are subject to significant uncertainties including the timing of any regulatory change, its implementation timetable, and the scope of the final requirements. As a result, we cannot predict our capital spending or the scope and timing of this project with certainty, and the actual expenditures, scope and timing could differ significantly from our estimates.

Employees

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Constellation Energy and its subsidiaries had approximately 9,645 employees at December 31, 2006. At the Nine Mile Point facility, approximately 515 employees are represented by the International Brotherhood of Electrical Workers, Local 97. The labor contract with this union expires in June 2011. We believe that our relationship with this union is satisfactory, but there can be no assurances that this will continue to be the case.

17

Item 1A. Risk Factors

You should consider carefully the following risks, along with the other information contained in this Form 10-K. The risks and uncertainties described below are not the only ones that may affect us. Additional risks and uncertainties also may adversely affect our business and operations including those discussed in Item 7. Management's Discussion and Analysis. If any of the following events actually occur, our business and financial results could be materially adversely affected.

Our merchant energy business may incur substantial costs and liabilities and be exposed to price volatility and counterparty performance risk as a result of its participation in the wholesale energy markets.

We purchase and sell power and fuel in markets exposed to significant risks, including price volatility for electricity and fuel and the credit risks of counterparties with which we enter into trades.

We use various hedging strategies in an effort to mitigate many of these risks. However, hedging transactions do not guard against all risks and are not always effective, as they are based upon predictions about future market conditions. The inability or failure to effectively hedge assets or fuel or power positions against changes in commodity prices, interest rates, counterparty credit risk or other risk measures could significantly impair future financial results.

Exposure to electricity price volatility. We buy and sell electricity in both the wholesale bilateral markets and spot markets, which exposes us to the risks of rising and falling prices in those markets, and our cash flows may vary accordingly. At any given time, the wholesale spot market price of electricity for each hour is generally determined by the cost of supplying the next unit of electricity to the market during that hour. This is highly dependent on the regional generation market. In many cases, the next unit of electricity supplied would be supplied from generating stations fueled by fossil fuels, primarily coal, natural gas and oil. Consequently, the open market wholesale price of electricity may reflect the cost of coal, natural gas or oil plus the cost to convert the fuel to electricity and an appropriate return on capital. Therefore, changes in the supply and cost of coal, natural gas and oil may impact the open market wholesale price of electricity.

A portion of our power generation facilities operates wholly or partially without long-term power purchase agreements. As a result, power from these facilities is sold on the spot market or on a short-term contractual basis, which if not fully hedged may affect the volatility of our financial results.

Exposure to fuel cost volatility. Currently, our power generation facilities purchase a portion of their fuel through short-term contracts or on the spot market. Fuel prices can be volatile, and the price that can be obtained for power produced from such fuel may not change at the same rate as fuel costs. As a result, fuel price increases may adversely affect our financial results.

Exposure to counterparty performance. Our merchant energy business enters into trades and hedging transactions with numerous third parties (commonly referred to as counterparties). In such arrangements, we are exposed to the credit risks of our counterparties and the risk that one or more counterparties may fail to perform their obligations to make payments or deliver fuel or power. These risks are enhanced during periods of commodity price fluctuations, such as is currently being experienced in the United States. Defaults by suppliers and other counterparties may adversely affect our financial results.

The operation of power generation facilities, including nuclear facilities, involves significant risks that could adversely affect our financial results.

We own and operate a number of power generation facilities. The operation of power generation facilities involves many risks, including start up risks, breakdown or failure of equipment, transmission lines, substations or pipelines, use of new technology, the dependence on a specific fuel source, including the transportation of fuel, or the impact of unusual or adverse weather conditions (including natural disasters such as hurricanes) or environmental compliance, as well as the risk of performance below expected or contracted levels of output or efficiency. This could result in lost revenues and/or increased expenses. Insurance, warranties, or performance guarantees may not cover any or all of the lost revenues or increased expenses, including the cost of replacement power. A portion of our generation facilities were constructed many years ago. Older generating equipment may require significant capital expenditures to keep it operating at peak efficiency. This equipment is also likely to require periodic upgrading and improvement. Breakdown or failure of one of our operating facilities may prevent the facility from

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

performing under applicable power sales agreements which, in certain situations, could result in termination of the agreement or incurring a liability for liquidated damages.

We are subject to numerous environmental laws and regulations that require capital expenditures, increase our cost of operations and may expose us to environmental liabilities.

We are subject to extensive federal, state, and local environmental statutes, rules and regulations relating to air quality, water quality, waste management, wildlife protection, the management of natural resources, and the protection of human health and safety that could, among other things, require additional pollution control equipment, limit the use of certain fuels, restrict the

18

output of certain facilities, or otherwise increase costs. Significant capital expenditures, operating and other costs are associated with compliance with environmental requirements, and these expenditures and costs could become even more significant in the future as a result of regulatory changes.

For example, the State of Maryland has enacted the Healthy Air Act and the Clean Power Rule, which will require, among other things, more rapid emission reductions by Maryland power generation facilities (including those owned and operated by us) than is required by current federal laws and regulations.

We are subject to liability under environmental laws for the costs of remediating environmental contamination. Remediation activities include the cleanup of current facilities and former properties, including manufactured gas plant operations and offsite waste disposal facilities. The remediation costs could be significantly higher than the liabilities recorded by us. Also, our subsidiaries are currently involved in proceedings relating to sites where hazardous substances have been released and may be subject to additional proceedings in the future.

We are subject to legal proceedings by individuals alleging injury from exposure to hazardous substances and could incur liabilities that may be material to our financial results. Additional proceedings could be filed against us in the future.

We may also be required to assume environmental liabilities in connection with future acquisitions. As a result, we may be liable for significant environmental remediation costs and other liabilities arising from the operation of acquired facilities, which may adversely affect our financial results.

Our generation business may incur substantial costs and liabilities due to its ownership and operation of nuclear generating facilities.

We own and operate nuclear power plants. Ownership and operation of these plants exposes us to risks in addition to those that result from owning and operating non-nuclear power generation facilities. These risks include normal operating risks for a nuclear facility and the risks of a nuclear accident.

Nuclear Operating Risks. The ownership and operation of nuclear generating facilities involve routine operating risks, including:

- ◆ mechanical or structural problems;
- ◆ inadequacy or lapses in maintenance protocols;
- ◆ impairment of reactor operation and safety systems due to human or mechanical error;
- ◆ costs of storage, handling and disposal of nuclear materials, including the availability or unavailability of a permanent repository for spent nuclear fuel;
- ◆ regulatory actions, including shut down of units because of public safety concerns, whether at our plants or other nuclear operators;
- ◆ limitations on the amounts and types of insurance coverage commercially available;
- ◆ uncertainties regarding both technological and financial aspects of decommissioning nuclear generating facilities; and
- ◆ environmental risks, including risks associated with changes in environmental legal requirements.

Nuclear Accident Risks. In the event of a nuclear accident, the cost of property damage and other expenses incurred may exceed our insurance coverage available from both private sources and an industry retrospective payment plan. In addition, in the event of an accident at one of our or another participating insured party's nuclear plants, we could be assessed retrospective insurance premiums (because all nuclear plant operators contribute to a nationwide catastrophic

insurance fund). Uninsured losses or the payment of retrospective insurance premiums could each have a material adverse effect on our financial results.

We often rely on single suppliers and at times on single customers, exposing us to significant financial risks if either should fail to perform their obligations.

We often rely on a single supplier for the provision of fuel, water, and other services required for operation of a facility, and at times, we rely on a single customer or a few customers to purchase all or a significant portion of a facility's output, in some cases under long-term agreements that provide the support for any project debt used to finance the facility. The failure of any one customer or supplier to fulfill its contractual obligations could negatively impact our financial results. Consequently, our financial performance depends on the continued performance by customers and suppliers of their obligations under these long-term agreements.

Reduced liquidity in the markets in which we operate could impair our ability to appropriately manage the risks of our operations.

We are an active participant in energy markets through our competitive energy businesses. The liquidity of regional energy markets is an important factor in our ability to manage risks in these operations. Over the past several years, several merchant energy businesses have ended or significantly reduced their activities as a result of several factors including government investigations, changes in market design and deteriorating credit quality. As a result, several regional energy markets experienced a significant decline in liquidity. While there have been recent improvements in liquidity, future reductions in liquidity may restrict our ability to manage our risks, and could impact our financial results.

We may not fully hedge our generation assets, competitive supply or other market positions against changes in commodity prices, and our hedging procedures may not work as planned.

To lower our financial exposure related to commodity price fluctuations, we routinely enter into contracts to hedge a portion of our purchase and sale commitments, weather positions, fuel requirements, inventories of natural gas, coal and other commodities, and competitive supply. As part of this strategy, we routinely utilize fixed-price forward physical purchase and sales contracts, futures, financial swaps, and option contracts traded in the over-the-counter markets or on exchanges. However, we may not cover the entire exposure of our assets or positions to market price volatility and the coverage will vary over time. Fluctuating commodity prices may negatively impact our financial results to the extent we have unhedged positions.

In addition, daily value at risk and stop loss limits and liquidity guidelines are based on historical price movements. If prices significantly or persistently deviate from historical prices, the limits may not protect us from significant losses.

Our risk management policies and procedures may not always work as planned. As a result of these and other factors, we cannot predict with precision the impact that risk management decisions may have on our financial results.

The use of derivative contracts by us in the normal course of business could result in financial losses that negatively impact our financial results.

We use derivative instruments, such as swaps, options, futures and forwards, to manage our commodity and financial market risks and to engage in trading activities. We could recognize financial losses as a result of volatility in the market values of these contracts or if a counterparty fails to perform.

In the absence of actively quoted market prices and pricing information from external sources, the valuation of these derivative instruments involves management's judgment or use of estimates. As a result, changes in the underlying assumptions or use of alternative valuation methods could affect the reported fair value of these contracts.

We operate in deregulated segments of the electric and gas industries created by federal and state restructuring initiatives. If competitive restructuring of the electric or gas industries is reversed, discontinued, restricted or delayed, our business prospects and financial results could be materially adversely affected.

The regulatory environment applicable to the electric and natural gas industries has undergone substantial changes as a result of restructuring initiatives at both the state and federal levels. These initiatives have had a significant impact on the nature of the electric and natural gas industries and the manner in which their participants conduct their businesses. We have targeted the competitive segments of the electric and natural gas industries created by these initiatives.

Due to recent events in the energy markets, energy companies have been under increased scrutiny by state legislatures, regulatory bodies, capital markets and credit rating agencies. This increased scrutiny could lead to substantial changes in laws and regulations affecting us, including modifications to the auction processes in competitive markets and new accounting standards that could change the way we are required to record revenues, expenses, assets and liabilities. The Maryland energy legislation enacted in June 2006 is one example of how these laws can change. We cannot predict the future development of regulation in these markets or the ultimate effect that this changing regulatory environment will have on our business.

If competitive restructuring of the electric and natural gas markets is reversed, discontinued, restricted or delayed, or if the recently enacted Maryland energy legislation is implemented or interpreted in a manner adverse to us, our business prospects and financial results could be negatively impacted.

Our financial results may be harmed if transportation and transmission availability is limited or unreliable.

We have business operations throughout the United States and internationally. As a result, we depend on transportation and transmission facilities owned and operated by utilities and other energy companies to deliver the electricity, coal, and natural gas we sell to the wholesale and retail markets, as well as the natural gas and coal we purchase to supply some of our generating facilities. If transportation or transmission is disrupted, or transportation or transmission capacity is inadequate, our ability to sell and deliver products may be hindered. Such disruptions could also hinder our ability to provide electricity or natural gas to our retail electric and gas customers and may materially adversely affect our financial results.

Our merchant energy business has contractual obligations to certain customers to provide full requirements service, which makes it difficult to predict and plan for load requirements and may result in increased operating costs to our business.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Our merchant energy business has contractual obligations to certain customers to supply full requirements service to such customers to satisfy all or a portion of their energy requirements. The uncertainty regarding the amount of load that our merchant energy business must be prepared to supply to customers may

20

increase our operating costs. A significant under- or over-estimation of load requirements could result in our merchant energy business not having enough or having too much power to cover its load obligation, in which case it would be required to buy or sell power from or to third parties at prevailing market prices. Those prices may not be favorable and thus could increase our operating costs.

Our financial results may fluctuate on a seasonal and quarterly basis or as a result of severe weather.

Our business is affected by weather conditions. Our overall operating results may fluctuate substantially on a seasonal basis, and the pattern of this fluctuation may change depending on the nature and location of any facility we acquire and the terms of any contract to which we become a party. Weather conditions directly influence the demand for electricity and natural gas and affect the price of energy commodities.

Generally, demand for electricity peaks in winter and summer and demand for gas peaks in the winter. Typically, when winters are warmer than expected and summers are cooler than expected, demand for energy is lower, resulting in less electric and gas consumption than forecasted. Depending on prevailing market prices for electricity and gas, these and other unexpected conditions may reduce our revenues and results of operations. First and third quarter financial results, in particular, are substantially dependent on weather conditions, and may make period comparisons less relevant. Severe weather can affect our results of operation.

Severe weather can be destructive, causing outages and/or property damage. This could require us to incur additional costs. Catastrophic weather, such as hurricanes, could impact our or our customers' operating facilities, communication systems and technology. Unfavorable weather conditions may have a material adverse effect on our financial results.

A downgrade in our credit ratings could negatively affect our ability to access capital and/or operate our wholesale and retail competitive supply businesses.

We rely on access to capital markets as a source of liquidity for capital requirements not satisfied by operating cash flows. If any of our credit ratings were to be downgraded, especially below investment grade, our ability to raise capital on favorable terms, including the commercial paper markets, could be hindered, and our borrowing costs would increase. Additionally, the business prospects of our wholesale and retail competitive supply businesses, which in many cases rely on the creditworthiness of Constellation Energy, would be negatively impacted. Some of the factors that affect credit ratings are cash flows, liquidity, and the amount of debt as a component of total capitalization.

In addition, the ability of BGE to recover its costs of providing service and timing of BGE's recovery could have a material adverse effect on the credit ratings of BGE and us.

We, and BGE in particular, are subject to extensive state and federal regulation that could affect our operations and costs.

We are subject to regulation by federal and state governmental entities, including the Federal Energy Regulatory Commission, the Nuclear Regulatory Commission, the Maryland PSC and the utility commissions of other states in which we have operations. In addition, changing governmental policies and regulatory actions can have a significant impact on us. Regulations can affect, for example, allowed rates of return, requirements for plant operations, recovery of costs, limitations on dividend payments and the regulation or re-regulation of wholesale and retail competition (including but not limited to retail choice and transmission costs).

BGE's distribution rates are subject to regulation by the Maryland PSC, and such rates are effective until new rates are approved. In addition, limited categories of costs are recovered through adjustment charges that are periodically reset to reflect current and projected costs. Inability to recover material costs not included in rates or adjustment clauses, including increases in uncollectible customer accounts that may result from higher gas or electric costs, could have an adverse effect on our, or BGE's, cash flow and financial position.

Energy legislation enacted in Maryland in June 2006 mandates rate stabilization that requires BGE to defer the recovery of a portion of its purchased power costs and to phase in the recovery of these costs over a period of years. In addition, the legislation mandates that the Maryland PSC conduct a comprehensive review of Maryland's deregulated electricity market. Because this energy legislation is still in the process of being implemented and interpreted, we do not know the final impact such legislation will have on our, or BGE's, business.

The regulatory process may restrict our ability to grow earnings in certain parts of our business, cause delays in or affect business planning and transactions and increase our, or BGE's, costs.

Poor market performance will affect our benefit plan and nuclear decommissioning trust asset values, which may adversely affect our liquidity and financial results.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Our qualified pension obligations have exceeded the fair value of our plan assets since 2001. At December 31, 2006, our qualified pension obligations were approximately \$405 million greater than the fair value

21

of our plan assets. The performance of the capital markets will affect the value of the assets that are held in trust to satisfy our future obligations under our qualified pension plans. A decline in the market value of those assets may increase our funding requirements for these obligations, which may adversely affect our liquidity and financial results.

We are required to maintain funded trusts to satisfy our future obligations to decommission our nuclear power plants. A decline in the market value of those assets due to poor investment performance or other factors may increase our funding requirements for these obligations, which may have an adverse effect on our liquidity and financial results.

War and threats of terrorism and catastrophic events that could result from terrorism may impact our results of operations in unpredictable ways.

We cannot predict the impact that any future terrorist attacks may have on the energy industry in general and on our business in particular. In addition, any retaliatory military strikes or sustained military campaign may affect our operations in unpredictable ways, such as changes in insurance markets and disruptions of fuel supplies and markets, particularly oil. The possibility alone that infrastructure facilities, such as electric generation, electric and gas transmission and distribution facilities, would be direct targets of, or indirect casualties of, an act of terror may affect our operations.

Such activity may have an adverse effect on the United States economy in general. A lower level of economic activity might result in a decline in energy consumption, which may adversely affect our financial results or restrict our future growth. Instability in the financial markets as a result of terrorism or war may affect our stock price and our ability to raise capital.

We are subject to employee workforce factors that could affect our businesses and financial results.

We are subject to employee workforce factors, including loss or retirement of key executives or other employees, availability of qualified personnel, collective bargaining agreements with union employees, and work stoppage that could affect our financial results. In particular, our competitive energy businesses are dependent, in part, on recruiting and retaining personnel with experience in sophisticated energy transactions and the functioning of complex wholesale markets.

Our ability to successfully identify, complete and integrate acquisitions is subject to significant risks, including the effect of increased competition.

We are likely to encounter significant competition for acquisition opportunities that may become available. In addition, we may be unable to identify attractive acquisition opportunities at favorable prices and to successfully and timely complete and integrate them.

Item 2. Properties

Constellation Energy's corporate offices occupy approximately 106,000 square feet of leased office space in Baltimore, Maryland. The corporate offices for most of our merchant energy business occupy approximately 268,000 square feet of leased office space in another building in Baltimore, Maryland. We describe our electric generation properties on the next page. We also have leases for other offices and services located in the Baltimore metropolitan region, and for various real property and facilities relating to our generation projects.

BGE owns its principal headquarters building located in downtown Baltimore. In addition, BGE owns propane air and liquefied natural gas facilities as discussed in *Item 1. Business Gas Business* section.

BGE also has rights-of-way to maintain 26-inch natural gas mains across certain Baltimore City-owned property (principally parks) which expired in 2004. BGE is in the process of renewing the rights-of-way with Baltimore City for an additional 25 years. The expiration of the rights-of-way does not affect BGE's ability to use the rights-of-way during the renewal process.

BGE has electric transmission and electric and gas distribution lines located:

- ◆ in public streets and highways pursuant to franchises, and
- ◆ on rights-of-way secured for the most part by grants from owners of the property.

All of BGE's property is subject to the lien of BGE's mortgage securing its mortgage bonds. The generation facilities transferred to our subsidiaries by BGE on July 1, 2000, along with the stock we own in certain of our subsidiaries, are subject to the lien of BGE's mortgage.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We believe we have satisfactory title to our power project facilities in accordance with standards generally accepted in the energy industry, subject to exceptions, which in our opinion, would not have a material adverse effect on the use or value of the facilities.

Our merchant energy business owns several natural gas producing properties. We also lease office space throughout North America, and in the United Kingdom and Australia to support our merchant energy business.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

The following table describes our generating facilities:

Plant	Location	Capacity (MW)	% Owned (at December 31, 2006)	Capacity Owned (MW)	Primary Fuel

Item 3. Legal Proceedings

We discuss our legal proceedings in *Note 12 to Consolidated Financial Statements*.

Item 4. Submission of Matters to Vote of Security Holders

On December 8, 2006, we held our annual meeting of shareholders. At that meeting, the following matters were voted upon:

- Class I Directors nominated by Constellation Energy were elected to serve for a term to expire in 2009 and until their successors are duly elected and qualified as follows:

	COMMON SHARES CAST:	
	For	Withheld
Douglas L. Becker	119,241,432	14,048,574
Edward A. Crooke	122,520,333	10,769,673
Mayo A. Shattuck III	128,640,389	4,649,617
Michael D. Sullivan	119,327,025	13,962,981

All other directors whose term of office continued after the date of this meeting are:

James T. Brady	Freeman A. Hrabowski, III
James R. Curtiss	Nancy Lampton
Yves C. de Balmann	Robert J. Lawless
	Lynn M. Martin

- The ratification of PricewaterhouseCoopers LLP as independent registered public accounting firm for 2006 was approved. With respect to holders of common stock, the number of affirmative votes cast was 130,005,402, the number of votes cast against was 1,846,861, and the number of abstentions was 1,437,743.

- The shareholder proposal requesting Constellation Energy to declassify the Board of Directors was approved. With respect to holders of common stock, the number of affirmative votes cast was 76,259,034, the number of votes cast against was 7,688,559, the number of abstentions was 26,748,840, and the number of broker non-votes was 22,593,573.

Executive Officers of the Registrant

Name	Age	Present Office	Other Offices or Positions Held During Past Five Years
Mayo A. Shattuck III	52	Chairman of the Board of Constellation Energy (since July 2002), President and Chief Executive Officer of Constellation Energy (since November 2001); and Chairman of the Board of BGE (since July 2002)	None.
E. Follin Smith	47	Executive Vice President (since January 2004), Chief Financial Officer (since June 2001) and Chief Administrative Officer (since January 2004) of Constellation Energy; and Senior Vice President and Chief Financial Officer of Baltimore Gas and Electric Company (since January 2002)	Senior Vice President Constellation Energy.
Thomas V. Brooks	44	Chairman of Constellation Energy Commodities Group, Inc. (since August 2005); and Vice Chairman (since August 2005) and Executive Vice President (since January 2004) of Constellation Energy	President and Chief Executive Officer Constellation Energy Commodities Group, Inc.
Michael J. Wallace	59	President (since January 2002) and Chief Executive Officer (since May 2005) of Constellation Generation Group, LLC; and Executive Vice President of Constellation Energy (since January 2004)	None.
Thomas F. Brady	57	Executive Vice President, Corporate Strategy and Retail Competitive Supply of Constellation Energy (since January 2004)	Senior Vice President, Corporate Strategy and Development Constellation Energy; and Vice President, Corporate Strategy and Development Constellation Energy.
Irving B. Yoskowitz	61	Executive Vice President and General Counsel of Constellation Energy (since June 2005)	Senior Counsel Crowell & Moring (law firm); and Senior Partner Global Technology Partners, LLC (investment banking and consulting firm).
Felix J. Dawson	39	Senior Vice President of Constellation Energy (since October 2006); and Co-President and Co-Chief Executive Officer of Constellation Energy Commodities Group, Inc. (since August 2005); President and Chief Executive Officer of Constellation Energy Partners LLC (since May 2006)	Co-Chief Commercial Officer Constellation Energy Commodities Group, Inc.; and Managing Director Constellation Energy Commodities Group, Inc.

George E. Persky	37	Senior Vice President of Constellation Energy (since October 2006); and Co-President and Co-Chief Executive Officer of Constellation Energy Commodities Group, Inc. (since August 2005)	Co-Chief Commercial Officer Constellation Energy Commodities Group, Inc.; and Managing Director Constellation Energy Commodities Group, Inc.
Kenneth W. DeFontes, Jr.	56	President and Chief Executive Officer of Baltimore Gas and Electric Company and Senior Vice President of Constellation Energy (since October 2004)	Vice President, Electric Transmission and Distribution BGE.
Paul J. Allen	55	Senior Vice President, Corporate Affairs of Constellation Energy (since January 2004)	Vice President, Corporate Affairs Constellation Energy.
John R. Collins	49	Senior Vice President (since January 2004) and Chief Risk Officer of Constellation Energy (since December 2001); and member of Board of Managers of Constellation Energy Partners LLC (since September 2006)	Vice President Constellation Energy.
Beth S. Perlman	46	Senior Vice President (since January 2004) and Chief Information Officer of Constellation Energy (since April 2002)	Vice President Constellation Energy; and Vice President, Technology Enron Corporation.
Marc L. Ugol	48	Senior Vice President, Human Resources of Constellation Energy (since January 2004)	Vice President, Human Resources Constellation Energy; and Senior Vice President, Human Resources and Administration Tellabs, Inc.

Officers are elected by, and hold office at the will of, the Board of Directors and do not serve a term of office as such. There is no arrangement or understanding between any director or officer and any other person pursuant to which the director or officer was selected.

PART II

Item 5. Market for Registrant's Common Equity and Related Shareholder Matters

Stock Trading

Constellation Energy's common stock is traded under the ticker symbol CEG. It is listed on the New York and Chicago stock exchanges.

As of January 31, 2007, there were 41,680 common shareholders of record.

Dividend Policy

Constellation Energy pays dividends on its common stock after its Board of Directors declares them. There are no contractual limitations on Constellation Energy paying common stock dividends.

Dividends have been paid continuously since 1910 on the common stock of Constellation Energy, BGE, and their predecessors. Future dividends depend upon future earnings, our financial condition, and other factors.

In January 2007, we announced an increase in our quarterly dividend from \$0.3775 to \$0.435 per share payable April 2, 2007 to holders of record on March 12, 2007. This is equivalent to an annual rate of \$1.74 per share.

Quarterly dividends were declared on our common stock during 2006 and 2005 in the amounts set forth below.

BGE pays dividends on its common stock after its Board of Directors declares them. There are no contractual limitations on BGE paying common stock dividends unless:

- ◆ BGE elects to defer interest payments on the 6.20% Deferrable Interest Subordinated Debentures due 2043, and any deferred interest remains unpaid; or
- ◆ any dividends (and any redemption payments) due on BGE's preference stock have not been paid.

Common Stock Dividends and Price Ranges

	2006			2005		
	Dividend Declared	Price High	Price Low	Dividend Declared	Price High	Price Low

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Introduction and Overview

Constellation Energy Group, Inc. (Constellation Energy) is an energy company that conducts its business through various subsidiaries including a merchant energy business and Baltimore Gas and Electric Company (BGE). We describe our operating segments in *Note 3*.

This report is a combined report of Constellation Energy and BGE. References in this report to we and our are to Constellation Energy and its subsidiaries, collectively. References in this report to the regulated business(es) are to BGE. We discuss our business in more detail in *Item 1. Business* section and the risk factors affecting our business in *Item 1A. Risk Factors* section.

In this discussion and analysis, we will explain the general financial condition and the results of operations for Constellation Energy and BGE including:

- ◆ factors which affect our businesses,
- ◆ our earnings and costs in the periods presented,
- ◆ changes in earnings and costs between periods,
- ◆ sources of earnings,
- ◆ impact of these factors on our overall financial condition,
- ◆ expected future expenditures for capital projects, and
- ◆ expected sources of cash for future capital expenditures.

As you read this discussion and analysis, refer to our Consolidated Statements of Income, which present the results of our operations for 2006, 2005, and 2004. We analyze and explain the differences between periods in the specific line items of our Consolidated Statements of Income.

We have organized our discussion and analysis as follows:

- ◆ First, we discuss our strategy.
- ◆ We then describe the business environment in which we operate including how regulation, weather, and other factors affect our business.
- ◆ Next, we discuss our critical accounting policies. These are the accounting policies that are most important to both the portrayal of our financial condition and results of operations and require management's most difficult, subjective or complex judgment.
- ◆ We highlight significant events that are important to understanding our results of operations and financial condition.
- ◆ We then review our results of operations beginning with an overview of our total company results, followed by a more detailed review of those results by operating segment.
- ◆ We review our financial condition addressing our sources and uses of cash, security ratings, capital resources, capital requirements, commitments, and off-balance sheet arrangements.
- ◆ We conclude with a discussion of our exposure to various market risks.

Strategy

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We are pursuing a strategy of providing energy and energy related services through our competitive supply activities and BGE, our regulated utility located in Maryland. Our merchant energy business focuses on short-term and long-term purchases and sales of energy, capacity, and related products to various customers, including distribution utilities, municipalities, cooperatives, and industrial, commercial, and governmental customers.

We obtain this energy through both owned and contracted supply resources. Our generation fleet is strategically located in deregulated markets and includes various fuel types, such as nuclear, coal, gas, oil, and renewable sources. In addition to owning generating facilities, we contract for power from other merchant providers, typically through power purchase agreements. We intend to remain diversified between regulated transmission and distribution and competitive supply. We will use both our owned generation and our contracted generation to support our competitive supply operations.

We are a leading national competitive supplier of energy. In our wholesale and commercial and industrial retail marketing activities we are leveraging our recognized expertise in providing full requirements energy and energy-related services to enter markets, capture market share, and organically grow these businesses. Through the application of technology, intellectual capital, process improvement, and increased scale, we are seeking to reduce the cost of delivering full requirements energy and energy related services and managing risk.

We are also responding proactively to customer needs by expanding the variety of products we offer. Our wholesale competitive supply activities include a growing operation that markets physical energy products and risk management and logistics services to generators, distributors, producers of coal, natural gas and fuel oil, and other consumers.

We trade energy and energy-related commodities and deploy risk capital in the management of our portfolio in order to earn additional returns. These activities are managed through daily value at risk and stop loss limits and liquidity guidelines.

Within our retail competitive supply activities, we are marketing a broader array of products and expanding our markets. Over time, we may consider integrating the sale of electricity and natural gas to provide one energy procurement solution for our customers.

Collectively, the integration of owned and contracted electric generation assets with origination, fuel procurement, and risk management expertise, allows our merchant energy business to earn incremental margin and more effectively manage energy and commodity price risk over geographic regions and over time. Our focus is on providing solutions to customers' energy needs, and our wholesale marketing, risk management, and trading operation adds value to our owned and contracted generation assets by providing national market access, market infrastructure, real-time market intelligence, risk management and arbitrage opportunities, and transmission and transportation expertise. Generation capacity supports our wholesale marketing, risk management, and trading operation by providing a source of reliable power supply.

To achieve our strategic objectives, we expect to continue to pursue opportunities that expand our access to customers and to support our wholesale marketing, risk management, and trading operation with generation assets that have diversified geographic, fuel, and dispatch characteristics. We also expect to grow through buying and selling a greater number of physical energy products and services to large energy customers. We expect to achieve operating efficiencies within our competitive supply operation and our generation fleet by selling more products through our existing sales force, benefiting from efficiencies of scale, adding to the capacity of existing plants, and making our business processes more efficient.

We expect BGE and our other retail energy service businesses to grow through focused and disciplined expansion primarily from new customers. At BGE, we are also focused on enhancing reliability and customer satisfaction.

Customer choice, regulatory change, and energy market conditions significantly impact our business. In response, we regularly evaluate our strategies with these goals in mind: to improve our competitive position, to anticipate and adapt to the business environment and regulatory changes, and to maintain a strong balance sheet and investment-grade credit quality.

We are constantly reevaluating our strategies and might consider:

- ◆ acquiring or developing additional generating facilities and gas properties to support our merchant energy business,
- ◆ mergers or acquisitions of utility or non-utility businesses or assets, and
- ◆ sale of assets or one or more businesses.

Business Environment

With the evolving regulatory environment surrounding customer choice, increasing competition, and the growth of our merchant energy business, various factors affect our financial results. We discuss some of these factors in more detail in the *Item 1. Business Competition* section. We also discuss these various factors in the *Forward Looking Statements* and *Item 1A. Risk Factors* sections.

Over the last several years, the energy markets have been highly volatile with significant changes in natural gas, power, oil, coal, and emission allowance prices. The volatility of the energy markets impacts our credit portfolio, and we continue to actively manage our credit portfolio to attempt to reduce the impact of a potential counterparty default. We discuss our customer (counterparty) credit and other risks in more detail in the *Market Risk* section.

In addition, the volatility of the energy markets impacts our liquidity and collateral requirements. We discuss our liquidity in the *Financial Condition* section.

Competition

We face competition in the sale of electricity, natural gas, and coal in wholesale energy markets and to retail customers.

Various states have moved to restructure their electricity markets. The pace of deregulation in these states varies based on historical moves to competition and responses to recent market events. While many states continue to support retail competition and industry restructuring, other states that were considering deregulation have slowed their plans or postponed consideration. In addition, other states are reconsidering deregulation.

All BGE electricity and gas customers have the option to purchase electricity and gas from alternate suppliers.

We discuss merchant competition in more detail in *Item 1. Business Competition* section.

The impacts of electric deregulation on BGE in Maryland are discussed in *Item 1. Business Electric Regulatory Matters and Competition* section.

Regulation Senate Bill 1

In June 2006, Senate Bill 1 was enacted, which, among other things:

- ◆ directs the Maryland PSC to conduct a comprehensive review of Maryland's deregulated electricity market, including the implications of requiring or allowing utilities to construct, acquire, or lease power generating facilities and alternative approaches to power procurement;
- ◆ expands the authority of the Maryland PSC to review acquisitions, dispositions, and financings by public service companies operating in Maryland; and
- ◆ directs Maryland's taxing authority to consider whether property tax valuation methodologies applied to power plants located in Maryland should be revised in light of the values of those properties in a restructured electric industry.

Because Senate Bill 1 requires additional decisions and proceedings by the Maryland PSC and other governmental authorities to implement and interpret many of its provisions, we cannot predict the ultimate impact of the legislation on us, BGE, or the energy market in Maryland. The new legislation and its implementation through applicable regulatory proceedings could have a material adverse effect on our, or BGE's, financial results. In addition, one or more parties may challenge in court one or more provisions of Senate Bill 1. The outcome of any challenges and the uncertainty that could result cannot be predicted.

We discuss the provisions of Senate Bill 1 relating to residential electric customer rates in *Item 1. Business Electric Regulatory Matters and Competition* section.

Regulation by the Maryland PSC

In addition to electric restructuring, which is discussed in *Item 1. Business Electric Regulatory Matters and Competition* section, regulation by the Maryland PSC significantly influences BGE's businesses. The Maryland PSC determines the rates that BGE can charge customers of its electric distribution and gas businesses. The Maryland PSC incorporates into BGE's standard offer service rates the transmission rates determined by the Federal Energy Regulatory Commission (FERC). BGE's electric rates are unbundled in customer billings to show separate components for delivery service (i.e. base rates), electric supply (commodity charge), transmission, a universal service surcharge, and certain taxes. The rates for BGE's regulated gas business continue to consist of a delivery charge (base rate) and a commodity charge.

Base Rates

Base rates are the rates the Maryland PSC allows BGE to charge its customers for the cost of providing them delivery service, plus a profit. BGE has both electric base rates and gas base rates. Higher electric base rates apply during the summer when the demand for electricity is higher. Gas base rates are not affected by seasonal changes.

BGE may ask the Maryland PSC to increase base rates from time to time. The Maryland PSC historically has allowed BGE to increase base rates to recover its utility plant investment and operating costs, plus a profit. Generally, rate increases improve the earnings of our regulated business because they allow us to collect more revenue. However, rate increases are normally granted based on historical data and those increases may not always keep pace with increasing costs. Other parties may petition the Maryland PSC to decrease base rates.

In December 2005, the Maryland PSC issued an order granting BGE a \$35.6 million annual increase in its gas base rates. In December 2006, the Baltimore City Circuit Court upheld the rate order. However, certain parties have filed an appeal with the Court of Special Appeals. We cannot provide assurance that the Maryland PSC's order will not be reversed in whole or part or that certain issues will not be remanded to the Maryland PSC for reconsideration.

Electric Commodity and Transmission Charges

BGE electric commodity and transmission charges (standard offer service), including the enactment of Senate Bill 1 in Maryland, are discussed in *Item 1. Business Electric Regulatory Matters and Competition* section.

Gas Commodity Charge

BGE charges its gas customers separately for the natural gas they purchase. The price BGE charges for the natural gas is based on a market-based rates incentive mechanism approved by the Maryland PSC. We discuss market-based rates in more detail in the *Regulated Gas Business Gas Cost Adjustments* section and in *Note 6*.

Federal Regulation

FERC

The FERC has jurisdiction over various aspects of our business, including electric transmission and wholesale natural gas and electricity sales. We believe that FERC's continued commitment to fair and efficient wholesale energy markets should continue to result in improvements to competitive markets across various regions.

Since 1997, operation of BGE's transmission system has been under the authority of PJM Interconnection (PJM), the Regional Transmission Organization (RTO) for the Mid-Atlantic region, pursuant to FERC oversight. As the transmission operator, PJM operates the energy markets and conducts day-to-day operations of the bulk power system. The liability of transmission owners, including BGE, and power generators is limited to those damages caused by the gross negligence of such entities.

In addition to PJM, RTOs exist in other regions of the country such as the Midwest, New York, and New England. In addition to operation of the transmission system and responsibility for transmission system reliability, these RTOs also operate energy markets for their region pursuant to FERC's oversight. Our merchant energy business participates in these regional energy markets. These markets are continuing to develop, and revisions to market structure are subject to review and approval by FERC. We cannot predict the outcome of any reviews at this time. However, changes to the structure of these markets could have a material effect on our financial results.

Ongoing initiatives at FERC have included a review of its methodology for the granting of market-based rate authority to sellers of electricity. FERC has announced interim tests that will be used to determine the extent to which companies may have market power in certain regions. Where market power is found to exist, FERC may require companies to implement measures to mitigate the market power in order to maintain market-based rate authority. In addition, FERC is reviewing other aspects of its granting of market-based rate authority, including horizontal and vertical market power, affiliate abuse, and barriers to entry. We cannot determine the eventual outcome of FERC's efforts in this regard and their impact on our financial results at this time.

In November 2004, FERC eliminated through and out transmission rates between the Midwest Independent System Operator (MISO) and PJM and put in place Seams Elimination Charge/Cost Adjustment/Assignment (SECA) transition rates, which are paid by the transmission customers of MISO and PJM and allocated among the various transmission owners in PJM and MISO. The SECA transition rates were in effect from December 1, 2004 through March 31, 2006. FERC set for hearing the various compliance filings that established the level of the SECA rates and

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

has indicated that the SECA rates are being recovered from the MISO and PJM transmission customers subject to refund by the MISO and PJM transmission owners.

In addition, FERC provided transmission customers that are charged the SECA rates with an opportunity to demonstrate that such charges should be shifted to their wholesale power suppliers. We are a recipient of SECA payments, payer of SECA charges, and supplier to whom such charges may be shifted. Administrative hearings regarding the SECA charges concluded in May 2006, and an initial decision from the FERC administrative law judge (ALJ) was issued in August 2006. The decision of the ALJ generally found in favor of reducing the overall SECA liability. The decision, if upheld, is expected to significantly reduce the overall SECA liability at issue in this proceeding. However, the ALJ also allowed SECA charges to be shifted to upstream suppliers, subject to certain adjustments. Therefore, certain charges could be shifted to our wholesale marketing, risk management, and trading operation. This decision will be reviewed by FERC. We are unable to predict the timing or final outcome of FERC's SECA rate proceeding. However, as the amounts collected under the SECA rates are subject to refund and the ultimate outcome of the proceeding establishing SECA rates is uncertain, the result of this proceeding may have a material effect on our financial results.

In April 2006, FERC issued an initial order approving PJM's proposal to restructure its capacity market. Such a restructuring would change how we are paid for generating plant capacity available to PJM. However, FERC found that certain elements of the proposal needed further development before FERC could issue a final order and encouraged the parties to the proceeding, including Constellation Energy, to continue to seek a negotiated resolution of the remaining issues. Subsequently,

settlement discussions were conducted among the parties that resulted in a settlement being approved by FERC in December 2006, subject to requests for rehearing and potential further judicial review. Currently, we cannot predict with certainty the capacity prices that will result from the restructuring, given that rules must still be developed, or the possible effect such prices will have on our, or BGE's, financial results.

In February 2007, FERC adopted Order No. 890, which reforms the open-access transmission regulatory framework. We are in the process of evaluating this rule and its possible effect on our, or BGE's, financial results.

Other market changes are routinely proposed and considered on an ongoing basis. Such changes will be subject to FERC's review and approval. We cannot predict the outcome of these proceedings or the possible effect on our, or BGE's, financial results at this time.

Federal Energy Legislation

The Energy Policy Act of 2005 (EPACT 2005) was enacted in August 2005. The legislation encourages investments in energy production and delivery infrastructure, including further development of competitive wholesale energy markets, and promotes the use of a diverse mix of fuels and renewable technologies to generate electricity, including federal support and tax incentives for clean coal, nuclear, and renewable power generation. Effective February 2006, the legislation repealed the Public Utility Holding Company Act of 1935 (PUHCA 1935).

In addition, EPACT 2005 significantly increased FERC's enforcement authority. There have been a number of FERC rulemaking proceedings that relate to the implementation of EPACT 2005 including proceedings relating to FERC's new responsibilities following the repeal of PUHCA 1935, its revised merger authority, its new authority over electric grid reliability, and its new authority with respect to addressing electric and gas market manipulation. FERC has moved expeditiously to implement its new authority under EPACT 2005 and has completed many of its rulemaking proceedings under EPACT 2005. Additional rulemaking remains to be completed, which could have a material impact on our, or BGE's, financial results.

There are also rulemakings required from other federal agencies, the outcome of which could affect our financial results, but we cannot at this time predict such outcome or the actual effect on our financial results.

Weather

Merchant Energy Business

Weather conditions in the different regions of North America influence the financial results of our merchant energy business. Weather conditions can affect the supply of and demand for electricity, gas, and fuels. Changes in energy supply and demand may impact the price of these energy commodities in both the spot market and the forward market, which may affect our results in any given period. Typically, demand for electricity and its price are higher in the summer and the winter, when weather is more extreme. The demand for and price of natural gas and oil are higher in the winter. However, all regions of North America typically do not experience extreme weather conditions at the same time, thus we are not typically exposed to the effects of extreme weather in all parts of our business at once.

BGE

Weather affects the demand for electricity and gas for our regulated businesses. Very hot summers and very cold winters increase demand. Mild weather reduces demand. Weather affects residential sales more than commercial and industrial sales, which are mostly affected by business needs for electricity and gas. The Maryland PSC approved a revenue decoupling mechanism which allows BGE to record a monthly adjustment to our regulated gas business revenues to eliminate the effect of abnormal weather patterns. We discuss this further in the *Regulated Gas Business Revenue Decoupling* section.

Other Factors

A number of other factors significantly influence the level and volatility of prices for energy commodities and related derivative products for our merchant energy business. These factors include:

- ◆ seasonal, daily, and hourly changes in demand,
- ◆ number of market participants,
- ◆ extreme peak demands,

- ◆ available supply resources,
- ◆ transportation and transmission availability and reliability within and between regions,
- ◆ location of our generating facilities relative to the location of our load-serving obligations,
- ◆ implementation of new market rules governing operations of regional power pools,
- ◆ procedures used to maintain the integrity of the physical electricity system during extreme conditions,
- ◆ changes in the nature and extent of federal and state regulations, and
- ◆ international supply and demand.

These factors can affect energy commodity and derivative prices in different ways and to different degrees. These effects may vary throughout the country as a result of regional differences in:

- ◆ weather conditions,
- ◆ market liquidity,
- ◆ capability and reliability of the physical electricity and gas systems,
- ◆ local transportation systems, and
- ◆ the nature and extent of electricity deregulation.

Other factors also impact the demand for electricity and gas in our regulated businesses. These factors include the number of customers and usage per customer during a given period. We use these terms later in our discussions of regulated electric and gas operations. In those sections, we discuss how these and other factors affected electric and gas sales during the periods presented.

The number of customers in a given period is affected by new home and apartment construction and by the number of businesses in our service territory.

Usage per customer refers to all other items impacting customer sales that cannot be measured separately. These factors include the strength of the economy in our service territory. When the economy is healthy and expanding, customers tend to consume more electricity and gas. Conversely, during an economic downturn, our customers tend to consume less electricity and gas.

Environmental Matters and Legal Proceedings

We discuss details of our environmental matters in *Note 12* and *Item 1. Business Environmental Matters* section. We discuss details of our legal proceedings in *Note 12*. Some of this information is about costs that may be material to our financial results.

Accounting Standards Adopted and Issued

We discuss recently adopted and issued accounting standards in *Note 1*.

Critical Accounting Policies

Our discussion and analysis of financial condition and results of operations is based on our consolidated financial statements that were prepared in accordance with accounting principles generally accepted in the United States of America. Management makes estimates and assumptions when preparing financial statements. These estimates and assumptions affect various matters, including:

- ◆ our reported amounts of revenues and expenses in our Consolidated Statements of Income,
- ◆ our reported amounts of assets and liabilities in our Consolidated Balance Sheets, and
- ◆ our disclosure of contingent assets and liabilities.

These estimates involve judgments with respect to numerous factors that are difficult to predict and are beyond management's control. As a result, actual amounts could materially differ from these estimates.

Management believes the following accounting policies represent critical accounting policies as defined by the Securities and Exchange Commission (SEC). The SEC defines critical accounting policies as those that are both most important to the portrayal of a company's financial condition and results of operations and require management's most difficult, subjective, or complex judgment, often as a result of the need to make estimates about the effect of matters that are inherently uncertain and may change in subsequent periods. We discuss our significant accounting policies, including those that do not require management to make difficult, subjective, or complex judgments or estimates, in *Note 1*.

Accounting for Derivatives

Our merchant energy business originates and acquires contracts for energy, other energy-related commodities, and related derivatives. We record merchant energy business revenues using two methods of accounting: accrual accounting and mark-to-market accounting. The accounting requirements for derivatives are governed by Statement of Financial Accounting Standard (SFAS) No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended, and applying those requirements involves the exercise of judgment in evaluating these provisions, as well as related implementation guidance and applying those requirements to complex contracts in a variety of commodities and markets.

Many fundamental customer contracts in our business, such as those associated with our load-serving activities, must be accounted for on an accrual basis. We may economically hedge these contracts with derivatives and elect cash-flow hedge accounting or apply the normal purchase and normal sale exception in order to match more closely the timing of the recognition of earnings from these transactions. We make these elections because we believe that accrual accounting provides the most transparent presentation to our shareholders of these business activities. If our commercial transactions or related hedges meet the definition of a derivative, we must comply with the provisions of SFAS No. 133 in order to use cash-flow hedge accounting or the normal purchase and normal sale exception. Qualifying for either of these accounting treatments requires ongoing compliance with specific, detailed documentation and other requirements that may be unrelated to the economics of the transactions or how the associated risks are managed. While we believe we have appropriate controls in place to comply with these requirements, the failure to meet all of those requirements, even inadvertently, may result in disqualifying the use of these accounting treatments for those transactions for any affected period until all such requirements are satisfied.

The exercise of management's judgment in using cash-flow hedge accounting or electing the normal purchase and sale exception versus mark-to-market accounting, including compliance with all of the associated qualification and documentation requirements, materially impacts our financial results with respect to timing of the recognition of earnings. In addition, interpretations of SFAS No. 133 could continue to evolve. If there is a future change in interpretation or a failure to meet the qualification and documentation requirements, contracts that currently are excluded from the provisions of SFAS No. 133 under the normal purchase and normal sale exception or for which changes in fair value are recorded in other comprehensive income under cash-flow hedge accounting could be deemed to no longer qualify for those accounting

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

treatments. If that were to occur, normal purchase and normal sale contracts could be required to be recorded on the balance sheet at fair value with changes in value recorded in the income statement, and changes in value of derivatives previously designated as cash-flow hedges could be required to be recorded in the income statement rather than in other comprehensive income.

We record revenues and fuel and purchased energy expenses from the sale or purchase of energy, energy-related products, and energy services under the accrual method of accounting in the period when we deliver or receive energy commodities, products, and services, or settle contracts. We use accrual accounting for our merchant energy and other nonregulated business transactions, including the generation or purchase and sale of electricity, gas, and coal as part of our physical delivery activities and for power, gas, and coal sales contracts that are not subject to mark-to-market accounting. Contracts that are eligible for accrual accounting include non-derivative transactions and derivatives that qualify for and are designated as normal purchases and normal sales of commodities that will be physically delivered.

The use of accrual accounting requires us to analyze contracts to determine whether they are non-derivatives or, if they are derivatives, whether they meet the requirements for designation as normal purchases and normal sales. For those derivative contracts that do not meet these criteria, we may also analyze whether they qualify for hedge accounting, including performing an evaluation of historical market price information to determine whether such contracts are expected to be highly effective in offsetting changes in cash flows from the risk being hedged. We record the fair value of derivatives for which we have

elected hedge accounting in Risk management assets and liabilities.

We use the mark-to-market method of accounting for derivative contracts for which we do not elect to use accrual accounting or hedge accounting. These mark-to-market activities include derivative contracts for energy and other energy-related commodities. Under the mark-to-market method of accounting, we record the fair value of these derivatives as mark-to-market energy assets and liabilities at the time of contract execution. We record the changes in mark-to-market energy assets and liabilities in our Consolidated Statements of Income.

Mark-to-market energy assets and liabilities consist of a combination of energy and energy-related derivative contracts. While some of these contracts represent commodities or instruments for which prices are available from external sources, other commodities and certain contracts are not actively traded and are valued using modeling techniques to determine expected future market prices, contract quantities, or both. The market prices and quantities used to determine fair value reflect management's best estimate considering various factors. However, future market prices and actual quantities will vary from those used in recording mark-to-market energy assets and liabilities, and it is possible that such variations could be material.

We record valuation adjustments to reflect uncertainties associated with certain estimates inherent in the determination of the fair value of mark-to-market energy assets and liabilities. The effect of these uncertainties is not incorporated in market price information or other market-based estimates used to determine fair value of our mark-to-market energy contracts. To the extent possible, we utilize market-based data together with quantitative methods for both measuring the uncertainties for which we record valuation adjustments and determining the level of such adjustments and changes in those levels.

We describe below the main types of valuation adjustments we record and the process for establishing each. Generally, increases in valuation adjustments reduce our earnings, and decreases in valuation adjustments increase our earnings. However, all or a portion of the effect on earnings of changes in valuation adjustments may be offset by changes in the value of the underlying positions.

◆ **Close-out adjustment** represents the estimated cost to close out or sell to a third-party open mark-to-market positions. This valuation adjustment has the effect of valuing long positions (the purchase of a commodity) at the bid price and short positions (the sale of a commodity) at the offer price. We compute this adjustment using a market-based estimate of the bid/offer spread for each commodity and option price and the absolute quantity of our net open positions for each year. The level of total close-out valuation adjustments increases as we have larger unhedged positions, bid-offer spreads increase, or market information is not available, and it decreases as we reduce our unhedged positions, bid-offer spreads decrease, or market information becomes available. To the extent that we are not able to obtain observable market information for similar contracts, the close-out adjustment is equivalent to the initial contract margin, thereby resulting in no gain or loss at inception. In the absence of observable market information, there is a presumption that the transaction price is equal to the market value of the contract, and therefore we do not recognize a gain or loss at inception. We recognize such gains or losses in earnings as we realize cash flows under the contract or when observable market data becomes available.

◆ **Credit-spread adjustment** for risk management purposes, we compute the value of our mark-to-market energy assets and liabilities using a risk-free discount rate. In order to compute fair value for financial reporting purposes, we adjust the value of our mark-to-market energy assets to reflect the credit-worthiness of each counterparty based upon either published credit ratings, or equivalent internal credit ratings and associated default probability percentages. We compute this adjustment by applying a default probability percentage to our outstanding credit exposure, net of collateral, for each counterparty. The level of this adjustment increases as our credit exposure to counterparties increases, the maturity terms of our transactions increase, or the credit ratings of our counterparties deteriorate, and it decreases when our credit exposure to counterparties decreases, the maturity terms of our transactions decrease, or the credit ratings of our counterparties improve.

Market prices for energy and energy-related commodities vary based upon a number of factors, and changes in market prices affect both the recorded fair value of our mark-to-market energy contracts and the level of future revenues and costs associated with accrual-basis activities. Changes in the value of our mark-to-market energy contracts will affect our earnings in the period of the change, while changes in forward market prices related to accrual-basis revenues and costs will affect our earnings in future periods to the extent those prices are realized. We cannot predict whether, or to what extent, the factors affecting market prices may change, but those changes could be material and could affect us either favorably or unfavorably. We discuss our market risk in more detail in the *Market Risk* section.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

The impact of derivative contracts on our revenues and costs is material and is affected by many factors, including:

- ◆ our ability to continue to designate and qualify derivative contracts for normal purchase and normal sale accounting or hedge accounting under the requirements of SFAS No. 133, as amended and as interpreted in supplemental guidance,
- ◆ potential volatility in earnings from ineffectiveness associated with derivatives subject to hedge accounting,
- ◆ potential volatility in earnings from derivative contracts that serve as economic hedges but do not meet the accounting requirements to qualify for normal purchase and normal sale accounting or hedge accounting,
- ◆ our ability to enter into new mark-to-market derivative origination transactions, and
- ◆ sufficient liquidity and transparency in the energy markets to permit us to record gains at inception of new derivative contracts because fair value is evidenced by quoted market prices, current market transactions, or other observable market information.

35

As discussed in *Note 1*, the Financial Accounting Standards Board (FASB) issued SFAS No. 157, *Fair Value Measurements*, which is effective January 1, 2008 and will affect our accounting for derivatives. SFAS No. 157 defines fair value, establishes a framework for measuring fair value, and expands disclosures for fair value measurements.

Evaluation of Assets for Impairment and Other Than Temporary Decline in Value

Long-Lived Assets

We are required to evaluate certain assets that have long lives (for example, generating property and equipment and real estate) to determine if they are impaired when certain conditions exist. SFAS No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, provides the accounting requirements for impairments of long-lived assets. We are required to test our long-lived assets for recoverability whenever events or changes in circumstances indicate that their carrying amount may not be recoverable. Examples of such events or changes are:

- ◆ a significant decrease in the market price of a long-lived asset,
- ◆ a significant adverse change in the manner an asset is being used or its physical condition,
- ◆ an adverse action by a regulator or legislature or an adverse change in the business climate,
- ◆ an accumulation of costs significantly in excess of the amount originally expected for the construction or acquisition of an asset,
- ◆ a current-period loss combined with a history of losses or the projection of future losses, or
- ◆ a change in our intent about an asset from an intent to hold to a greater than 50% likelihood that an asset will be sold or disposed of before the end of its previously estimated useful life.

For long-lived assets that are expected to be held and used, SFAS No. 144 provides that an impairment loss shall only be recognized if the carrying amount of an asset is not recoverable and exceeds its fair value. The carrying amount of an asset is not recoverable under SFAS No. 144 if the carrying amount exceeds the sum of the undiscounted future cash flows expected to result from the use and eventual disposition of the asset. Therefore, when we believe an impairment condition may have occurred, we are required to estimate the undiscounted future cash flows associated with a long-lived asset or group of long-lived assets at the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets and liabilities. This necessarily requires us to estimate uncertain future cash flows.

In order to estimate future cash flows, we consider historical cash flows and changes in the market environment and other factors that may affect future cash flows. To the extent applicable, the assumptions we use are consistent with forecasts that we are otherwise required to make (for example, in preparing our other earnings forecasts). If we are considering alternative courses of action to recover the carrying amount of a long-lived asset (such as the potential sale of an asset), we probability-weight the alternative courses of action to estimate the cash flows.

We use our best estimates in making these evaluations and consider various factors, including forward price curves for energy, fuel costs, and operating costs. However, actual future market prices and project costs could vary from the assumptions used in our estimates, and the impact of such variations could be material.

For long-lived assets that can be classified as assets held for sale under SFAS No. 144, an impairment loss is recognized to the extent their carrying amount exceeds their fair value less costs to sell.

If we determine that the undiscounted cash flows from an asset to be held and used are less than the carrying amount of the asset, or if we have classified an asset as held for sale, we must estimate fair value to determine the amount of any impairment loss. The estimation of fair value under SFAS No. 144, whether in conjunction with an asset to be held and used or with an asset held for sale, also involves judgment. We consider quoted market prices in active markets to the extent they are available. In the absence of such information, we may consider prices of similar assets, consult with brokers, or employ other valuation techniques. Often, we will discount the estimated future cash flows associated with the asset using a single interest rate that is commensurate with the risk involved with such an investment or employ an expected present value method that probability-weights a range of possible outcomes. The use of these methods involves the same inherent uncertainty of future cash flows as discussed above with respect to undiscounted cash flows. Actual future market prices and project costs could vary from those used in our estimates, and the impact of such variations could be material.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We are also required to evaluate our equity-method and cost-method investments (for example, in partnerships that own power projects) to determine whether or not they are impaired. Accounting Principles Board (APB) Opinion No. 18, *The Equity Method of Accounting for Investments in Common Stock*, provides the accounting requirements for these investments. The standard for determining whether an impairment must be recorded under APB No. 18 is whether the investment has experienced a loss in value that is considered an other than a temporary decline in value.

The evaluation and measurement of impairments under the APB No. 18 standard involves the same uncertainties as described above for long-lived assets that we own directly and account for in accordance with SFAS No. 144. Similarly, the estimates that we make with respect to our equity and cost-method investments are subject to variation, and the impact of such variations could be material. Additionally, if the projects in which we hold these investments recognize an impairment under the provisions of SFAS No. 144, we would record our proportionate share of that impairment loss and would evaluate our investment for an other than temporary decline in value under APB No. 18.

Gas Properties

We evaluate unproved property at least annually to determine if it is impaired under SFAS No. 19, *Financial Accounting and Reporting by Oil and Gas Producing Properties*. Impairment for unproved property occurs if there are no firm plans to continue drilling, lease expiration is at risk, or historical experience necessitates a valuation allowance.

Debt and Equity Securities

Our investments in debt and equity securities, primarily our nuclear decommissioning trust fund assets, are subject to impairment evaluations under FASB Staff Position SFAS 115-1 and SFAS 124-1 (FSP 115-1 and 124-1), *The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments*. FSP 115-1 and 124-1 requires us to determine whether a decline in fair value of an investment below the amortized cost basis is other than temporary. If we determine that the decline in fair value is judged to be other than temporary, the cost basis of the investment must be written down to fair value as a new cost basis.

Goodwill

Goodwill is the excess of the purchase price of an acquired business over the fair value of the net assets acquired. We account for goodwill and other intangibles under the provisions of SFAS No. 142, *Goodwill and Other Intangible Assets*. We do not amortize goodwill. SFAS No. 142 requires us to evaluate goodwill for impairment at least annually or more frequently if events and circumstances indicate the business might be impaired. Goodwill is impaired if the carrying value of the business exceeds fair value. Annually, we estimate the fair value of the businesses we have acquired using techniques similar to those used to estimate future cash flows for long-lived assets as discussed on the previous page, which involves judgment. If the estimated fair value of the business is less than its carrying value, an impairment loss is required to be recognized to the extent that the carrying value of goodwill is greater than its fair value.

Asset Retirement Obligations

We incur legal obligations associated with the retirement of certain long-lived assets. SFAS No. 143, *Accounting for Asset Retirement Obligations*, provides the accounting for legal obligations associated with the retirement of long-lived assets. We incur such legal obligations as a result of environmental and other government regulations, contractual agreements, and other factors. The application of this standard requires significant judgment due to the large number and diverse nature of the assets in our various businesses and the estimation of future cash flows required to measure legal obligations associated with the retirement of specific assets. FASB Interpretation (FIN) 47, *Accounting for Conditional Asset Retirement Obligations - an interpretation of FASB Statement No. 143*, clarifies that obligations that are conditional upon a future event are subject to the provisions of SFAS No. 143.

SFAS No. 143 requires the use of an expected present value methodology in measuring asset retirement obligations that involves judgment surrounding the inherent uncertainty of the probability, amount and timing of payments to settle these obligations, and the appropriate interest rates to discount future cash flows. We use our best estimates in identifying and measuring our asset retirement obligations in accordance with SFAS No. 143.

Our nuclear decommissioning costs represent our largest asset retirement obligation. This obligation primarily results from the requirement to decommission and decontaminate our nuclear generating facilities in connection with their future retirement. We utilize site-specific decommissioning cost estimates to determine our nuclear asset retirement obligations. However, given the magnitude of the amounts involved, complicated and ever-changing technical and regulatory requirements, and the very long time horizons involved, the actual obligation could vary from the assumptions used in our estimates, and the impact of such variations could be material.

Significant Events

Termination of Merger Agreement with FPL Group, Inc.

On October 24, 2006, Constellation Energy and FPL Group, Inc. (FPL Group) agreed to terminate the Agreement and Plan of Merger the parties had entered into on December 18, 2005. We discuss the merger termination agreement in more detail in *Note 15*.

Commodity Prices

During 2006, we continued to experience significant changes in commodity prices. This volatile commodity price environment continues to impact our results of operations and financial conditions. This volatility contributed to the following changes in our financial statements:

- ◆ total mark-to-market assets decreased \$510.3 million and total mark-to-market liabilities decreased \$796.9 million since December 31, 2005,
- ◆ total risk management assets decreased \$1,282.9 million and total risk management liabilities increased \$528.3 million since December 31, 2005,

- ◆ net cash collateral requirements increased \$630.6 million since December 31, 2005,
- ◆ accumulated other comprehensive loss increased \$1,088.1 million since December 31, 2005,
- ◆ total revenues increased \$2,316.6 million during 2006 compared to 2005, and
- ◆ total fuel and purchased energy expenses increased \$1,691.1 million during 2006 compared to 2005.

We discuss the impact of commodity prices on our financial condition and results of operations in more detail in the following sections:

- ◆ *Merchant Energy Results,*
- ◆ *Financial Condition,*
- ◆ *Contractual Payment Obligations and Committed Amounts, and*
- ◆ *Market Risk.*

Residential Electric Rates

We discuss Senate Bill 1 enacted by the Maryland General Assembly in more detail in the *Item 1. Business Electric Regulatory Matters and Competition and Regulation* sections.

Gas-Fired Plants

In December 2006, we completed the sale of several gas-fired plants for \$1.6 billion in cash, and recognized a pre-tax gain on the sale of \$259.0 million, or \$163.8 million after-tax. We discuss the sale in more detail in *Note 2*.

Synthetic Fuel Facilities

Our merchant energy business has investments in facilities that manufacture solid synthetic fuel produced from coal as defined under the Internal Revenue Code (IRC) for which we can claim tax credits on our Federal income tax return through 2007. The IRC provides for a phase-out of synthetic fuel tax credits if average annual wellhead oil prices increase above certain levels. For 2006, we estimate the tax credit reduction would begin if the reference price exceeds approximately \$55 per barrel and would be fully phased-out if the reference price exceeds approximately \$68 per barrel. We discuss how we determine the amount of phase-out in more detail in *Note 10*.

Based on monthly EIA published wellhead oil prices for the ten months ended October 31, 2006 and November and December NYMEX prices for light, sweet, crude oil (adjusted for the 2006 difference between EIA and NYMEX prices), we estimate a 38% tax credit phase-out in 2006. We recorded the effect of this phase-out estimate as a reduction in tax credits of \$44.3 million during 2006.

For 2007, we estimate the tax credit reduction would begin if the reference price exceeds approximately \$56 per barrel and would be fully phased-out if the reference price exceeds approximately \$70 per barrel. Based on forward market prices and volatilities as of February 22, 2007, we estimate a 21% tax credit phase-out in 2007. However, the ultimate amount of tax credits phased-out for 2007 is subject to change based on the actual reference price and production levels for the entire year. In addition, our ability to claim synthetic fuel tax credits and the potential phase-out of these credits could be materially impacted by any future legislative changes to the Internal Revenue Code.

We actively monitor and manage our exposure to synthetic fuel tax credit phase-out as part of our ongoing hedging activities. In addition, we continue to monitor various options related to our South Carolina facility, including the suspension or cessation of synthetic fuel production depending on our expectation of the level of tax credit phase-out.

We will continue to monitor the level of synthetic fuel tax credit phase-out based on forward market prices and volatilities and perform impairment analyses as warranted. A significant increase in synthetic fuel tax credit phase-out could result in an impairment. At December 31, 2006, the book value of our investment in synthetic fuel facilities is approximately \$14 million, substantially all of which is related to our South Carolina facility.

Workforce Reduction Costs

During the quarter ended March 31, 2006, we incurred costs associated with a planned workforce restructuring at our R. E. Ginna Nuclear Power Plant (Ginna). In July 2006, we announced a planned workforce restructuring at our Nine Mile Point Nuclear Station (Nine Mile Point). We also initiated a restructuring of the workforce at our Calvert Cliffs nuclear facility during the third quarter of 2006.

In addition, during 2006, we recorded a settlement charge in our Consolidated Statements of Income for one of our qualified plans under SFAS No. 88, *Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits*.

We discuss these restructurings and the settlement charge in more detail in *Note 2*.

Acquisitions

During 2006, we acquired working interests in gas and oil producing fields. We discuss this acquisition in more detail in the *Note 15*.

Initial Public Offering of Constellation Energy Partners LLC

In November 2006, Constellation Energy Partners LLC (CEP), a limited liability company formed by Constellation Energy, completed its initial public offering of common units. CEP is principally engaged in the acquisition, development, and exploitation of natural gas properties. CEP's existing property is located in the Robinson's Bend Field in the Black Warrior Basin of Alabama.

We discuss the impact of this initial public offering on our financial results in more detail in *Note 2*.

Nine Mile Point License Extension

In October 2006, we received Nuclear Regulatory Commission approval for license extension for both units at our Nine Mile Point nuclear facility. With the renewed licenses, we can continue to operate Unit 1 until 2029 and Unit 2 until 2046.

Ginna Uprate

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

During the fourth quarter of 2006, we completed a planned outage at our Ginna nuclear facility, which included an uprate of the plant from 498 megawatts to 581 megawatts. We expect that the increase in capacity of the facility will result in higher revenues in future years due to higher generation.

Dividend Increase

In January 2007, we announced an increase in our quarterly dividend to \$0.435 per share on our common stock. This is equivalent to an annual rate of \$1.74 per share. Previously, our quarterly dividend on our common stock was \$0.3775 per share, equivalent to an annual rate of \$1.51 per share.

38

Results of Operations

In this section, we discuss our earnings and the factors affecting them. We begin with a general overview, and then separately discuss earnings for our operating segments. Significant changes in other income and expense, fixed charges, and income taxes are discussed in the aggregate for all segments in the *Consolidated Nonoperating Income and Expenses* section.

Overview**Results**

	2006	2005 <i>(In millions, after-tax)</i>	2004
Merchant energy	\$ 580.1	\$ 359.4	\$ 358.0
Regulated electric	120.2	149.4	131.1
Regulated gas	37.0	26.7	22.2
Other nonregulated	11.3	0.4	(12.9)
Income from continuing operations and before cumulative effects of changes in accounting principles	748.6	535.9	498.4
Income from discontinued operations	187.8	94.4	41.3
Cumulative effects of changes in accounting principles		(7.2)	
Net Income	\$ 936.4	\$ 623.1	\$ 539.7
<i>Other Items Included in Operations:</i>			
Gain on sale of gas-fired plants	\$ 47.1	\$	\$
Non-qualifying hedges	39.2	(24.9)	0.2
Workforce reduction costs	(17.0)	(2.6)	(5.9)
Merger-related costs	(5.7)	(15.6)	
Recognition of 2003 synthetic fuel tax credits			35.9
Total Other Items	\$ 63.6	\$ (43.1)	\$ 30.2

Certain prior-year amounts have been reclassified to conform with the current year's presentation.

2006

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Our total net income for 2006 increased \$313.3 million, or \$1.69 per share, compared to 2005 mostly because of the following:

- ◆ We had higher earnings of approximately \$144 million after-tax at our merchant energy business due to higher gross margin from the Mid-Atlantic Region. We discuss this increase in gross margin in more detail in the *Mid-Atlantic Region* section.
- ◆ We had higher earnings from discontinued operations of \$93.4 million after-tax mostly due to the gain on sale of our High Desert facility. In addition, we had higher earnings of \$47.1 million resulting from the recognition of a gain on sale of five other gas-fired generating facilities. We discuss the sale of these plants in more detail in *Note 2*.
- ◆ We had higher wholesale competitive supply gross margin of approximately \$105 million after-tax. This increase was partially offset by approximately \$68 million after-tax of higher operating expenses mostly because of higher labor and benefit costs due to the growth of our wholesale competitive supply operation. We discuss our mark-to-market and wholesale accrual results in more detail in the *Competitive Supply* section.
- ◆ We had higher earnings of \$67.7 million after-tax at our retail competitive supply operation primarily due to an increase in gross margin, partially offset by higher operating expenses to support the growth of this operation. We discuss our retail gross margin in more detail in the *Competitive Supply Retail* section.
- ◆ We had higher earnings of approximately \$18 million after-tax due to the gain on the CEP initial public offering. This gain was partially offset by cash-flow hedge losses of approximately \$10 million after-tax reclassified from Accumulated other comprehensive income to revenues as a result of the initial public offering. We discuss the CEP transaction in more detail in *Note 2*.
- ◆ We had higher earnings of \$10.3 million after-tax from our regulated gas business primarily due to the favorable impact of the increase in gas base rates that was approved in December 2005.

These increases were partially offset by the following:

- ◆ We had lower earnings of \$30.1 million after-tax at our synthetic fuel facilities mostly due to the expected phase-out of tax credits as a result of the high price of oil. We discuss the phase-out of tax credits in more detail in the *Significant Events* section.
- ◆ We had lower earnings of \$29.2 million after-tax from our regulated electric business primarily due to higher operations and maintenance expenses and lower revenues less electricity purchased for resale expenses.
- ◆ We had lower earnings of \$14.4 million after-tax due to workforce reduction costs associated with workforce restructurings at our nuclear generating facilities. We discuss these costs in more detail in the *Note 2*.
- ◆ We had lower earnings of approximately \$11 million after-tax due to higher fixed charges and lower other income. We discuss these items in more detail in the *Consolidated Nonoperating Income and Expenses* section.

2005

Our total net income for 2005 increased \$83.4 million, or \$0.35 per share, compared to 2004 mostly because of the following:

- ◆ We had higher earnings of approximately \$58 million at our wholesale marketing, risk management, and trading operation. This increase is primarily due to the realization of higher gross margin, which included the termination or restructuring of several energy contracts and higher mark-to-market results in earnings. We discuss these terminations, restructurings, and mark-to-market results in more detail in the *Competitive Supply* section. This increase in earnings was partially offset by higher load-serving costs resulting from extreme weather and volatile commodity prices and higher operating expenses.

◆ We recorded higher income from discontinued operations of \$53.1 million after-tax. This increase is primarily due to a loss of \$49.1 million after tax in 2004 related to the sale of our Hawaiian geothermal facility which had a negative impact in that period. We discuss discontinued operations in more detail in *Note 2*.

39

- ◆ We had higher earnings of approximately \$34 million after-tax primarily due to higher interest and investment income due to a higher cash balance, and higher decommissioning trust asset earnings, and lower interest expense resulting from the maturity of \$300.0 million in long-term debt in 2005 and the favorable impact of floating-rate swaps.
- ◆ We had higher earnings of \$29.1 million after-tax at our Nine Mile Point and Ginna facilities primarily due to productivity improvements and cost saving initiatives partially offset by inflationary cost increases and costs associated with the planned refueling outage at Ginna.
- ◆ We had higher earnings of \$22.8 million after-tax at our regulated businesses primarily due to favorable weather during 2005 compared to 2004.
- ◆ We had higher earnings of approximately \$17 million after-tax due to the absence of coal delivery issues that were experienced in 2004 that had a negative impact in that period.
- ◆ We had higher earnings from our other nonregulated businesses of \$13.3 million after-tax, including higher gains from the continued liquidation of our non-core investments and the results of Cogenex, which was acquired in April 2005. We discuss the acquisition of Cogenex in more detail in *Note 15*.
- ◆ We had higher earnings at our South Carolina synthetic fuel facility of \$7.6 million after-tax due to a higher level of production in 2005 compared to 2004.

These increases were partially offset by the following:

- ◆ Our merchant energy business recognized \$35.9 million of 2003 synthetic fuel tax credits in 2004 which had a positive impact in that period.
- ◆ We had lower earnings at our retail competitive supply operation of \$25.1 million after-tax primarily due to higher costs to serve our load obligations in Texas and the absence of bankruptcy settlements that had a favorable impact in 2004.
- ◆ We had lower earnings of \$25.1 million after-tax related to losses associated with certain economic hedges that do not qualify for cash-flow hedge accounting treatment. We discuss these economic hedges in more detail in the *Mark-to-Market* section.
- ◆ We had lower earnings of \$15.6 million after-tax due to external costs associated with the execution of our merger agreement with FPL Group.
- ◆ We had lower earnings of \$20.0 million after-tax due to lower competitive transition charge (CTC) revenues at our merchant energy business.
- ◆ We had lower earnings of \$8.5 million after-tax related to the impact of expensing stock options during the fourth quarter of 2005.
- ◆ We had lower earnings of \$7.2 million after-tax due to the cumulative effect of adopting FIN 47 and SFAS No. 123 Revised (SFAS No. 123R), *Share-Based Payment*. We discuss the adoption of these standards in detail in *Note 1*.

Earnings per share was impacted by additional dilution, including the issuance of 6.0 million shares of common stock on July 1, 2004.

Merchant Energy Business

Background

Our merchant energy business is a competitive provider of energy solutions for various customers. We discuss the impact of deregulation on our merchant energy business in *Item 1. Business Competition* section.

Our merchant energy business focuses on delivery of physical, customer-oriented products to producers and consumers, manages the risk and optimizes the value of our owned generation assets, and uses our portfolio management and trading capabilities both to manage risk and to deploy risk capital to generate additional returns. We continue to identify and pursue opportunities which can generate additional returns through portfolio management and trading activities within our business. These opportunities have increased due to the significant growth in scale of our competitive supply operations.

We record merchant energy revenues and expenses in our financial results in different periods depending upon which portion of our business they affect. We discuss our revenue recognition policies in the *Critical Accounting Policies* section and in *Note 1*. We summarize our revenue and expense recognition policies as follows:

- ◆ We record revenues as they are earned and fuel and purchased energy expenses as they are incurred for contracts and activities subject to accrual accounting, including certain load-serving activities.
- ◆ Prior to the settlement of the forecasted transaction being hedged, we record changes in the fair value of contracts designated as cash-flow hedges in other comprehensive income to the extent that the hedges are effective. We record the effective portion of the changes in fair value of hedges in earnings in the period the settlement of the hedged transaction occurs. We record the ineffective portion of the changes in fair value of hedges, if any, in earnings in the period in which the change occurs.
- ◆ We record changes in the fair value of contracts that are subject to mark-to-market accounting in revenues or fuel and purchased energy expenses in the period in which the change occurs.

Mark-to-market accounting requires us to make estimates and assumptions using judgment in determining the fair value of certain contracts and in recording revenues from those contracts. We discuss the effects of mark-to-market accounting on our results in the *Competitive Supply Mark-to-Market* section. We discuss mark-to-market accounting and the accounting policies for the merchant energy business further in the *Critical Accounting Policies* section and in *Note 1*.

Our wholesale marketing, risk management, and trading operation actively transacts in energy and energy-related commodities in order to manage our portfolio of energy purchases and sales to customers through structured transactions. As part of these activities we trade energy and energy-related commodities and deploy risk capital in the management of our portfolio in order to earn additional returns. These activities are managed through daily value at risk and stop loss limits and liquidity guidelines, and may have a material impact on our financial results. We discuss the impact of our trading activities and value at risk in more detail in the *Competitive Supply Mark-to-Market* and *Market Risk* sections.

Results

	2006		2005		2004
			<i>(In millions)</i>		
Revenues	\$ 17,166.2		\$ 14,622.4		\$ 10,188.3

Certain prior-year amounts have been reclassified to conform with the current year's presentation. Above amounts include intercompany transactions eliminated in our Consolidated Financial Statements. Note 3 provides a reconciliation of operating results by segment to our Consolidated Financial Statements.

Revenues and Fuel and Purchased Energy Expenses

Our merchant energy business manages the revenues we realize from the sale of energy to our customers and our costs of procuring fuel and energy. As previously discussed, our merchant energy business uses either accrual or mark-to-market accounting to record our revenues and expenses. Mark-to-market results reflect the net impact of amounts recorded in either revenues or fuel and purchased energy expenses to recognize changes in fair value of derivative contracts subject to mark-to-market accounting during the reporting period.

The difference between revenues and fuel and purchased energy expenses, including all direct expenses, is the gross margin of our merchant energy business, and this measure is a useful tool for assessing the profitability of our merchant energy business. Accordingly, we believe it is appropriate to discuss the operating results of our merchant energy business by analyzing the changes in gross margin between periods. In managing our portfolio, we may terminate, restructure, or acquire contracts. Such transactions are within the normal course of managing our portfolio and may materially impact the timing of our recognition of revenues, fuel and purchased energy expenses, and cash flows.

We analyze our merchant energy gross margin in the following categories because of the risk profile of each category, differences in the revenue sources, and the nature of fuel and purchased energy expenses. With the exception of a portion of our competitive supply activities that we are required to account for using the mark-to-market method of accounting, all of these activities are accounted for on an accrual basis.

- ◆ **Mid-Atlantic Region** our fossil, nuclear, and hydroelectric generating facilities and load-serving activities in the PJM Interconnection (PJM) region. This also includes active portfolio management of the generating assets and other physical and financial contractual arrangements, as well as other PJM competitive supply activities. In addition, due to the expiration of its power purchase agreement, beginning in June 2006 until its sale in December 2006, the results of our University Park generating facility are included with the Mid-Atlantic Region. University Park was previously included in Plants with Power Purchase Agreements.
- ◆ **Plants with Power Purchase Agreements** our generating facilities outside the Mid-Atlantic Region with long-term power purchase agreements. As discussed in *Note 2*, the sale of the High Desert facility resulted in a reclassification of its results of operations to discontinued operations.
- ◆ **Wholesale Competitive Supply** our marketing, risk management, and trading operation that provides energy products and services primarily to distribution utilities, power generators, and other wholesale customers. We also provide global energy and related services and upstream and downstream natural gas services.
- ◆ **Retail Competitive Supply** our operation that provides electric and gas energy products and services to commercial, industrial, and governmental customers.
- ◆ **Other** our investments in qualifying facilities and domestic power projects and our generation operations and maintenance services.

In December 2006, we completed the sale of these gas-fired plants:

Facility	Capacity (MW)	Unit Type	Location
High Desert	830	Combined Cycle	California
Rio Nogales	800	Combined Cycle	Texas
Holland	665	Combined Cycle	Illinois
University Park	300	Peaking	Illinois
Big Sandy	300	Peaking	West Virginia
Wolf Hills	250	Peaking	Virginia

We discuss the sale of these gas-fired generating facilities in *Note 2*.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We provide a summary of our revenues, fuel and purchased energy expenses, and gross margin as follows:

	2006		2005		2004	
	(Dollar amounts in millions)					
Revenues:						
Mid-Atlantic Region	\$ 2,813.5		\$ 2,283.9		\$ 1,925.6	
Plants with Power Purchase Agreements	650.5		665.9		555.3	
Competitive Supply

Wholesale	722.1	25	547.7	24	240.4	12
Other	74.8	3	58.0	3	73.6	3
Total	\$ 2,909.9	100 %	\$ 2,320.6	100 %	\$ 2,070.2	100 %

Certain prior-year amounts have been reclassified to conform with the current year's presentation.

Mid-Atlantic Region

	2006		2005		2004
	(In millions)				
Revenues	\$ 2,813.5		\$ 2,283.9		\$ 1,925.6
Fuel and purchased energy expenses	(1,727.6))	(1,436.5))	(946.9)
Gross margin	\$ 1,085.9		\$ 847.4		\$ 978.7

The increase of \$238.5 million in gross margin in 2006 compared to 2005 is primarily due to approximately \$340 million in higher gross margin mostly from favorable portfolio management, including higher margins on existing contracts and new contracts that began in 2006.

Our wholesale marketing, risk management, and trading operation was awarded contracts in 2006 to supply a substantial portion of BGE's standard offer service obligation to residential customers beginning July 1, 2006 through May 31, 2007. The increase in gross margin included higher revenues from BGE of approximately \$256 million mostly from these new contracts during 2006 compared to 2005. This increase in gross margin was partially offset by the negative impact of higher expenses from serving the original BGE standard offer service obligation during the first six months of 2006 as variable costs, including emissions and coal, continued to increase. We discuss the expiration of the BGE residential rate freeze in more detail in the *Item 1. Business Electric Deregulation and Competition* section. Our wholesale marketing, risk management, and trading operation served fixed-price standard offer service obligations to BGE residential customers during the period from July 1, 2000 until July 1, 2006.

These increases in gross margin were partially offset by:

- ◆ lower CTC revenues of approximately \$64 million due to customers that completed their obligation and the continued decline in the CTC rate, and
- ◆ lower generation at Calvert Cliffs, which resulted in lower gross margin of approximately \$37 million, mostly because of a longer planned 2006 refueling outage that included replacement of the reactor vessel head.

The decrease in Mid-Atlantic Region gross margin in 2005 compared to 2004 is primarily due to rising commodity prices and hotter than normal weather during the third quarter of 2005, which resulted in higher load-serving costs. In addition, CTC revenues were \$33.1 million lower during 2005 compared to 2004. These decreases in gross margin were partially offset by the absence of coal delivery issues that we experienced in 2004 that had a negative impact in that period.

Plants with Power Purchase Agreements

	2006		2005		2004
			<i>(In millions)</i>		
Revenues	\$ 650.5		\$ 665.9		\$ 555.3
Fuel and purchased energy expenses	(67.9)		(72.5)		(46.4)
Gross margin	\$ 582.6		\$ 593.4		\$ 508.9

Gross margin from our Plants with Power Purchase Agreements decreased slightly in 2006 compared to the same periods of 2005. This was mostly due to approximately \$14 million in lower gross margin from the University Park facility. As discussed in the Revenues and Fuel and Purchased Energy Expenses section, the University Park power purchase agreement expired in May 2006. As a result, beginning in June 2006 until its sale in December 2006, the results of University Park are included in the Mid-Atlantic Region.

The increase in gross margin from our Plants with Power Purchase Agreements in 2005 compared to 2004 was primarily due to:

- ◆ higher gross margin of \$71.5 million from Ginna, which was acquired in June 2004. This increase in gross margin at Ginna includes an increase in revenues of \$76.9 million, and
- ◆ higher gross margin of \$39.0 million at our Nine Mile Point facility that benefited from higher generation primarily due to fewer refueling outage days, the absence of an unplanned outage that occurred in January 2004, and higher prices on the portion of our output sold into the wholesale market.

These increases in gross margin were partially offset by \$26.0 million primarily related to changes in commodity prices that had a negative impact on realized hedging activities related to the portion of these facilities sold into the wholesale market.

Competitive Supply

We analyze our retail accrual, wholesale accrual, and mark-to-market competitive supply activities below.

Retail

	2006	2005	2004
	<i>(In millions)</i>		
Accrual revenues	\$ 8,000.6	\$ 6,944.2	\$ 4,281.0
Fuel and purchased energy expenses	(7,577.0)	(6,688.4)	(4,011.4)
Retail accrual activities	423.6	255.8	269.6
Mark-to-market activities	20.9	18.3	(1.0)
Gross margin	\$ 444.5	\$ 274.1	\$ 268.6

The increase in accrual gross margin of \$167.8 million from our retail activities during 2006 compared to 2005 is primarily due to:

- ◆ approximately \$158 million in higher margins primarily due to higher electric rates and lower costs related to our fixed-price load-serving obligations as a result of milder weather in 2006 compared to the prior year, and
- ◆ approximately \$13 million in higher gross margin due to higher volumes, including 3.6 million more megawatt hours of electricity and 55 billion cubic feet more of natural gas served to retail customers during the year ended December 31, 2006 compared to 2005.

The decrease in gross margin from our retail competitive supply accrual activities in 2005 compared to 2004 is primarily due to:

- ◆ a combination of higher market prices for electricity, price volatility, and increased customer usage primarily in Texas resulting mostly from extreme summer weather, which increased our cost to serve our fixed-price load-serving obligations,
- ◆ the expiration of higher margin contracts, and
- ◆ the absence of favorable bankruptcy settlements, which had a positive impact in 2004.

These decreases were partially offset by serving approximately 20 million more megawatt hours in 2005 compared to 2004 mostly due to the growth of this operation.

Wholesale

	2006	2005	2004
	<i>(In millions)</i>		
Accrual revenues	\$ 5,232.7	\$ 4,281.8	\$ 3,253.7
Fuel and purchased energy expenses	(4,890.6)	(4,124.6)	(3,113.4)
Wholesale accrual activities	342.1	157.2	140.3
Mark-to-market activities	380.0	390.5	100.1
Gross margin	\$ 722.1	\$ 547.7	\$ 240.4

Our wholesale marketing, risk management, and trading operation had \$184.9 million of higher gross margin from accrual activities during 2006 compared to 2005 due to:

- ◆ an increase of approximately \$145 million primarily due to new contracts entered into during 2006 and higher realized gross margin on existing contracts, and
- ◆ an increase of approximately \$85 million primarily related to the growth in our coal and natural gas activities.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

These increases in gross margin were partially offset by the following:

- ◆ a decrease of \$24.8 million as a result of the initial public offering of CEP and the sale of our gas-fired plants. As a result of these transactions, forecasted transactions associated with cash-flow hedges were determined to be probable of not occurring, and the associated amounts previously recorded in Accumulated other comprehensive loss were reclassified into earnings, and
- ◆ a decrease of approximately \$20 million from contract restructurings related to unit contingent power purchase agreements during the year ended December 2006 compared to 2005. The termination and sale of these contracts has allowed us to eliminate our exposure to performance risk under these contracts.

Our wholesale marketing, risk management, and trading operation's accrual gross margin was \$16.9 million higher in 2005 compared to 2004 primarily due to newly originated and realized business in power, gas, and coal in 2005, including several contract terminations and restructurings. During 2005, we terminated or restructured several in-the-money contracts in exchange for upfront cash payments and a reduction or cancellation of future performance obligations. The termination or restructuring of two contracts allowed us to lower our exposure to performance risk under these contracts, and resulted in the realization of \$77.0 million of pre-tax earnings in 2005 that would have been recognized over the life of these contracts. These increases were partially offset by lower gross margins of approximately \$60 million mostly due to the absence of several favorable items, including settlements, power prices, and contracts that had a positive impact in 2004.

Mark-to-Market

Mark-to-market results include net gains and losses from origination, trading, and risk management activities for which we use the mark-to-market method of accounting. We discuss these activities and the mark-to-market method of accounting in more detail in the *Critical Accounting Policies* section and in *Note 1*.

As a result of the nature of our operations and the use of mark-to-market accounting for certain activities, mark-to-market earnings will fluctuate. We cannot predict these fluctuations, but the impact on our earnings could be material. We discuss our market risk in more detail in the *Market Risk* section. The primary factors that cause fluctuations in our mark-to-market results are:

- ◆ the number, size, and profitability of new transactions including terminations or restructuring of existing contracts,
- ◆ the number and size of our open derivative positions, and
- ◆ changes in the level and volatility of forward commodity prices and interest rates.

Mark-to-market results were as follows:

	2006	2005 <i>(In millions)</i>	2004
Unrealized mark-to-market results			
Origination gains	\$ 13.5	\$ 61.6	\$ 19.7
Risk management and trading mark-to-market			
Unrealized changes in fair value	387.4	347.2	79.4
Changes in valuation techniques			
Reclassification of settled contracts to realized	(372.1)	(257.7)	(85.4)
Total risk management and trading mark-to-market	15.3	89.5	(6.0)
Total unrealized mark-to-market*	28.8	151.1	13.7
Realized mark-to-market	372.1	257.7	85.4
Total mark-to-market results	\$ 400.9	\$ 408.8	\$ 99.1

* Total unrealized mark-to-market is the sum of origination transactions and total risk management and trading mark-to-market.

Origination gains arise primarily from contracts that our wholesale marketing, risk management, and trading operation structures to meet the risk management needs of our customers or relate to our trading activities. Transactions that result in origination gains may be unique and provide the potential for individually significant gains from a single transaction.

Origination gains represent the initial fair value recognized on these structured transactions. The recognition of origination gains is dependent on the existence of observable market data that validates the initial fair value of the contract. Origination gains arose primarily from:

- ◆ 3 transactions completed in 2006, of which no transaction contributed in excess of \$10 million pre-tax,
- ◆ 6 transactions completed in 2005, one of which contributed approximately \$35 million pre-tax, and
- ◆ 7 transactions completed in 2004, of which no transaction contributed in excess of \$10 million pre-tax.

As noted above, the recognition of origination gains is dependent on sufficient observable market data that validates the initial fair value of the contract. Liquidity and market conditions impact our ability to identify sufficient, objective market-price information to permit recognition of origination gains. As a result, while our strategy and competitive position provide the opportunity to continue to originate such transactions, the level of origination gains we are able to recognize may vary from year to year as a result of the number, size, and market-price transparency of the individual transactions executed in any period.

Risk management and trading mark-to-market represents both realized and unrealized gains and losses from changes in the value of our portfolio, including the recognition of gains associated with decreases in the close-out adjustment when we are able to obtain sufficient market price information. In addition, we use derivative contracts subject to mark-to-market accounting to manage our exposure to changes in market prices primarily as a result of our gas transportation and storage activities, while in general the underlying physical transactions related to our gas activities are accounted for on an accrual basis. We discuss the changes in mark-to-market results below. We show the relationship between our mark-to-market results and the change in our net mark-to-market energy asset on the next page.

Total mark-to-market results decreased \$7.9 million in 2006 compared to 2005 because of a decrease in origination gains of \$48.1 million, mostly offset by an increase in unrealized changes in fair value of \$40.2 million. Unrealized changes in fair value increased primarily due to higher pre-tax gains of approximately \$105 million related to the positive impact of certain economic hedges primarily related to gas transportation and storage contracts that do not qualify for or are not designated as cash-flow hedges. These mark-to-market results will be offset as we realize the related accrual load-serving positions in cash.

This increase in unrealized changes in fair value was partially offset by:

- ◆ a lower level of gains from risk management and trading mark-to-market activities of approximately \$45 million, and
- ◆ the absence of a \$19.5 million favorable impact related to changes in the close-out adjustment in 2006 compared to 2005. The close-out adjustments are determined by the change in open positions, new transactions where we did not have observable market price information, and existing transactions where we have now observed sufficient market

price information and/or we realized cash flows since the transactions inception. We discuss the close-out adjustment in more detail in the *Critical Accounting Policies* section.

Total mark-to-market results increased \$309.7 million in 2005 compared to 2004 due to:

- ◆ approximately \$260 million primarily related to a higher level of risk management and trading activities. Increases in our gas and coal activities, higher commodity price volatility, and greater market liquidity resulted in more opportunities to deploy risk capital and to earn additional returns in 2005 compared to 2004. These items resulted in an increased number of transactions that were entered into and realized during 2005 and a higher level of open positions that resulted in increased gains in 2005 compared to 2004. During 2005, slightly more than half of the mark-to-market results were derived from power, approximately one-third from gas, and the remainder from other transactions.
- ◆ \$41.9 million related to a higher level of origination gains as discussed above, and
- ◆ \$49.9 million related to the decrease in the close-out adjustment during 2005 compared to the prior year for transactions that we have now observed sufficient market price information and/or we realized cash flows since the transactions inception.

These increases in mark-to-market results were partially offset by the impact of \$41.5 million of higher mark-to-market losses on certain economic hedges that did not qualify for cash-flow hedge accounting treatment. Changing forward prices result in shifting value between accrual contracts and the associated mark-to-market positions of certain contracts in New England that contain fuel adjustment clauses and gas transportation contract hedges, producing a timing difference in the recognition of earnings on these transactions. These

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

mark-to-market hedges are economically effective; however, they do not qualify for cash-flow hedge accounting under SFAS No. 133. As a result, we recorded \$41.2 million of pre-tax losses in 2005 and \$0.3 million of pre-tax gains in 2004. These mark-to-market gains and losses will be offset as we realize the related accrual load-serving positions in cash.

Mark-to-Market Energy Assets and Liabilities

Our mark-to-market energy assets and liabilities are comprised of derivative contracts. While some of our mark-to-market contracts represent commodities or instruments for which prices are available from external sources, other commodities and certain contracts are not actively traded and are valued using other pricing sources and modeling techniques to determine expected future market prices, contract quantities, or both. We discuss our modeling techniques later in this section.

Mark-to-market energy assets and liabilities consisted of the following:

<i>At December 31,</i>	2006	2005
	<i>(In millions)</i>	
Current Assets	\$ 1,294.8	\$ 1,339.2
Noncurrent Assets	623.4	1,089.3
Total Assets	1,918.2	2,428.5
Current Liabilities	1,071.7	1,348.7
Noncurrent Liabilities	392.4	912.3
Total Liabilities	1,464.1	2,261.0
Net mark-to-market energy asset	\$ 454.1	\$ 167.5

The following are the primary sources of the change in net mark-to-market energy asset during 2006 and 2005:

	2006	2005
	<i>(In millions)</i>	
Fair value beginning of year	\$ 167.5	\$ 52.4
Changes in fair value recorded in earnings		
Origination gains	\$ 13.5	\$ 61.6
Unrealized changes in fair value	387.4	347.2
Changes in valuation techniques		
Reclassification of settled contracts to realized	(372.1)	(257.7)
Total changes in fair value recorded in earnings	28.8	151.1
Changes in value of exchange-listed futures and options	277.8	(119.9)
Net change in premiums on options	(29.8)	79.7
Contracts acquired		17.4
Other changes in fair value	9.8	(13.2)
Fair value at end of year	\$ 454.1	\$ 167.5

Changes in the net mark-to-market energy asset that affected earnings were as follows:

- ◆ Origination gains represent the initial unrealized fair value at the time these contracts are executed to the extent permitted by applicable accounting rules.
- ◆ Unrealized changes in fair value represent unrealized changes in commodity prices, the volatility of options on commodities, the time value of options, and other valuation adjustments.
- ◆ Changes in valuation techniques represent improvements in estimation techniques, including modeling and other statistical enhancements used to value our portfolio to reflect more accurately the economic value of our contracts.
- ◆ Reclassification of settled contracts to realized represents the portion of previously unrealized amounts settled during the period and recorded as realized revenues.

The net mark-to-market energy asset also changed due to the following items recorded in accounts other than in our Consolidated Statements of Income:

- ◆ Changes in value of exchange-listed futures and options are adjustments to remove unrealized revenue from exchange-traded contracts that are included in risk management revenues. The fair value of these contracts is recorded in Accounts receivable rather than Mark-to-market energy assets in our Consolidated Balance Sheets because these amounts are settled through our margin account with a third-party broker.
- ◆ Net changes in premiums on options reflects the accounting for premiums on options purchased as an increase in the net mark-to-market energy asset and premiums on options sold as a decrease in the net mark-to-market energy asset.
- ◆ Contracts acquired represents the initial fair value of acquired derivative contracts recorded in Mark-to-market energy assets.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

The settlement terms of our net mark-to-market energy asset and sources of fair value as of December 31, 2006 are as follows:

	2007	2008	Settlement Term				Thereafter	Fair Value
			2009	2010	2011	2012		
				<i>(In millions)</i>				
Prices provided by external sources (1)	\$ 192.7	\$ 205.5	\$ 6.1	\$ 27.0	\$ 5.4	\$ 8.7	\$ 3.4	\$ 448.8
Prices based on models	30.4	(0.9)	(1.0)	(13.6)	(6.9)	(5.3)	2.6	5.3
Total net mark-to-market energy asset	\$ 223.1	\$ 204.6	\$ 5.1	\$ 13.4	\$ (1.5)	\$ 3.4	\$ 6.0	\$ 454.1

(1) Includes contracts actively quoted and contracts valued from other external sources.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We manage our mark-to-market risk on a portfolio basis based upon the delivery period of our contracts and the individual components of the risks within each contract. Accordingly, we record and manage the energy purchase and sale obligations under our contracts in separate components based upon the commodity (e.g., electricity or gas), the product (e.g., electricity for delivery during peak or off-peak hours), the delivery location (e.g., by region), the risk profile (e.g., forward or option), and the delivery period (e.g., by month and year).

Consistent with our risk management practices, we have presented the information in the table above based upon the ability to obtain reliable prices for components of the risks in our contracts from external sources rather than on a contract-by-contract basis. Thus, the portion of long-term contracts that is valued using external price sources is presented under the caption "prices provided by external sources." This is consistent with how we manage our risk, and we believe it provides the best indication of the basis for the valuation of our portfolio. Since we manage our risk on a portfolio basis rather than contract-by-contract, it is not practicable to determine separately the portion of long-term contracts that is included in each valuation category. We describe the commodities, products, and delivery periods included in each valuation category in detail below.

The amounts for which fair value is determined using prices provided by external sources represent the portion of forward, swap, and option contracts for which price quotations are available through brokers or over-the-counter transactions. The term for which such price information is available varies by commodity, region, and product. The fair values included in this category are the following portions of our contracts:

- ◆ forward purchases and sales of electricity during peak and off-peak hours for delivery terms primarily through 2010, but up to 2012, depending upon the region,
- ◆ options for the purchase and sale of electricity during peak hours for delivery terms through 2008, depending upon the region,
- ◆ forward purchases and sales of electric capacity for delivery terms primarily through 2007, but up to 2008, depending on the region,
- ◆ forward purchases and sales of natural gas, coal, and oil for delivery terms through 2011, and
- ◆ options for the purchase and sale of natural gas, coal, and oil for delivery terms through 2008.

The remainder of the net mark-to-market energy asset is valued using models. The portion of contracts for which such techniques are used includes standard products for which external prices are not available and customized products that are valued using modeling techniques to determine expected future market prices, contract quantities, or both.

Modeling techniques include estimating the present value of cash flows based upon underlying contractual terms and incorporate, where appropriate, option pricing models and statistical and simulation procedures. Inputs to the models include:

- ◆ observable market prices,
- ◆ estimated market prices in the absence of quoted market prices,
- ◆ the risk-free market discount rate,
- ◆ volatility factors,
- ◆ estimated correlation of energy commodity prices, and
- ◆ expected generation profiles of specific regions.

Additionally, we incorporate counterparty-specific credit quality and factors for market price and volatility uncertainty and other risks in our valuation. The inputs and factors used to determine fair value reflect management's best estimates.

The electricity, fuel, and other energy contracts we hold have varying terms to maturity, ranging from contracts for delivery the next hour to contracts with terms of ten years or more. Because an active, liquid electricity futures market comparable to that for other commodities has not

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

developed, the majority of contracts used in the wholesale marketing, risk management, and trading operation are direct contracts between market participants and are not exchange-traded or financially settling contracts that can be readily liquidated in their entirety through an exchange or other market mechanism. Consequently, we and other market participants generally realize the value of these contracts as cash flows become due or payable under the terms of the contracts rather than through selling or liquidating the contracts themselves.

Consistent with our risk management practices, the amounts shown in the table above as being valued using prices from external sources include the portion of long-term contracts for which we can obtain reliable prices from external sources. The remaining portions of these long-term contracts are shown in the table as being valued using models. In order to realize the entire value of a long-term contract in a single transaction, we would need to sell or assign the entire contract. If we were to sell or assign any of our long-term contracts in their entirety, we may realize an amount different from the value reflected in the table. However, based upon the nature of the wholesale marketing, risk management, and trading operation, we generally expect to realize the value of these contracts, as well as any contracts we may enter into in the future to manage our risk, over time as the contracts and related hedges settle in accordance with their terms. In general, we do not expect to realize the value of these contracts and related hedges by selling or assigning the contracts themselves in total.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

The fair values in the table represent expected future cash flows based on the level of forward prices and volatility factors as of December 31, 2006 and could change significantly as a result of future changes in these factors. Additionally, because the depth and liquidity of the power markets vary substantially between regions and time periods, the prices used to determine fair value could be affected significantly by the volume of transactions executed.

Management uses its best estimates to determine the fair value of commodity and derivative contracts it holds and sells. These estimates consider various factors including closing exchange and over-the-counter price quotations, time value, volatility factors, and credit exposure. However, future market prices and actual quantities will vary from those used in recording mark-to-market energy assets and liabilities, and it is possible that such variations could be material.

Risk Management Assets and Liabilities

We record derivatives that qualify for designation as hedges under SFAS No. 133 in Risk management assets and liabilities in our Consolidated Balance Sheets. Our risk management assets and liabilities consisted of the following:

<i>At December 31,</i>	2006	<i>(In millions)</i>	2005
Current Assets	\$ 261.7		\$ 1,244.3
Noncurrent Assets	325.7		626.0
Total Assets	587.4		1,870.3
Current Liabilities	1,340.0		483.5
Noncurrent Liabilities	707.3		1,035.5
Total Liabilities	2,047.3		1,519.0
Net risk management (liability) asset	\$ (1,459.9)		\$ 351.3

The decrease in our net risk management asset of \$1.8 billion since December 31, 2005 was due primarily to decreases in power prices that reduced the fair value of our cash-flow hedge positions and the settlement of cash-flow hedges during 2006. A decrease in the fair value of our cash-flow hedges indicates an increase in value of the accrual positions to which these hedges are related.

Other

	2006	<i>(In millions)</i>	2005	2004
Revenues	\$ 74.8		\$ 58.0	\$ 73.6

Our merchant energy business holds up to a 50% voting interest in 24 operating domestic energy projects that consist of electric generation, fuel processing, or fuel handling facilities. Of these 24 projects, 17 are qualifying facilities that receive certain exemptions based on the facilities energy source or the use of a cogeneration process. Earnings from our investments were \$13.8 million in 2006, \$3.6 million in 2005, and \$18.0 million in 2004.

Our investment in qualifying facilities and domestic power projects consisted of the following:

Book Value at December 31,	2006	<i>(In millions)</i>	2005
Project Type			
Coal	\$ 125.7		\$ 127.8
Hydroelectric	55.1		55.9
Geothermal	40.5		43.7
Biomass	46.6		48.0
Fuel Processing	33.7		23.8
Solar	7.0		7.0
Total	\$ 308.6		\$ 306.2

We believe the current market conditions for our equity-method investments that own geothermal, coal, hydroelectric, and fuel processing projects provide sufficient positive cash flows to recover our investments. We continuously monitor issues that potentially could impact future profitability of these investments, including environmental and legislative initiatives. We discuss certain risks and uncertainties in more detail in

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

our *Forward Looking Statements* and *Item 1A. Risk Factors* sections. However, should future events cause these investments to become uneconomic, our investments in these projects could become impaired under the provisions of APB No. 18.

The ability to recover our equity- and cost-method investments that own biomass and solar projects is partially dependent upon subsidies from the State of California. Under the California Public Utility Act, subsidies currently exist in that the California Public Utilities Commission (CPUC) requires load-serving entities to identify a separate rate component to be collected from customers to fund the development of renewable resources technologies, including solar, biomass, and wind facilities. In addition, legislation in California requires that each load-serving entity increase its total procurement of eligible renewable energy resources by at least one percent per year so that 20% of its retail sales are procured from eligible renewable energy resources by 2017. The legislation also requires the California Energy Commission to award supplemental energy payments to load-serving entities to cover above-market costs of renewable energy.

Given the need for electric power and the desire for renewable resource technologies, we believe California will continue to subsidize the use of renewable energy to make these projects economical to operate. However, should the California legislation fail to adequately support the renewable energy initiatives, our equity-method investments in these types of projects could become impaired under the provisions of APB No. 18, and any losses recognized could be material.

Operating Expenses

Our merchant energy business operating expenses increased \$203.3 million in 2006 compared to 2005 mostly due to the following:

- ◆ an increase of \$139.2 million at our competitive supply operations primarily related to higher labor and benefit costs and the impact of inflation on other costs,

- ◆ an increase of \$22.7 million at our upstream gas operations, primarily due to acquisitions made in June 2005, and
- ◆ an increase of approximately \$18 million at our generating facilities, which includes higher expenses associated with longer planned outages, offset in part by lower expenses that resulted from our productivity initiatives.

Our merchant energy business operating expenses increased \$196.2 million in 2005 compared to 2004 mostly due to the following:

- ◆ an increase of \$101.8 million at our wholesale marketing, risk management, and trading operation due to an increase in compensation and benefit costs including our expanding gas and coal operations,
- ◆ an increase of \$81.5 million from Ginna, which was acquired in June 2004,
- ◆ an increase of \$26.5 million at our retail operation primarily related to a \$10.8 million increase in uncollectible expenses and a \$8.7 million increase in aggregator fees,
- ◆ an increase of \$17.3 million at our gas-fired generating facilities primarily due to increased corporate overhead expenses, and
- ◆ an increase of \$13.0 million at Calvert Cliffs primarily due to an increase in corporate overhead expenses, partially offset by fewer employees and a shorter refueling outage in 2005.

These increases in expense were partially offset by lower operating expenses of \$56.5 million at Nine Mile Point primarily due to lower refueling outage expenses and a lower number of employees and contractors.

Workforce Reduction Costs

Our merchant energy business recognized expenses associated with our workforce reduction efforts as discussed in more detail in *Note 2*.

Merger-Related Costs

We discuss costs related to the merger with FPL Group, which has been terminated, in *Note 15*.

Depreciation, Depletion, and Amortization Expense

Merchant energy depreciation, depletion, and amortization expenses increased \$28.5 million in 2005 compared to 2004 mostly due to:

- ◆ \$10.2 million related to our South Carolina synthetic fuel facility,
- ◆ \$8.8 million related to Ginna, which was acquired in June 2004, and
- ◆ \$6.0 million increase related to our 2005 investments in gas producing facilities.

Accretion of Asset Retirement Obligations

The increase in accretion expense of \$8.9 million in 2005 compared to 2004 is primarily due to Ginna which was acquired in June 2004 and the impact of normal compounding.

Taxes Other Than Income Taxes

Merchant energy taxes other than income taxes increased \$13.3 million in 2006 compared to 2005 mostly due to \$5.3 million related to higher gross receipts taxes at our retail competitive supply operation and \$3.1 million related to our working interests in gas producing properties.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Merchant energy taxes other than income taxes increased \$23.4 million in 2005 compared to 2004 mostly due to \$19.6 million related to higher gross receipts taxes at our retail electric operation and \$4.0 million related to property taxes for Ginna.

Regulated Electric Business

Our regulated electric business is discussed in detail in *Item 1. Business Electric Business* section.

Results

	2006		2005		2004
	<i>(In millions)</i>				
Revenues	\$ 2,115.9		\$ 2,036.5		\$ 1,967.7
Electricity purchased for resale expenses	(1,167.8))	(1,068.9))	(1,034.0)
Operations and maintenance expenses	(351.3))	(318.4))	(304.2)
Merger-related costs	(3.3))	(4.0))	
Depreciation and amortization	(181.5))	(185.8))	(194.2)
Taxes other than income taxes	(134.9))	(135.3))	(132.8)
Income from Operations	\$ 277.1		\$ 324.1		\$ 302.5
Net Income	\$ 120.2		\$ 149.4		\$ 131.1
<i>Other Items Included in Operations (after-tax)</i>					
Merger-related costs	\$ (0.8))	\$ (3.7))	\$

Above amounts include intercompany transactions eliminated in our

Consolidated Financial Statements. Note 3 provides a reconciliation of operating results by segment to our Consolidated Financial Statements.

Net income from the regulated electric business decreased \$29.2 million in 2006 compared to 2005 mostly because of the following:

- ◆ increased operations and maintenance expenses of \$19.9 million after-tax mostly due to higher labor and benefit costs and incremental costs associated with 2006 storms, and

- ◆ decreased revenues less electricity purchased for resale expenses of \$11.8 million after-tax.

Net income from the regulated electric business increased \$18.3 million in 2005 compared to 2004 mostly because of the following:

- ◆ increased revenues less electricity purchased for resale expenses of \$20.7 million after-tax,

- ◆ decreased depreciation and amortization expense of \$5.1 million after-tax, and

- ◆ increased other income primarily due to gains on the sales of land of \$3.6 million after-tax.

These favorable results were partially offset by the following:

- ◆ increased operations and maintenance expenses of \$8.7 million after-tax mostly due to higher labor and benefit costs and the impact of inflation on other costs, and
- ◆ merger-related transaction costs of \$3.7 million after-tax.

Electric Revenues

The changes in electric revenues in 2006 and 2005 compared to the respective prior year were caused by:

	2006	(In millions)	2005
Distribution volumes	\$ (40.9)	\$ 21.3
Standard offer service	433.7		38.8
Rate stabilization credits	(321.9)	
Total change in electric revenues from electric system sales	70.9		60.1
Other	8.5		8.7
Total change in electric revenues	\$ 79.4		\$ 68.8

Distribution Volumes

Distribution volumes are the amount of electricity that BGE delivers to customers in its service territory.

The percentage changes in our electric system distribution volumes, by type of customer, in 2006 and 2005 compared to the respective prior year were:

	2006		2005	
Residential	(6.4)%	3.4)%
Commercial	(0.6)	5.1	
Industrial	(7.5)	(6.4)

In 2006, we distributed less electricity to residential customers mostly due to milder weather and decreased usage per customer, partially offset by an increased number of customers. We distributed less electricity to commercial customers mostly due to milder weather, partially offset by an increased number of customers and increased usage per customer. We distributed less electricity to industrial customers mostly due to decreased usage per customer.

In 2005, we distributed more electricity to residential customers compared to 2004 mostly due to warmer summer weather and an increased number of customers. We distributed more electricity to commercial customers mostly due to increased usage per customer, an increased number of customers, and warmer summer weather. We distributed less electricity to industrial customers mostly due to decreased usage per customer.

Standard Offer Service

BGE provides standard offer service for customers that do not select an alternative supplier. We discuss the provisions of Maryland's Senate Bill 1 related to residential electric rates in the *Item 1. Business Electric Regulatory Matters and Competition* section.

Standard offer service revenues were higher in 2006 compared to 2005 mostly due to an increase to market prices in the standard offer service rates due to the expiration of the residential rate freeze in July 2006, partially offset by lower standard offer service volumes.

Standard offer service revenues increased in 2005 compared to 2004 mostly because of increased standard offer service volumes to residential customers and increased standard offer service rates for all customers partially offset by lower standard offer service volumes associated with those commercial and industrial customers that elected alternative suppliers beginning July 1, 2004.

Rate Stabilization Credits

As a result of Senate Bill 1, we are required to defer a portion of the full market rate increase during the eleven month period from July 1, 2006 until May 31, 2007 for recovery in the future. Therefore, the increase in standard offer service revenues is partially offset by rate stabilization credits in order to reduce rates for residential customers from market price to the approved increase of 15% in Senate Bill 1.

Electricity Purchased for Resale Expenses

Electricity purchased for resale expenses include the cost of electricity purchased for resale to our standard offer service customers. These costs do not include the cost of electricity purchased by delivery service only customers. The following table summarizes our regulated electricity purchased for resale expenses:

	2006	2005 <i>(In millions)</i>	2004
Actual costs	\$ 1,489.7	\$ 1,068.9	\$ 1,034.0
Deferral under rate stabilization plan	(321.9)		
Electricity purchased for resale expenses	\$ 1,167.8	\$ 1,068.9	\$ 1,034.0

Actual Costs

BGE s actual costs for electricity purchased for resale increased \$420.8 million in 2006 compared to 2005 due to higher contract prices to purchase electricity resulting from the expiration of contracts that were executed in 2000 as part of the implementation of electric deregulation in Maryland, partially offset by lower standard offer service volumes.

BGE s actual costs for electricity purchased for resale increased \$34.9 million in 2005 compared to 2004 mostly because of increased standard offer service volumes to residential customers and higher costs to serve all standard offer service customers, partially offset by lower electricity purchased for resale expenses associated with commercial and industrial customers that elected alternative suppliers beginning July 1, 2004.

Deferral under Rate Stabilization Plan

We defer the difference between our actual costs of electricity purchased for resale and what we are allowed to bill customers under Senate Bill 1. In 2006, we deferred \$321.9 million in electricity purchased for resale expenses. These deferred expenses, plus carrying charges, are included in Regulatory Assets (net) in our, and BGE s, Consolidated Balance Sheets. We discuss the provisions of Senate Bill 1 related to residential

electric rates in the *Item 1. Business Electric Regulatory Matters and Competition* section.

Electric Operations and Maintenance Expenses

Regulated electric operations and maintenance expenses increased \$32.9 million in 2006 compared to 2005 mostly due to higher labor and benefit costs and the impact of inflation on other costs and \$13.1 million of incremental distribution service restoration expenses associated with 2006 storms.

Regulated electric operations and maintenance expenses increased \$14.2 million in 2005 compared to 2004 mostly due to higher labor and benefit costs and the impact of inflation on other costs.

Merger-Related Transaction Costs

We discuss costs related to the merger with FPL Group, which has been terminated, in *Note 15*.

Electric Depreciation and Amortization Expense

Regulated electric depreciation and amortization expense decreased \$4.3 million in 2006 compared to 2005 mostly because of the absence of \$6.9 million amortization expense associated with certain software, partially offset by \$3.0 million related to additional property placed in service.

Regulated electric depreciation and amortization expense decreased \$8.4 million in 2005 compared to 2004 mostly because of the absence of \$12.6 million of accelerated amortization expense associated with certain information technology assets replaced in 2004, partially offset by \$4.2 million related to additional property placed in service.

Regulated Gas Business

Our regulated gas business is discussed in detail in *Item 1. Business Gas Business* section.

Results

	2006	2005	2004
	<i>(In millions)</i>		
Revenues	\$ 899.5	\$ 972.8	\$ 757.0
Gas purchased for resale expenses	(581.5)	(687.5)	(484.3)
Operations and maintenance expenses	(144.8)	(131.8)	(123.6)
Merger-related costs	(1.4)	(1.4)	()
Depreciation and amortization	(46.0)	(46.6)	(48.1)
Taxes other than income taxes	(33.8)	(33.1)	(32.1)
Income from Operations	\$ 92.0	\$ 72.4	\$ 68.9
Net Income	\$ 37.0	\$ 26.7	\$ 22.2
<i>Other Items Included in Operations (after-tax)</i>			
Merger-related costs	\$ (0.4)	\$ (1.3)	\$ ()

Above amounts include intercompany transactions eliminated in our Consolidated Financial Statements. Note 3 provides a reconciliation of operating results by segment to our Consolidated Financial Statements.

Net income from the regulated gas business increased \$10.3 million in 2006 compared to 2005 mostly due to increased revenues less gas purchased for resale expenses of \$19.8 million after-tax, which was primarily due to the increase in gas base rates that was approved by the Maryland PSC in December 2005. This increase was partially offset by higher operations and maintenance expenses of \$7.9 million after-tax.

Net income from our regulated gas business was about the same in 2005 compared to 2004.

Gas Revenues

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

The changes in gas revenues in 2006 and 2005 compared to the respective prior year were caused by:

	2006	<i>(In millions)</i>	2005
Distribution volumes	\$ (38.0)	\$ 3.9
Base rates	33.4		2.6
Revenue decoupling	28.4		2.5
Gas cost adjustments	(112.3)	129.1
Total change in gas revenues from gas system sales	(88.5)	138.1
Off-system sales	13.9		77.5
Other	1.3		0.2
Total change in gas revenues	\$ (73.3)	\$ 215.8

Distribution Volumes

The percentage changes in our distribution volumes, by type of customer, in 2006 and 2005 compared to the respective prior year were:

	2006		2005
Residential	(17.0)%	(1.3
Commercial	(13.3)	(9.0
Industrial	3.2		33.6

In 2006, we distributed less gas to residential and commercial customers compared to 2005 mostly due to milder weather and decreased usage per customer, partially offset by an increased number of customers. We distributed more gas to industrial customers mostly due to increased usage per customer.

In 2005, we distributed less gas to residential and commercial customers compared to 2004 mostly due to decreased usage per customer partially offset by colder winter weather and an increased number of customers. We distributed more gas to industrial customers mostly due to increased usage per customer.

Base Rates

In December 2005, the Maryland PSC issued an order granting BGE a \$35.6 million annual increase in its gas base rates. In December 2006, the Baltimore City Circuit Court upheld the rate order. However, certain parties have filed an appeal with the Court of Special Appeals. We cannot provide assurance that the Maryland PSC's order will not be reversed in whole or in part or that certain issues will not be remanded to the Maryland PSC for reconsideration.

Revenue Decoupling

The Maryland PSC allows us to record a monthly adjustment to our gas distribution revenues to eliminate the effect of abnormal weather patterns on our gas distribution volumes. This means our monthly gas distribution revenues are based on weather that is considered normal for the month and, therefore, are not affected by actual weather conditions.

Gas Cost Adjustments

We charge our gas customers for the natural gas they purchase from us using gas cost adjustment clauses set by the Maryland PSC as described in *Note 1*. However, under the market-based rates mechanism approved by the Maryland PSC, our actual cost of gas is compared to a market index (a measure of the market price of gas in a given period). The difference between our actual cost and the market index is shared equally between shareholders and customers.

Customers who do not purchase gas from BGE are not subject to the gas cost adjustment clauses because we are not selling gas to them. However, these customers are charged base rates to recover the costs BGE incurs to deliver their gas through our distribution system, and are included in the gas distribution volume revenues.

Gas cost adjustment revenues decreased in 2006 compared to 2005 because we sold less gas at lower prices.

Gas cost adjustment revenues increased in 2005 compared to 2004 because we sold more gas at higher prices.

Off-System Sales

Off-system gas sales are low-margin direct sales of gas to wholesale suppliers of natural gas. Off-system gas sales, which occur after BGE has satisfied its customers' demand, are not subject to gas cost adjustments. The Maryland PSC approved an arrangement for part of the margin from off-system sales to benefit customers (through reduced costs) and the remainder to be retained by BGE (which benefits shareholders). Changes in off-system sales do not significantly impact earnings.

Revenues from off-system gas sales increased in 2006 compared to 2005 because we sold more gas, partially offset by lower prices.

Revenues from off-system gas sales increased in 2005 compared to 2004 because we sold more gas at higher prices.

Gas Purchased For Resale Expenses

Gas purchased for resale expenses include the cost of gas purchased for resale to our customers and for off-system sales. These costs do not include the cost of gas purchased by delivery service only customers.

Gas purchased for resale expenses decreased \$106.0 million in 2006 compared to 2005 because we purchased less gas at lower prices.

Gas purchased for resale expenses increased in 2005 compared to 2004 because we purchased more gas at higher prices.

Gas Operations and Maintenance Expenses

Regulated gas operations and maintenance expenses increased \$13.0 million in 2006 compared to 2005 mostly due to higher labor and benefit costs and the impact of inflation on other costs.

Regulated gas operations and maintenance expenses increased \$8.2 million in 2005 compared to 2004 mostly due to higher compensation and benefit costs and the impact of inflation on other costs.

Merger-Related Transaction Costs

We discuss costs related to the merger with FPL Group, which has been terminated, in *Note 15*.

Other Nonregulated Businesses

Results

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

	2006	2005	2004
		<i>(In millions)</i>

Certain prior-year amounts have been reclassified to conform with the current year's presentation. Above amounts include intercompany transactions eliminated in our Consolidated Financial Statements. Note 3 provides a reconciliation of operating results by segment to our Consolidated Financial Statements.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Net income from our other nonregulated businesses decreased \$9.0 million in 2006 compared to 2005 primarily due to a \$19.7 million decrease in income from discontinued operations, partially offset by a \$10.7 million increase in net income from our remaining other nonregulated businesses, including an increase in net income from our continued liquidation of our real estate investments.

Net income from our other nonregulated businesses increased \$24.7 million in 2005 compared to 2004 primarily due to:

- ◆ a \$16.1 million after-tax gain on sale of Constellation Power International Investments, Ltd., which held our other nonregulated international investments, in October 2005, and
- ◆ a \$13.2 million after-tax increase in net income from the continued liquidation of our financial investments.

51

These increases were partially offset by \$4.9 million lower net income from our other nonregulated international investments due to their sale in October 2005. We discuss the sale of our other nonregulated international investments in more detail in *Note 2*.

In 2001, we decided to sell certain non-core assets and accelerate the exit strategies on other assets that we continued to hold and own. While our intent is to dispose of these remaining non-core assets, market conditions and other events beyond our control may affect the actual sale of these assets. In addition, a future decline in the fair value of these assets could result in losses that could have a material impact on our financial results.

Consolidated Nonoperating Income and Expenses

Gain on Initial Public Offering of CEP LLC

In November 2006, CEP, a limited liability company formed by Constellation Energy, completed an initial public offering of 5.2 million common units at \$21 per unit. As a result of the initial public offering of CEP, we recognized a pre-tax gain of \$28.7 million, or \$17.9 million after recording deferred taxes on the gain. We discuss the initial public offering of CEP in more detail in *Note 2*.

Other Income

Other income increased \$40.0 million in 2005 compared to 2004 primarily because of higher interest and investment income due to a higher cash balance and higher decommissioning trust asset earnings and gains on the sales of land at BGE.

Total other income at BGE increased \$12.3 million in 2005 compared to 2004 primarily due to approximately \$7 million of gains on the sales of land.

Fixed Charges

Total fixed charges increased \$18.5 million mostly because of a higher level of debt outstanding, including commercial paper borrowings, and higher interest rates in 2006 compared to 2005.

Total fixed charges decreased \$16.6 million in 2005 compared to 2004 mostly because of the benefit of lower interest rates due to interest rate swaps entered into during the third quarter of 2004 and a lower level of debt outstanding. We discuss the interest rate swaps in more detail in *Note 13*.

Total fixed charges for BGE increased \$9.1 million in 2006 compared to 2005 mostly because of a higher level of debt outstanding. Total fixed charges for BGE decreased \$2.7 million in 2005 compared to 2004 mostly because of a lower level of debt outstanding.

Income Taxes

The differences in income taxes result from a combination of the changes in income and the impact of the recognition of tax credits on the effective tax rate. We include an analysis of the changes in the effective tax rate in *Note 10*.

Total income taxes increased \$187.1 million in 2006 compared to 2005 primarily due to a higher level of pre-tax income, including the gain on sale of gas-fired plants and the gain on initial public offering of CEP, as well as a decrease in synthetic fuel tax credits. We discuss all of these events in the *Significant Events* section.

Total income taxes increased \$45.5 million in 2005 compared to 2004 primarily due to the recognition of \$35.9 million in synthetic fuel tax credits in 2004 related to 2003 production.

Total income taxes for BGE decreased \$17.7 million in 2006 compared to 2005 mostly due to lower pre-tax income.

Total income taxes for BGE increased \$17.4 million in 2005 compared to 2004 mostly due to higher pre-tax income.

Defined Benefit Obligations

We expect to contribute \$125 million to our pension plans in 2007.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

At December 31, 2006, we recorded a net after-tax charge to Accumulated other comprehensive income of \$93.9 million. This net after-tax charge was a result of the following:

- ◆ reducing our additional minimum pension liability, which resulted in an increase to Accumulated other comprehensive income of \$75.6 million, and
- ◆ the adoption of SFAS No. 158, *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 106 and 132(R)*, which resulted in a decrease to Accumulated other comprehensive income of \$169.5 million.

SFAS No. 158, discussed in *Note 1*, creates the potential for additional volatility in accumulated other comprehensive income. We discuss our defined benefit obligations in more detail in *Note 7*.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Financial Condition

Cash Flows

The following table summarizes our 2006 cash flows by business segment, as well as our consolidated cash flows for 2006, 2005, and 2004.

	2006 Segment Cash Flows			Consolidated Cash Flows		
	Merchant	Regulated	Other	2006	2005	2004

* Items are not allocated to the business segments because they are managed for the company as a whole.

Cash Flows from Operating Activities

Cash provided by operating activities was \$525.3 million in 2006 compared to \$627.2 million in 2005. This \$101.9 million decrease was primarily due to a decrease in non-cash adjustments to net income in 2006, partially offset by favorable changes in net income and working capital.

Non-cash adjustments to net income decreased by \$550.6 million in 2006 compared to 2005 primarily due to the change in deferred fuel costs of \$336.6 million related mostly to the deferred recovery of electricity purchased for resale under the BGE rate stabilization plan. We discuss the rate stabilization plan in more detail in the *Item 1. Business Electric Regulatory Matters and Competition* section and *Note 1*. In addition, our gains on the sale of gas-fired plants and discontinued operations increased \$177.6 million in 2006 compared to 2005. We discuss this in more detail in *Note 2*.

Changes in working capital had a negative impact of \$671.9 million on cash flow from operations in 2006 compared to a negative impact of \$775.3 million in 2005. The negative impact of \$671.9 million related to working capital was primarily due to the commodity price environment and increased risk management and trading activities that resulted in an increase of approximately \$630 million in net cash collateral requirements, primarily for requirements on exchange-settled transactions. This increase in cash collateral requirements was accompanied by a decrease in our letters of credit requirements.

Cash provided by operating activities was \$627.2 million in 2005 compared to \$1,086.8 million in 2004. Net income was higher by \$83.4 million in 2005 compared to 2004. Non-cash adjustments to net income were \$159.3 million lower in 2005 compared to 2004. The decrease in non-cash adjustments

to net income was primarily due to the reclassification of \$72.6 million of proceeds from derivative power sales contracts as financing activities under SFAS No. 149, *Amendment of FASB Statement No. 133 on Derivative and Hedging Activities* and \$63.9 million related to the impact of discontinued operations.

Changes in working capital had a negative impact of \$775.3 million on cash flow from operations in 2005 compared to a negative impact of \$319.6 million in 2004. The decrease of \$455.7 million was due to a \$598 million unfavorable change in working capital primarily related to our accounts receivable, accounts payable, and fuel stocks mostly due to higher commodity prices, increased value of emissions credits, and business growth. This was partially offset by an increase of \$142 million of net cash collateral received, which was also due to higher commodity prices.

Cash Flows from Investing Activities

Cash provided by investing activities was \$560.1 million in 2006 compared to cash used in investing activities \$1,174.0 million in 2005. The \$1,734.1 million favorable change in 2006 compared to 2005 was primarily due to the increase in proceeds from sale of gas-fired plants and discontinued operations of \$1,341.3 million and a decrease of \$333.9 million in cash paid for contract and portfolio acquisitions. We discuss contract and portfolio acquisitions in more detail below.

Cash used in investing activities was \$1,174.0 million in 2005 compared to \$1,152.7 million in 2004. The slight increase in cash used in investing activities was mostly due to \$336.2 million of cash paid for contract and portfolio acquisitions and \$82.8 million in issuances of loans receivable related primarily to a customer contract restructuring. We discuss contract and portfolio acquisitions in more detail below, and the customer contract restructuring is discussed in more detail in *Note 4*. These increases in cash used in 2005 compared to 2004 were partially offset by less cash paid for asset acquisitions and business combinations of \$220.1 million in 2005 compared to 2004 and an increase in cash proceeds from the sale of discontinued operations of \$216.7 million, primarily due to the sale of Oleander and our other nonregulated international investments in 2005 as discussed in more detail in *Note 2*.

Cash Flows from Financing Activities

Cash provided by financing activities was \$390.7 million in 2006 compared to \$653.5 million in 2005. The decrease of \$262.8 million in cash provided in 2006 compared to 2005 was primarily due to a decrease in proceeds from acquired contracts of \$805.6 million, a decrease in other financing activities of \$92.6 million, and a \$35.2 million increase in our dividends paid in 2006 compared to 2005. We discuss the proceeds from acquired contracts below. These decreases were partially offset by a net increase in cash related to changes in short-term borrowings and long-term debt of \$581.8 million and \$101.3 million in proceeds from the initial public offering of CEP.

Cash provided by financing activities was \$653.5 million in 2005 compared to \$50.9 million in 2004. The increase in 2005 compared to 2004 was mostly due to an increase in proceeds from contract and portfolio acquisitions of \$909.4 million. We discuss proceeds from contract and portfolio acquisitions in more detail below. This increase in cash provided by financing activities was partially offset by a reduction in proceeds from issuances of common stock, an increase in cash used for repayments of debt, and higher dividend payments in 2005 compared to 2004.

Contract and Portfolio Acquisitions

During 2006, 2005, and 2004, our merchant energy business acquired several pre-existing energy purchase and sale agreements, which generated significant cash flows at the inception of the contracts. These agreements had contract prices that differed from market prices at closing, which resulted in cash payments from the counterparty at the acquisition of the contract. We received net cash of \$219.0 million in 2006, \$690.7 million in 2005, and \$117.5 million in 2004 for various contract and portfolio acquisitions. We reflect the underlying contracts on a gross basis as assets or liabilities in our Consolidated Balance Sheets depending on whether they were at above- or below-market prices at closing; therefore, we have also reflected them on a gross basis in cash flows from investing and financing activities in our Consolidated Statements of Cash Flows as follows:

<i>Year ended December 31,</i>	2006	2005	2004
	<i>(In millions)</i>		
Financing activities proceeds from contract and portfolio acquisitions	\$ 221.3	\$ 1,026.9	\$ 117.5
Investing activities contract and portfolio acquisitions	(2.3)	(336.2)	
Cash flows from contract and portfolio acquisitions	\$ 219.0	\$ 690.7	\$ 117.5

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We record the proceeds we receive to acquire energy purchase and sale agreements as a financing cash inflow because it constitutes a prepayment for a portion of the market price of energy, which we will buy or sell over the term of the agreements and does not represent a cash inflow from current period operating activities. For those acquired contracts that are derivatives, we record the ongoing cash flows related to the contract with the counterparties as financing cash inflows in accordance with SFAS No. 149.

We discuss certain of these contract and portfolio acquisitions in more detail in *Note 4* and *Note 5*.

Security Ratings

Independent credit-rating agencies rate Constellation Energy's and BGE's fixed-income securities. The ratings indicate the agencies' assessment of each company's ability to pay interest, distributions, dividends, and principal on these securities. These ratings affect how much it will cost each company to sell these securities. Generally, the better the rating, the lower the cost of the securities to each company when they sell them.

The factors that credit rating agencies consider in establishing Constellation Energy's and BGE's credit ratings include, but are not limited to, cash flows, liquidity, business

54

risk profile, and the amount of debt as a component of total capitalization.

At the date of this report, our credit ratings were as follows:

	Standard & Poors Rating Group	Moody s Investors Service	Fitch- Ratings
Constellation Energy			
Commercial Paper	A-2	P-2	F-2
Senior Unsecured Debt	BBB+	Baa1	BBB+
BGE			
Commercial Paper	A-2	P-2	F-2
Mortgage Bonds	A	Baa1	A
Senior Unsecured Debt	BBB+	Baa2	A-
Trust Preferred Securities	BBB-	Baa3	BBB+
Preference Stock	BBB-	Ba1	BBB+

Available Sources of Funding

We continuously monitor our liquidity requirements and believe that our credit facilities and access to the capital markets provide sufficient liquidity to meet our business requirements. We discuss our available sources of funding in more detail below.

Constellation Energy

In addition to our cash balance, we have a commercial paper program under which we can issue short-term notes to fund our subsidiaries. At December 31, 2006, we had approximately \$4,550 million of credit under several facilities. These facilities include:

- ◆ a \$1.0 billion 364-day credit facility expiring October 2007,
- ◆ a \$200.0 million 364-day credit facility expiring December 2007,
- ◆ a \$1.5 billion five-year revolving credit facility that expires in March 2010,
- ◆ a \$1.1 billion five-year revolving credit facility that expires in November 2010, and
- ◆ a \$750.0 million five-year revolving credit facility that expires in November 2010.

We enter into these facilities to ensure adequate liquidity to support our operations. Currently, we use the facilities to issue letters of credit primarily for our merchant energy business. Additionally, we can borrow directly from the banks or use the facilities to allow the issuance of commercial paper with the exception of the \$1.0 billion 364-day facility, which only supports \$500.0 million of letters of credit and the \$200.0 million 364-day facility, which only supports letters of credit.

These revolving credit facilities allow the issuance of letters of credit up to \$4,050 million. At December 31, 2006, letters of credit that totaled \$1,648 million were issued under all of our facilities, which results in approximately \$2.9 billion of unused credit facilities.

We expect to fund future acquisitions with an overall goal of maintaining a strong investment grade credit profile.

Merchant Energy

In November 2006, we completed the initial public offering of CEP and received \$101.3 million of net cash proceeds. We discuss the initial public offering in more detail in *Note 2*. We may obtain additional cash by completing sales of our other natural gas properties. Our ability to complete these sales will depend on market conditions, and we cannot give assurances that these sales could be completed.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

On October 31, 2006, CEP entered into a \$200.0 million secured revolving credit facility. The credit facility will mature on October 31, 2010. We discuss this long-term facility in more detail in *Note 9*.

In December 2006, we completed the sale of our gas-fired plants and received \$1.6 billion in cash. The proceeds from the sale are expected to be applied to reduce debt and invest in our business or repurchase equity. We discuss this sale in more detail in *Note 2*.

BGE

BGE currently maintains a \$400.0 million five-year revolving credit facility expiring in 2011. BGE can borrow directly from the banks or use the facilities to allow commercial paper to be issued. As of December 31, 2006, BGE had no outstanding commercial paper, which results in \$400.0 million in unused credit facilities.

Pursuant to Senate Bill 1, BGE is permitted to recover deferred costs associated with the residential electric rate deferral by issuing rate stabilization bonds after January 1, 2007 that securitize the deferred costs. In December 2006, the Maryland PSC issued an order, which allows BGE to issue bonds in an aggregate principal amount of approximately \$630 million, subject to adjustment. We currently intend to issue such bonds in 2007. We discuss Senate Bill 1 in more detail in *Item 1. Business Electric Regulatory Matters and Competition* section.

Other Nonregulated Businesses

If we can get a reasonable value for our remaining real estate projects and other investments, additional cash may be obtained by selling them. Our ability to sell or liquidate assets will depend on market conditions, and we cannot give assurances that these sales or liquidations could be made.

Capital Resources

Our actual consolidated capital requirements for the years 2004 through 2006, along with the estimated annual amount for 2007, are shown in the table on the next page.

We will continue to have cash requirements for:

- ◆ working capital needs,
- ◆ payments of interest, distributions, and dividends,
- ◆ capital expenditures, and
- ◆ the retirement of debt and redemption of preference stock.

Capital requirements for 2007 and 2008 include estimates of spending for existing and anticipated projects. We continuously review and modify those estimates. Actual requirements may vary from the estimates included in the table on the next page because of a number of factors including:

- ◆ regulation, legislation, and competition,
- ◆ BGE load requirements,

- ◆ environmental protection standards,
- ◆ the type and number of projects selected for construction or acquisition,
- ◆ the effect of market conditions on those projects,
- ◆ the cost and availability of capital,
- ◆ the availability of cash from operations, and
- ◆ business decisions to invest in capital projects.

Our estimates are also subject to additional factors. Please see the *Forward Looking Statements* and *Item 1A. Risk Factors* sections.

	2004	2005	2006 (In millions)	2007
Nonregulated Capital Requirements:

Regulated Capital Requirements:				
Regulated electric	209	241	297	380
Regulated gas	56	50	63	60
Total regulated capital requirements	265	291	360	440
Total capital requirements	\$ 762	\$ 1,032	\$ 1,149	\$ 1,915

The table above does not include amounts related to pre-acquisition capital requirements but does include post-acquisition capital requirements. We discuss our acquisitions in more detail in Note 15.

As of the date of this report, we have not completed our 2008 capital budgeting process, but expect our 2008 capital requirements to be approximately \$1.7 billion.

Our environmental controls capital requirements are affected by new rules or regulations that require modifications to our facilities. Based on information currently available to us regarding recently issued regulations, we will install additional air emission control equipment at certain of our coal-fired generating facilities in Maryland and at co-owned coal-fired generating facilities in Pennsylvania. We estimate another \$800 million of capital spending from 2008-2011 for environmental controls. We discuss environmental matters in more detail in *Item 1. Business Environmental Matters*.

Capital Requirements

Merchant Energy Business

Our merchant energy business capital requirements consist of its continuing requirements, including expenditures for:

- ◆ improvements to generating plants,
- ◆ nuclear fuel costs,
- ◆ upstream gas investments,
- ◆ portfolio acquisitions and other investments,

- ◆ costs of complying with the Environmental Protection Agency (EPA), Maryland, and Pennsylvania environmental regulations and legislation, and
- ◆ enhancements to our information technology infrastructure.

Regulated Electric and Gas

Regulated electric and gas construction expenditures primarily include new business construction needs and improvements to existing facilities, including projects to improve reliability.

Funding for Capital Requirements

Merchant Energy Business

Funding for our merchant energy business is expected from internally generated funds. If internally generated funds are not sufficient to meet funding requirements, we have available sources from commercial paper issuances, issuances of long-term debt and equity, leases, and other financing activities.

The projects that our merchant energy business develops typically require substantial capital investment. Many of the qualifying facilities and independent power projects that we have an interest in are financed primarily with non-recourse debt that is repaid from the project's cash flows. This debt is collateralized by interests in the physical assets, major project contracts and agreements, cash accounts and, in some cases, the ownership interest in that project.

We expect to fund acquisitions with a mixture of debt and equity with an overall goal of maintaining a strong investment grade credit profile.

Regulated Electric and Gas

Funding for regulated electric and gas capital expenditures is expected from internally generated funds. If internally generated funds are not sufficient to meet funding requirements, we have available sources from commercial paper issuances, available capacity under credit facilities, the issuance of long-term debt, trust preferred securities, or preference stock, and/or from time to time equity contributions from Constellation Energy. We discuss BGE's planned issuance of rate stabilization bonds in the *Available Sources of Funding* section. BGE also participates in a cash pool administered by Constellation Energy as discussed in *Note 16*.

Other Nonregulated Businesses

Funding for our other nonregulated businesses is expected from internally generated funds. If internally generated funds are not sufficient to meet funding requirements, we have available sources from commercial paper issuances, issuances of long-term debt of Constellation Energy, sales of securities and assets, and/or from time to time equity contributions from Constellation Energy.

Our ability to sell or liquidate securities and non-core assets will depend on market conditions, and we cannot give assurances that these sales or liquidations could be made. We discuss our remaining non-core assets and market conditions in the *Results of Operations - Other Nonregulated Businesses* section.

Contractual Payment Obligations and Committed Amounts

We enter into various agreements that result in contractual payment obligations in connection with our business activities. These obligations primarily relate to our financing

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

arrangements (such as long-term debt, preference stock, and operating leases), purchases of capacity and energy to support the growth in our merchant energy business activities, and purchases of fuel and transportation to satisfy the fuel requirements of our power generating facilities.

Our total contractual payment obligations as of December 31, 2006, increased \$2.4 billion compared to 2005 primarily due to an increase in fuel and transportation obligations and long-term debt. Our fuel and transportation obligations increased mostly due to new coal contracts related to our merchant energy business. Our long-term debt increased mostly due to the issuance of BGE Notes, offset in part by repayments made during the year. We detail our contractual payment obligations as of December 31, 2006 in the following table:

2007	2008- 2009	2010- 2011	Payments Thereafter	Total
<i>(In millions)</i>				
Contractual Payment Obligations				
Long-term debt:1				
Nonregulated				
Principal	\$ 620.5	\$ 507.7	\$ 58.8	\$ 2,203.3
Interest	183.9	333.6	286.9	1,276.1
Total	804.4	841.3	345.7	3,479.4
BGE				
Principal	121.4	306.1	22.0	1,267.2
Interest	97.3	162.6	155.7	1,408.7
Total	218.7	468.7	177.7	2,675.9
BGE preference stock			190.0	190.0
Operating leases2	186.0	222.3	153.4	391.6
Purchase obligations:3				
Purchased capacity and energy4	367.1	755.5	271.8	526.0
Fuel and transportation	2,866.5	1,867.3	475.9	894.4
Other	103.2	68.0	9.6	26.1
Other noncurrent liabilities:				
Pension benefits5	128.8	71.5	144.0	344.3
Postretirement and post employment benefits6	35.2	81.1	91.5	290.7
Total contractual payment obligations	\$ 4,709.9	\$ 4,375.7	\$ 1,669.6	\$ 8,474.1
				\$ 19,229.3

1 Amounts in long-term debt reflect the original maturity date. Investors may require us to repay \$384.3 million early through put options and remarketing features. Interest on variable rate debt is included based on the December 31, 2006 forward curve for interest rates.

2 Our operating lease commitments include future payment obligations under certain power purchase agreements as discussed further in Note 11.

3 Contracts to purchase goods or services that specify all significant terms. Amounts related to certain purchase obligations are based on future purchase expectations which may differ from actual purchases.

4 Our contractual obligations for purchased capacity and energy are shown on a gross basis for certain transactions, including both the fixed payment portions of tolling contracts and estimated variable payments under unit-contingent power purchase agreements.

5 Amounts related to pension benefits reflect our current 5-year forecast for contributions for our qualified pension plans and participant payments for our nonqualified pension plans. Refer to Note 7 for more detail on our pension plans.

6 Amounts related to postretirement and postemployment benefits are for unfunded plans and reflect present value amounts consistent with the determination of the related liabilities recorded in our Consolidated Balance Sheets as discussed in Note 7.

Termination of Merger with FPL Group, Inc.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

In connection with the termination of the merger agreement with FPL Group, there are contingencies relating to certain types of transactions entered into prior to September 30, 2007. We discuss these contingencies in *Note 15*.

Liquidity Provisions

In many cases, customers of our merchant energy business rely on the creditworthiness of Constellation Energy. A decline below investment grade by Constellation Energy would negatively impact the business prospects of that operation.

We regularly review our liquidity needs to ensure that we have adequate facilities available to meet collateral requirements. This includes having liquidity available to meet margin requirements for our wholesale marketing, risk management, and trading operation and our retail competitive supply activities.

We have certain agreements that contain provisions that would require additional collateral upon credit rating decreases in the senior unsecured debt of Constellation Energy. Decreases in Constellation Energy's credit ratings would not trigger an early payment on any of our credit facilities.

Under counterparty contracts related to our wholesale marketing, risk management, and trading operation, we are obligated to post collateral if Constellation Energy's senior unsecured credit ratings declined below established contractual levels. Based on contractual provisions at December 31, 2006, we estimate that if Constellation Energy's senior unsecured debt were downgraded we would have the following additional collateral obligations:

Credit Ratings Downgraded to	Level Below Current Rating	Incremental Obligations	Cumulative Incremental Obligations
<i>(In millions)</i>			
BBB/Baa2	1	\$ 495	\$ 495
BBB-/Baa3	2	246	741
Below investment grade	3	547	1,288

Based on market conditions and contractual obligations at the time of a downgrade, we could be required to post collateral in an amount that could exceed the amounts specified above, which could be material. We discuss our credit ratings in the *Security Ratings* section and our credit facilities in the *Available Sources of Funding* section.

The credit facilities of Constellation Energy and BGE have limited material adverse change clauses that only consider a material change in financial condition and are not directly affected by decreases in credit ratings. If these clauses are invoked, the lending institutions can decline to make new advances or issue new letters of credit, but cannot accelerate the payment of existing amounts outstanding. The long-term debt indentures of Constellation Energy and BGE do not contain material adverse change clauses or financial covenants.

Certain credit facilities of Constellation Energy contain a provision requiring Constellation Energy to maintain a ratio of debt to capitalization equal to or less than 65%. At December 31, 2006, the debt to capitalization ratios as defined in the credit agreements were no greater than 48%. The credit agreement of BGE contains a provision requiring BGE to maintain a ratio of debt to capitalization equal to or less than 65%. At December 31, 2006, the debt to capitalization ratio for BGE as defined in this credit agreement was 49%. At December 31, 2006, no amount was outstanding under this agreement.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Failure by Constellation Energy, or BGE, to comply with these provisions could result in the acceleration of the maturity of the debt outstanding under these facilities. The credit facilities of Constellation Energy contain usual and customary cross-default provisions that apply to defaults on debt by Constellation Energy and certain subsidiaries over a specified threshold.

The BGE credit facility also contains usual and customary cross-default provisions that apply to defaults on debt by BGE over a specified threshold. The indenture pursuant to which BGE has issued and outstanding mortgage bonds provides that a default under any debt instrument issued under the indenture may cause a default of all debt outstanding under such indenture.

Constellation Energy also provides credit support to Calvert Cliffs, Nine Mile Point, and Ginna to ensure these plants have funds to meet expenses and obligations to safely operate and maintain the plants.

Pursuant to Senate Bill 1 and an order issued by the Maryland PSC, BGE is permitted to recover deferred costs associated with the residential electric rate deferral after January 1, 2007, including through the issuance of rate stabilization bonds that securitize the deferred costs. We discuss Senate Bill 1 in more detail in *Item 1. Business Electric Regulatory Matters and Competition* section and the rate stabilization bonds in *Available Sources of Funding* section.

We discuss our short-term credit facilities in *Note 8*, long-term debt in *Note 9*, lease requirements in *Note 11*, and commitments and guarantees in *Note 12*.

Off-Balance Sheet Arrangements

For financing and other business purposes, we utilize certain off-balance sheet arrangements that are not reflected in our Consolidated Balance Sheets. Such arrangements do not represent a significant part of our activities or a significant ongoing source of financing.

We use these arrangements when they enable us to obtain financing or execute commercial transactions on favorable terms. As of December 31, 2006, we have no material off-balance sheet arrangements including:

- ◆ guarantees with third-parties that are subject to the initial recognition and measurement requirements of FASB Interpretation No. 45, *Guarantors Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness to Others*,
- ◆ retained interests in assets transferred to unconsolidated entities,
- ◆ derivative instruments indexed to our common stock, and classified as equity, or
- ◆ variable interests in unconsolidated entities that provide financing, liquidity, market risk or credit risk support, or engage in leasing, hedging or research and development services.

At December 31, 2006, Constellation Energy had a total of \$11,277.3 million in guarantees outstanding, of which \$10,001.8 million related to our competitive supply activities. These amounts do not represent incremental consolidated Constellation Energy obligations; rather, they primarily represent parental guarantees of certain subsidiary obligations to third parties. These guarantees are put into place in order to allow our subsidiaries the flexibility needed to conduct business with counterparties without having to post other forms of collateral. While the stated limit of these guarantees is \$10,001.8 million, our calculated fair value of obligations for commercial transactions covered by these guarantees was \$2,190.6 million at December 31, 2006. If the parent company was required to fund these subsidiary obligations, the total amount based on December 31, 2006 market prices would be \$2,190.6 million. For those guarantees related to our mark-to-market energy or risk management liabilities, the fair value of the obligation is recorded in our Consolidated Balance Sheets. We believe it is unlikely that we would be required to perform or incur any losses associated with guarantees of our subsidiaries' obligations.

We discuss our other guarantees in *Note 12* and our significant variable interests in *Note 4*.

Market Risk

We are exposed to various risks, including, but not limited to, energy commodity price and volatility risk, credit risk, interest rate risk, equity price risk, foreign exchange risk, and operations risk. Our risk management program is based on established policies and procedures to manage these key business risks with a strong focus on the physical nature of our business. This program is predicated on a strong risk management culture combined with an effective system of internal controls.

The Audit Committee of the Board of Directors periodically reviews compliance with our risk parameters, limits and trading guidelines, and our Board of Directors has established a value at risk limit. We have a Risk Management Division that is responsible for monitoring the key business risks, enforcing compliance with risk management policies and risk limits, as well as managing credit risk. The Risk Management Division reports to the Chief Risk Officer (CRO) who provides regular risk management updates to the Audit Committee and the Board of Directors.

We have a Risk Management Committee (RMC) that is responsible for establishing risk management policies, reviewing procedures for the identification, assessment, measurement and management of risks, and the monitoring and reporting of risk exposures. The RMC meets on a regular basis and is chaired by the Vice Chairman of Constellation Energy & Chairman of Constellation Energy Commodities Group, and consists of our Chief Executive Officer, our Chief Financial Officer and Chief Administrative Officer, our Executive Vice President of Corporate Strategy and Retail Competitive Supply, the Co-Presidents & Chief Executive Officers of Constellation Energy Commodities Group, the President of Constellation Generation Group and the Chief Risk Officer. In addition, the CRO coordinates with the risk management committees at the major operating subsidiaries that meet regularly to identify, assess, and quantify material risk issues and to develop strategies to manage these risks.

Interest Rate Risk

We are exposed to changes in interest rates as a result of financing through our issuance of variable-rate and fixed-rate debt and certain related interest rate swaps. We may use derivative instruments to manage our interest rate risks.

In December 2006, in order to manage the exposure to fluctuations in interest rates on variable rate debt, CEP entered into a pay fixed and receive floating interest rate swap relating to \$16.5 million of its outstanding debt.

In July 2004, to optimize the mix of fixed and floating-rate debt, we entered into interest rate swaps relating to \$450.0 million of our long-term debt. These fair value hedges effectively convert our current fixed-rate debt to a floating-rate instrument tied to the three month London Inter-Bank Offered Rate. Including the \$450.0 million in interest rate swaps, approximately 14% of our long-term debt is floating-rate.

We discuss our use of derivative instruments to manage our interest rate risk in more detail in *Note 13*.

The following table provides information about our debt obligations that are sensitive to interest rate changes:

Principal Payments and Interest Rate Detail by Contractual Maturity Date

	2007	2008	2009	2010	2011	Thereafter	Total	Fair value at December 31, 2006
	<i>(Dollars in millions)</i>							
Long-term debt								
Variable-rate debt	\$	\$	\$	\$ 5.5	\$ 36.0	\$ 681.7	\$ 723.2	\$ 723.2
Average interest rate	%	%	%	6.63	3.55	5.50	5.52	%
Fixed-rate debt	\$ 741.9(A)	\$ 301.1	\$ 512.7	\$ 16.8	\$ 22.5	\$ 2,788.8	\$ 4,383.8	\$ 4,513.8
Average interest rate	6.47	6.09	6.13	6.60	6.63	6.41	6.55	%

(A) Amount excludes \$384.3 million of long-term debt that contains certain put options under which lenders could potentially require us to repay the debt prior to maturity of which \$136.9 million is classified as current portion of long-term debt in our Consolidated Balance Sheets and in our Consolidated Statements of Capitalization.

Commodity Risk

We are exposed to the impact of market fluctuations in the price and transportation costs of electricity, natural gas, coal, and other commodities. These risks arise from our ownership and operation of power plants, the load-serving activities of BGE and our competitive supply operations, and our origination, risk management, and trading activities. We discuss these risks separately for our merchant energy and our regulated businesses below.

Merchant Energy Business

Our merchant energy business is exposed to various risks in the competitive marketplace that may materially impact its financial results and affect our earnings. These risks include changes in commodity prices, imbalances in supply and demand, and operations risk.

Commodity Prices

Commodity price risk arises from:

- ◆ the potential for changes in the price of, and transportation costs for, electricity, natural gas, coal, and other commodities,
- ◆ the volatility of commodity prices, and
- ◆ changes in interest rates and foreign exchange rates.

A number of factors associated with the structure and operation of the energy markets significantly influence the level and volatility of prices for energy commodities and related derivative products. We use such commodities and contracts in our merchant energy business, and if we do not properly hedge the associated financial exposure, this commodity price volatility could affect our earnings. These factors include:

- ◆ seasonal, daily, and hourly changes in demand,
- ◆ extreme peak demands due to weather conditions,
- ◆ available supply resources,
- ◆ transportation availability and reliability within and between regions,
- ◆ location of our generating facilities relative to the location of our load-serving obligations,
- ◆ procedures used to maintain the integrity of the physical electricity system during extreme conditions,
- ◆ changes in the nature and extent of federal and state regulations, and
- ◆ geopolitical concerns affecting global supply of oil and natural gas.

These factors can affect energy commodity and derivative prices in different ways and to different degrees. These effects may vary throughout the country as a result of regional differences in:

- ◆ weather conditions,
- ◆ market liquidity,
- ◆ capability and reliability of the physical electricity and gas systems, and
- ◆ the nature and extent of electricity deregulation.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Additionally, we have fuel requirements that are subject to future changes in coal, natural gas, and oil prices. Our power generation facilities purchase fuel under contracts or in the spot market. Fuel prices may be volatile, and the price that can be obtained from power sales may not change at the same rate or in the same direction as changes in fuel costs. This could have a material adverse impact on our financial results.

Supply and Demand Risk

We are exposed to the risk that available sources of supply may differ from the amount of power demanded by our customers

59

under fixed-price load-serving contracts. During periods of high demand, our power supplies may be insufficient to serve our customers' needs and could require us to purchase additional energy at higher prices. Alternatively, during periods of low demand, our power supplies may exceed our customers' needs and could result in us selling that excess energy at lower prices. Either of those circumstances could have a negative impact on our financial results.

We are also exposed to variations in the prices and required volumes of natural gas, oil, and coal we burn at our power plants to generate electricity. During periods of high demand on our generation assets, our fuel supplies may be insufficient and could require us to procure additional fuel at higher prices. Alternatively, during periods of low demand on our generation assets, our fuel supplies may exceed our needs, and could result in us selling the excess fuels at lower prices. Either of these circumstances will have a negative impact on our financial results.

Operations Risk

Operations risk is the risk that a generating plant will not be available to produce energy and the risks related to physical delivery of energy to meet our customers' needs. If one or more of our generating facilities is not able to produce electricity when required due to operational factors, we may have to forego sales opportunities or fulfill fixed-price sales commitments through the operation of other more costly generating facilities or through the purchase of energy in the wholesale market at higher prices. We purchase power from generating facilities we do not own. If one or more of those generating facilities were unable to produce electricity due to operational factors, we may be forced to purchase electricity in the wholesale market at higher prices. This could have a material adverse impact on our financial results.

Our nuclear plants produce electricity at a relatively low marginal cost. The Nine Mile Point facility sells 90% of its output under unit-contingent power purchase agreements (we have no obligation to provide power if the units are not available) to the previous owners. Based on its new capacity, beginning in 2007, we will sell approximately 80% of Ginna's output under a unit-contingent power purchase agreement to the former owners. However, if an unplanned outage were to occur at Calvert Cliffs during periods when demand was high, we may have to purchase replacement power at potentially higher prices to meet our obligations, which could have a material adverse impact on our financial results.

Risk Management and Trading

As part of our overall portfolio, we manage the commodity price risk of our competitive supply activities and our electric generation facilities, including power sales, fuel and energy purchases, emission credits, interest rate and foreign currency risks, weather risk, and the market risk of outages. In order to manage these risks, we may enter into fixed-price derivative or non-derivative contracts to hedge the variability in future cash flows from forecasted sales and purchases of energy, including:

- ◆ forward contracts, which commit us to purchase or sell energy commodities in the future;
- ◆ futures contracts, which are exchange-traded standardized commitments to purchase or sell a commodity or financial instrument, or to make a cash settlement, at a specific price and future date;
- ◆ swap agreements, which require payments to or from counterparties based upon the differential between two prices for a predetermined contractual (notional) quantity; and
- ◆ option contracts, which convey the right to buy or sell a commodity, financial instrument, or index at a predetermined price.

The objectives for entering into such hedges include:

- ◆ fixing the price for a portion of anticipated future electricity sales at a level that provides an acceptable return on our electric generation operations,
- ◆ fixing the price of a portion of anticipated fuel purchases for the operation of our power plants,
- ◆ fixing the price for a portion of anticipated energy purchases to supply our load-serving customers, and
- ◆ managing our exposure to interest rate risk and foreign currency exchange risks.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

The portion of forecasted transactions hedged may vary based upon management's assessment of market, weather, operational, and other factors.

While some of the contracts we use to manage risk represent commodities or instruments for which prices are available from external sources, other commodities and certain contracts are not actively traded and are valued using other pricing sources and modeling techniques to determine expected future market prices, contract quantities, or both. We use our best estimates to determine the fair value of commodity and derivative contracts we hold and sell. These estimates consider various factors including closing exchange and over-the-counter price quotations, time value, volatility factors, and credit exposure. However, it is likely that future market prices could vary from those used in recording mark-to-market energy assets and liabilities, and such variations could be material.

We measure the sensitivity of our wholesale marketing and risk management mark-to-market energy contracts to potential changes in market prices using value at risk. Value at risk is a statistical model that attempts to predict risk of loss based on historical market price volatility. We calculate value at risk using a historical variance/covariance technique that models option positions using a linear approximation of their value. Additionally, we estimate variances and correlation using historical commodity price changes over the most recent rolling three-month period. Our value at risk calculation includes all wholesale marketing and risk management mark-to-market energy assets and liabilities, including contracts for energy commodities and derivatives that result in physical settlement and contracts that require cash settlement.

The value at risk calculation does not include market risks associated with activities that are subject to accrual accounting, primarily our generating facilities and our competitive supply load-serving activities. We manage these risks by monitoring our fuel and energy purchase requirements and our estimated contract sales volumes compared to associated supply arrangements. We also engage in hedging activities to manage these risks. We describe those risks and our hedging activities earlier in this section.

60

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

The value at risk amounts below represent the potential pre-tax loss in the fair value of our wholesale marketing and risk management mark-to-market energy assets and liabilities over one and ten-day holding periods.

Total Wholesale Value at Risk
For the year ended December 31,

	2006	2005
	<i>(In millions)</i>	
99% Confidence Level, One-Day Holding Period		
Year end	\$ 13.4	\$ 10.0
Average	16.7	6.1
High	28.0	14.5
Low	9.6	2.4
95% Confidence Level, One-Day Holding Period		
Year end	\$ 10.2	\$ 7.6
Average	12.7	4.7
High	21.3	11.0
Low	7.3	1.8
95% Confidence Level, Ten-Day Holding Period		
Year end	\$ 32.3	\$ 24.1
Average	40.2	14.7
High	67.4	34.9
Low	23.0	5.8

Based on a 99% confidence interval, we would expect a one-day change in the fair value of the portfolio greater than or equal to the daily value at risk approximately once in every 100 days. In 2006, we did not experience any instance where the actual daily mark-to-market change in portfolio value exceeded the predicted value at risk. However, published market studies conclude that exceeding daily value at risk less than seven times in a one-year period is considered consistent with a 99% confidence interval.

The table above is the value at risk associated with our wholesale marketing, risk management, and trading operations mark-to-market energy assets and liabilities, including both trading and non-trading activities. We experienced higher value at risk for the year ended December 31, 2006 compared to the year ended December 31, 2005, primarily due to a higher number of economic hedges of accrual positions and an increase in our trading activities discussed below. We discuss our mark-to-market results in more detail in the *Competitive Supply* section.

The following table details our value at risk for the trading portion of our wholesale marketing and risk management mark-to-market energy assets and liabilities over a one-day holding period at a 99% confidence level for 2006 and 2005:

Wholesale Trading Value at Risk
For the year ended December 31,

	2006	2005
	<i>(In millions)</i>	
Average	\$ 11.2	\$ 5.5
High	17.6	13.3

We experienced higher value at risk for the year ended December 31, 2006 compared to the year ended December 31, 2005, for the trading portion of our wholesale trading portfolio due to increased commodity prices, volatility, and trading activity. Our trading positions can be used to manage the commodity price risk of our competitive supply activities and our generation facilities. We also engage in trading activities for profit. These activities are managed through daily value at risk and stop loss limits and liquidity guidelines.

Due to the inherent limitations of statistical measures such as value at risk and the seasonality of changes in market prices, the value at risk calculation may not reflect the full extent of our commodity price risk exposure. Additionally, actual changes in the value of options may differ from the value at risk calculated using a linear approximation inherent in our calculation method. As a result, actual changes in the fair value of mark-to-market energy assets and liabilities could differ from the calculated value at risk, and such changes could have a material impact on our financial results.

Regulated Electric Business

BGE's residential base rates were frozen for the six-year period ended June 30, 2006, and its commercial and industrial base rates were frozen for a four-year period that ended June 30, 2004. The commodity and transmission components of rates were frozen for different time periods depending on the customer type and service options selected by customers.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Our wholesale marketing, risk management, and trading operation provided BGE 100% of the energy and capacity to meet its residential standard offer service obligations through June 30, 2006. Bidding to supply BGE's standard offer service to all customers will occur from time to time through a competitive bidding process approved by the Maryland PSC. Our wholesale marketing, risk management, and trading operation is supplying a portion of BGE's standard offer service obligation to all customers. We discuss standard offer service and the impact on base rates in more detail in *Item 1. Business - Electric Business* section.

BGE may receive performance assurance collateral from suppliers to mitigate suppliers' credit risks in certain circumstances. Performance assurance collateral is designed to protect BGE's potential exposure over the term of the supply contracts and will fluctuate to reflect changes in market prices. In addition to the collateral provisions, there are supplier step-up provisions, where other suppliers can step in if the early termination of a Full-Requirements Service Agreement with a supplier should occur, as well as specific mechanisms for BGE to otherwise replace defaulted supplier contracts. All costs incurred by BGE to replace the supply contract are to be recovered from the defaulting supplier or from customers through rates. Finally, BGE's exposure to uncollectible expense or credit risk from customers for the commodity portion of the bill is covered by the administrative fee included in Provider of Last Resort rates.

Our regulated electric business may enter into electric futures, options, and swaps to hedge its price. We discuss this further in *Note 13*. At December 31, 2006 and 2005, our exposure to commodity price risk for our regulated electric business was not material.

Regulated Gas Business

Our regulated gas business may enter into gas futures, options, and swaps to hedge its price risk under our market-based rate incentive mechanism and our off-system gas sales program. We discuss this further in *Note 13*. At December 31, 2006 and 2005, our exposure to commodity price risk for our regulated gas business was not material.

Credit Risk

We are exposed to credit risk, primarily through our merchant energy business. Credit risk is the loss that may result from counterparties nonperformance. We evaluate the credit risk of our wholesale marketing, risk management, and trading operation and our retail competitive supply activities separately as discussed below.

Wholesale Credit Risk

We measure wholesale credit risk as the replacement cost for open energy commodity and derivative transactions (both mark-to-market and accrual) adjusted for amounts owed to or due from counterparties for settled transactions. The replacement cost of open positions represents unrealized gains, net of any unrealized losses, where we have a legally enforceable right of setoff. We monitor and manage the credit risk of our wholesale marketing, risk management, and trading operation through credit policies and procedures which include an established credit approval process, daily monitoring of counterparty credit limits, the use of credit mitigation measures such as margin, collateral, or prepayment arrangements, and the use of master netting agreements.

As of December 31, 2006 and 2005, the credit portfolio of our wholesale marketing, risk management, and trading operation had the following public credit ratings:

At December 31, Rating	2006	2005
Investment Grade ¹	61 %	53 %
Non-Investment Grade	3	7
Not Rated	36	40

¹ Includes counterparties with an investment grade rating by at least one of the major credit rating agencies. If split rating exists, the lower rating is used.

Our exposure to Not Rated counterparties was \$1.1 billion at December 31, 2006 compared to \$1.4 billion at December 31, 2005. This decrease was mostly due to a decrease in our credit portfolio related to natural gas and international coal customers that do not have public credit ratings. Although not rated, a majority of these counterparties are considered investment grade equivalent based on our internal credit ratings. We utilize internal credit ratings to evaluate the creditworthiness of our wholesale customers, including those companies that do not have public credit ratings. Based on internal credit ratings, approximately \$643.8 million or 59% of the exposure to unrated counterparties was rated investment grade equivalent at December 31, 2006 and approximately \$915.7 million or 68% was rated investment grade equivalent at December 31, 2005. The following table provides the breakdown of the credit quality of our wholesale credit portfolio based on our internal credit ratings.

At December 31,	2006	2005
Investment Grade Equivalent	82 %	80 %
Non-Investment Grade	18	20

A portion of our total wholesale credit risk is related to transactions that are recorded in our Consolidated Balance Sheets. These transactions primarily consist of open positions from our wholesale marketing, risk management, and trading operation that are accounted for using mark-to-market accounting, as well as amounts owed by wholesale counterparties for transactions that settled but have not yet been paid. The following table highlights the credit quality and exposures related to these activities:

Rating	Total Exposure Before Credit Collateral	Credit Collateral	Net Exposure (Dollars in millions)	Number of Counterparties Greater than 10% of Net Exposure	Net Exposure of Counterparties Greater than 10% of Net Exposure
Investment grade	\$ 1,268	\$ 130	\$ 1,138		\$
Split rating	34	5	29		

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Non-investment grade	81	44	37
Internally rated investment grade	511	71	440
Internally rated non-investment grade	229	55	174
Total	\$ 2,123	\$ 305	\$ 1,818

Due to the possibility of extreme volatility in the prices of energy commodities and derivatives, the market value of contractual positions with individual counterparties could exceed established credit limits or collateral provided by those counterparties. If such a counterparty were then to fail to perform its obligations under its contract (for example, fail to deliver the electricity our wholesale marketing, risk management, and trading operation had contracted for), we could incur a loss that could have a material impact on our financial results.

Additionally, if a counterparty were to default and we were to liquidate all contracts with that entity, our credit loss would include the loss in value of mark-to-market contracts, the amount owed for settled transactions, and additional payments, if any, that we would have to make to settle unrealized losses on accrual contracts.

Retail Credit Risk

We are exposed to retail credit risk through our competitive electricity and natural gas supply activities which serve commercial and industrial companies. Retail credit risk results when customers default on their contractual obligations. This risk represents the loss that may be incurred due to the nonpayment of a customer's accounts receivable balance, as well as the loss from the resale of energy previously committed to serve the customer.

Retail credit risk is managed through established credit policies, monitoring customer exposures, and the use of credit mitigation measures such as letters of credit or prepayment arrangements.

Our retail credit portfolio is well diversified with no significant company or industry concentrations. During 2006, we did not experience a material change in the credit quality of our retail credit portfolio compared to 2005. Retail credit quality is dependent on the economy and the ability of our customers to manage through unfavorable economic cycles and other market changes. If the business environment were to be negatively affected by changes in economic or other market conditions, our retail credit risk may be adversely impacted.

Foreign Currency Risk

Our merchant energy business is exposed to the impact of foreign exchange rate fluctuations. This foreign currency risk arises from our activities in countries where we transact in currencies other than the U.S. dollar. In 2006, our exposure to foreign currency risk was not material. However, we expect our foreign currency exposure to grow due to our Canadian operations, global power, coal, freight, and natural gas operations, and our UniStar venture. We manage our exposure to foreign currency exchange rate risk using a comprehensive foreign currency hedging program. While we cannot predict currency fluctuations, the impact of foreign currency exchange rate risk could be material.

Equity Price Risk

We are exposed to price fluctuations in equity markets primarily through our pension plan assets, our nuclear decommissioning trust funds, and trust assets securing certain executive benefits. We are required by the NRC to maintain externally funded trusts for the costs of decommissioning our nuclear power plants. We discuss our nuclear decommissioning trust funds in more detail in *Note 1*.

A hypothetical 10% decrease in equity prices would result in an approximate \$130 million reduction in the fair value of our financial investments that are classified as trading or available-for-sale securities. In 2006, our actual return on pension plan assets was \$141.1 million due to advances in the markets in which plan assets are invested. We describe our financial investments in more detail in *Note 4*, and our pension plans in *Note 7*.

Item 7A. Quantitative and Qualitative Disclosures about Market Risk

The information required by this item with respect to market risk is set forth in *Item 7* of Part II of this Form 10-K under the heading *Market Risk*.

63

Item 8. Financial Statements and Supplementary Data

Financial Statements

The management of Constellation Energy Group, Inc. and Baltimore Gas and Electric Company (the Companies) is responsible for the information and representations in the Companies' financial statements. The Companies prepare the financial statements in accordance with accounting principles generally accepted in the United States of America based upon available facts and circumstances and management's best estimates and judgments of known conditions.

PricewaterhouseCoopers LLP, an independent registered public accounting firm, has audited the financial statements and expressed their opinion on them. They performed their audit in accordance with the standards of the Public Company Accounting Oversight Board (United States).

The Audit Committee of the Board of Directors, which consists of three independent Directors, meets periodically with management, internal auditors, and PricewaterhouseCoopers LLP to review the activities of each in discharging their responsibilities. The internal audit staff and PricewaterhouseCoopers LLP have free access to the Audit Committee.

Management's Report on Internal Control Over Financial Reporting

The management of Constellation Energy Group, Inc. (Constellation Energy), under the direction of its principal executive officer and principal financial officer, is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Exchange Act Rule 13a-15(f).

Constellation Energy's system of internal control over financial reporting is designed to provide reasonable assurance to Constellation Energy's management and Board of Directors regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles in the United States of America.

The management of Constellation Energy conducted an evaluation of the effectiveness of Constellation Energy's internal control over financial reporting using the framework in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). As noted in the COSO framework, an internal control system, no matter how well conceived and operated, can provide only reasonable-not absolute-assurance to management and the Board of Directors regarding achievement of an entity's financial reporting objectives. Based upon the evaluation under this framework, management concluded that Constellation Energy's internal control over financial reporting was effective as of December 31, 2006.

PricewaterhouseCoopers LLP, an independent registered public accounting firm, has audited management's assessment of the effectiveness of Constellation Energy's internal control over financial reporting at December 31, 2006, as stated in their report set forth below.

As discussed in *Item 9A. Controls and Procedures*, the management of Baltimore Gas & Electric Company (BGE) has not assessed the effectiveness of BGE's internal control over financial reporting on a standalone basis because it is not yet required to do so by applicable federal securities laws and regulations.

Mayo A. Shattuck III
Chairman of the Board, President and Chief Executive Officer

E. Follin Smith
Executive Vice-President, Chief Financial Officer, and Chief Administrative Officer

To the Board of Directors and Shareholders of Constellation Energy Group, Inc.

We have completed integrated audits of Constellation Energy Group, Inc. and Subsidiaries consolidated financial statements and of its internal control over financial reporting as of December 31, 2006 in accordance with the standards of the Public Company Accounting Oversight Board (United States). Our opinions, based on our audits, are presented below.

Consolidated financial statements and financial statement schedule

In our opinion, the consolidated financial statements listed in the index appearing under Item 15(a) (1) present fairly, in all material respects, the financial position of Constellation Energy Group, Inc. and Subsidiaries (the Company) at December 31, 2006 and 2005, and the results of their operations and their cash flows for each of the three years in the period ended

December 31, 2006 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the index appearing under Item 15(a) (2) presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. These financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and financial statement schedule based on our audits. We conducted our audits of these statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit of financial statements includes examining, on a test basis, evidence supporting the

amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As discussed in *Note 1* to the consolidated financial statements, in 2006 the Company changed its method of accounting for defined benefit pension and other postretirement plans. As discussed in *Note 1* to the consolidated financial statements, in 2005 the Company changed its method of accounting for conditional asset retirement obligations and the accounting for stock based compensation.

We have also previously audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets and statements of capitalization of Constellation Energy Group, Inc. and Subsidiaries as of December 31, 2004, 2003, and 2002, and the related consolidated statements of income, cash flows, and common shareholders' equity and comprehensive income for the years ended December 31, 2003 and 2002 (none of which are presented herein); and we expressed unqualified opinions on those consolidated financial statements. In our opinion, the information set forth in the Summary of Operations and Summary of Financial Condition of Constellation Energy Group, Inc. and Subsidiaries included in the Selected Financial Data for each of the five years in the period ended December 31, 2006, is fairly stated, in all material respects, in relation to the consolidated financial statements from which it has been derived.

Internal control over financial reporting

Also, in our opinion, management's assessment, included in Management's Report on Internal Control Over Financial Reporting appearing under Item 8, that the Company maintained effective internal control over financial reporting as of December 31, 2006, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), is fairly stated, in all material respects, based on those criteria. Furthermore, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2006, based on criteria established in *Internal Control - Integrated Framework* issued by the COSO. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express opinions on management's assessment and on the effectiveness of the Company's internal control over financial reporting based on our audit. We conducted our audit of internal control over financial reporting in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. An audit of internal control over financial reporting includes obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we consider necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

PricewaterhouseCoopers LLP
Baltimore, Maryland
February 26, 2007

To Board of Directors and Shareholder of Baltimore Gas and Electric Company

In our opinion, the consolidated financial statements listed in the index appearing under Item 15(a) (1) present fairly, in all material respects, the financial position of Baltimore Gas and Electric Company and Subsidiaries (the Company) at December 31, 2006 and 2005, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2006 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the index appearing

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

under Item 15(a) (2) presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. These financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and financial statement schedule based on our audits. We conducted our audits of these statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the

65

financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

We have also previously audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Baltimore Gas and Electric Company and Subsidiaries as of December 31, 2004, 2003 and 2002, and the related consolidated statements of income, cash flows, and comprehensive income for the years ended December 31, 2003 and 2002 (none of which are presented herein); and we expressed unqualified opinions on those consolidated financial statements. In our opinion, the information set forth in the Summary of Operations and Summary of Financial Condition of Baltimore Gas and Electric Company and Subsidiaries included in the Selected Financial Data for each of the five years in the period ended December 31, 2006, is fairly stated, in all material respects, in relation to the consolidated financial statements from which it has been derived.

1 Significant Accounting Policies

Nature of Our Business

Constellation Energy Group, Inc. (Constellation Energy) is an energy company that conducts its business through various subsidiaries including a merchant energy business and Baltimore Gas and Electric Company (BGE). Our merchant energy business is a competitive provider of energy solutions for a variety of customers. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of ten counties in central Maryland. We describe our operating segments in *Note 3*.

This report is a combined report of Constellation Energy and BGE. References in this report to *we* and *our* are to Constellation Energy and its subsidiaries. References in this report to the *regulated business(es)* are to BGE.

Termination of Merger Agreement with FPL Group, Inc.

On October 24, 2006, Constellation Energy and FPL Group, Inc. (FPL Group) agreed to terminate the Agreement and Plan of Merger the parties had entered into on December 18, 2005. We discuss the terminated merger in more detail in *Note 15*.

Consolidation Policy

We use three different accounting methods to report our investments in our subsidiaries or other companies: consolidation, the equity method, and the cost method.

Consolidation

We use consolidation for two types of entities:

- ◆ subsidiaries (other than variable interest entities) in which we own a majority of the voting stock, and
- ◆ variable interest entities (VIEs) for which we are the primary beneficiary. Financial Accounting Standards Board (FASB) Interpretation No. (FIN) 46R, *Consolidation of Variable Interest Entities*, requires us to use consolidation when we are the primary beneficiary of a VIE, which means that we have a controlling financial interest in a VIE. We discuss our investments in VIEs in more detail in *Note 4*.

Consolidation means that we combine the accounts of these entities with our accounts. Therefore, our consolidated financial statements include our accounts, the accounts of our majority-owned subsidiaries that are not VIEs, and the accounts of VIEs for which we are the primary beneficiary. We have not consolidated any entities for which we do not have a controlling voting interest. We eliminate all intercompany balances and transactions when we consolidate these accounts.

The Equity Method

We usually use the equity method to report investments, corporate joint ventures, partnerships, and affiliated companies (including qualifying facilities and power projects) where we hold a 20% to 50% voting interest. Under the equity method, we report:

- ◆ our interest in the entity as an investment in our Consolidated Balance Sheets, and
- ◆ our percentage share of the earnings from the entity in our Consolidated Statements of Income.

The only time we do not use this method is if we can exercise control over the operations and policies of the company. If we have control, accounting rules require us to use consolidation.

The Cost Method

We usually use the cost method if we hold less than a 20% voting interest in an investment. Under the cost method, we report our investment at cost in our Consolidated Balance Sheets. The only time we do not use this method is when we can exercise significant influence over the operations and policies of the company. If we have significant influence, accounting rules require us to use the equity method.

Sale of Subsidiary Stock

We may sell portions of our ownership interests through public offerings of a subsidiary's stock. We record any gains or losses on public offerings in our Consolidated Statements of Income, as a component of non-operating income.

Regulation of Electric and Gas Business

The Maryland Public Service Commission (Maryland PSC) and the Federal Energy Regulatory Commission (FERC) provide the final determination of the rates we charge our customers for our regulated businesses. Generally, we use the same accounting policies and practices used by nonregulated companies for financial reporting under accounting principles generally accepted in the United States of America. However, sometimes the Maryland PSC or the FERC orders an accounting treatment different from that used by nonregulated companies to determine the rates we charge our customers.

When this happens, we must defer (include as an asset or liability in our, and BGE's, Consolidated Balance Sheets and exclude from our, and BGE's, Consolidated Statements of Income) certain regulated business expenses and income as regulatory assets and liabilities. We have recorded these regulatory assets and liabilities in our, and BGE's, Consolidated Balance Sheets in accordance with Statement of Financial Accounting Standards (SFAS) No. 71, *Accounting for the Effects of Certain Types of Regulation*.

We summarize and discuss our regulatory assets and liabilities further in *Note 6*.

Use of Accounting Estimates

Management makes estimates and assumptions when preparing financial statements under accounting principles generally

accepted in the United States of America. These estimates and assumptions affect various matters, including:

- ◆ our reported amounts of revenues and expenses in our Consolidated Statements of Income during the reporting periods,
- ◆ our reported amounts of assets and liabilities in our Consolidated Balance Sheets at the dates of the financial statements, and
- ◆ our disclosure of contingent assets and liabilities at the dates of the financial statements.

These estimates involve judgments with respect to numerous factors that are difficult to predict and are beyond management's control. As a result, actual amounts could materially differ from these estimates.

Reclassifications

We have reclassified certain prior-year amounts for comparative purposes. These reclassifications primarily relate to operations that have been classified as discontinued operations in the current year and did not affect consolidated net income for the years presented.

Revenues

Accrual Accounting

We record revenues from the sale of energy, energy-related products, and energy services under the accrual method of accounting in the period when we deliver energy commodities or products, render services, or settle contracts. We use accrual accounting for our merchant energy and other nonregulated business transactions, including the generation or purchase and sale of electricity, gas, and coal as part of our physical delivery activities and for power, gas, and coal sales contracts that are not subject to mark-to-market accounting. Sales contracts that are eligible for accrual accounting include non-derivative transactions and derivatives that qualify for and are designated as normal purchases and normal sales of commodities that will be physically delivered. We record accrual revenues, including settlements with independent system operators, on a gross basis because we are a principal to the transaction and otherwise meet the requirements of Emerging Issues Task Force (EITF) 03-11, *Reporting Gains and Losses on Derivative Instruments That Are Subject to FASB Statement No. 133, Accounting for Derivative Instruments and Hedging Activities, and Not Held for Trading Purposes*, and EITF 99-19, *Reporting Revenue Gross as a Principal versus Net as an Agent*.

We may make or receive cash payments at the time we assume a power sale agreement for which the contract price differs from current market prices. We recognize the cash payment at inception in our Consolidated Balance Sheets as an Unamortized energy contract asset or liability. We amortize these assets and liabilities into revenues based on the expected cash flows provided by the contracts.

During 2006 and 2005, we terminated or restructured in-the-money contracts in exchange for upfront cash payments and a reduction or cancellation of future performance obligations. The termination or restructuring of contracts allowed us to lower our exposure to performance risk under these contracts, and resulted in the realization of \$56.7 million of pre-tax earnings in 2006 and \$77.0 million of pre-tax earnings in 2005 that would have been recognized over the life of these contracts.

Mark-to-Market Accounting

We record revenues using the mark-to-market method of accounting for derivative contracts for which we are not permitted to use accrual accounting or hedge accounting. We discuss our use of hedge accounting in the *Derivatives and Hedging Activities* section later in this Note. These mark-to-market activities include derivative contracts for energy and other energy-related commodities. Under the mark-to-market method of accounting, we record the fair value of these derivatives as mark-to-market energy assets and liabilities at the time of contract execution. Our wholesale marketing, risk management, and trading operation records changes in mark-to-market energy assets and liabilities on a net basis in Nonregulated revenues in our Consolidated Statements of Income. Our retail competitive supply operation records changes in sale contracts accounted for as mark-to-market in Nonregulated revenues in our Consolidated Statements of Income.

Mark-to-market energy assets and liabilities consist of derivative contracts. While some of these contracts represent commodities or instruments for which prices are available from external sources, other commodities and certain contracts are not actively traded and are valued using modeling techniques to determine expected future market prices, contract quantities, or both. The market prices and quantities used to determine fair value reflect management's best estimate considering various factors, including closing exchange and over-the-counter quotations, time value, and volatility factors. However, future market prices and actual quantities will vary from those used in recording mark-to-market energy

assets and liabilities, and it is possible that such variations could be material.

Mark-to-market revenues include:

- ◆ gains or losses on new transactions at origination to the extent permitted by applicable accounting rules,
- ◆ unrealized gains and losses from changes in the fair value of open contracts,
- ◆ net gains and losses from realized transactions, and
- ◆ changes in valuation adjustments.

Origination gains, which are included in mark-to-market revenues, arise primarily from contracts that our wholesale marketing, risk management, and trading operation structures to meet the risk management needs of our customers. Transactions that result in origination gains may be unique and provide the potential for individually significant gains from a single transaction.

Origination gains represent the initial fair value recognized on these structured transactions. The recognition of origination gains is dependent on the existence of observable market data that validates the initial fair value of the contract. Origination gains were:

- ◆ \$13.5 million pre-tax in 2006,
- ◆ \$61.6 million pre-tax in 2005, and
- ◆ \$19.7 million pre-tax in 2004.

Origination gains arose primarily from:

- ◆ 3 transactions completed in 2006, of which no transaction contributed in excess of \$10 million pre-tax,

- ◆ 6 transactions completed in 2005, one of which contributed approximately \$35 million pre-tax, and
- ◆ 7 transactions completed in 2004, of which no transaction contributed in excess of \$10 million pre-tax.

Valuation Adjustments

We record valuation adjustments to reflect uncertainties associated with certain estimates inherent in the determination of the fair value of mark-to-market energy assets and liabilities. To the extent possible, we utilize market-based data together with quantitative methods for both measuring the uncertainties for which we record valuation adjustments and determining the level of such adjustments and changes in those levels.

We describe below the main types of valuation adjustments we record and the process for establishing each. Generally, increases in valuation adjustments reduce our earnings, and decreases in valuation adjustments increase our earnings. However, all or a portion of the effect on earnings of changes in valuation adjustments may be offset by changes in the value of the underlying positions.

- ◆ **Close-out adjustment** represents the estimated cost to close out or sell to a third-party open mark-to-market positions. This valuation adjustment has the effect of valuing long positions (the purchase of a commodity) at the bid price and short positions (the sale of a commodity) at the offer price. We compute this adjustment based on our estimate of the bid/offer spread for each commodity and option price and the absolute quantity of our net open positions for each year. The level of total close-out valuation adjustments increases as we have larger unhedged positions, bid-offer spreads increase, or market information is not available, and it decreases as we reduce our unhedged positions, bid-offer spreads decrease, or market information becomes available. To the extent that we are not able to obtain observable market information for similar contracts, the close-out adjustment is equivalent to the initial contract margin, thereby recording no gain or loss at inception. In the absence of observable market information, there is a presumption that the transaction price is equal to the market value of the contract, and therefore we do not recognize a gain or loss at inception. We recognize such gains or losses in earnings as we realize cash flows under the contract or when observable market data becomes available.

- ◆ **Credit-spread adjustment** for risk management purposes we compute the value of our mark-to-market energy assets and liabilities using a risk-free discount rate. In order to compute fair value for financial reporting purposes, we adjust the value of our mark-to-market energy assets to reflect the credit-worthiness of each customer (counterparty) based upon either published credit ratings, or equivalent internal credit ratings and associated default probability percentages. We compute this adjustment by applying the appropriate default probability percentage to our outstanding credit exposure, net of collateral, for each counterparty. The level of this adjustment increases as our credit exposure to counterparties increases, the maturity terms of our transactions increase, or the credit ratings of our counterparties deteriorate, and it decreases when our credit exposure to counterparties decreases, the maturity terms of our transactions decrease, or the credit ratings of our counterparties improve.

Financial Statement Presentation

Certain transactions entered into under master agreements and other arrangements provide our wholesale competitive supply operation with a right of setoff in the event of bankruptcy or default by the counterparty. We report such transactions net in our Consolidated Balance Sheets in accordance with FASB Interpretation No. 39, *Offsetting of Amounts Related to Certain Contracts*.

Equity in Earnings

We include equity in earnings from our investments in qualifying facilities and power projects in Nonregulated revenues in our Consolidated Statements of Income in the period they are earned.

Fuel and Purchased Energy Expenses

We incur costs for:

- ◆ the fuel we use to generate electricity,
- ◆ purchases of electricity from others, and
- ◆ natural gas and coal that we resell.

These costs are included in Fuel and purchased energy expenses in our Consolidated Statements of Income. We discuss certain of these separately below. We also include certain non-fuel direct costs, such as ancillary services, transmission costs, and brokerage fees in Fuel and purchased energy expenses in our Consolidated Statements of Income.

Our retail competitive supply operation records changes in purchase contracts accounted for as mark-to-market in Fuel and purchased energy expenses in our Consolidated Statements of Income.

Fuel Used to Generate Electricity and Purchases of Electricity

Nonregulated Businesses

We assemble a variety of power supply resources, including baseload, intermediate, and peaking plants that we own, as well as a variety of power supply contracts that may have similar characteristics, in order to enable us to meet our customers' energy requirements, which vary on an hourly basis. The amount of power purchased depends on a number of factors, including the capacity and availability of our power plants, the level of customer demand, and the relative economics of generating power versus purchasing power from the spot market.

We also have acquired contracts and certain power purchase agreements that qualify as operating leases. Under these operating leases, we record fuel and purchased energy expense as we make fixed capacity payments, as well as variable payments based on the actual output of the plants.

We may make or receive cash payments at the time we acquire a contract or assume a power purchase agreement when the contract price differs from market prices at closing. We recognize the cash payment or receipt at inception in our Consolidated Balance Sheets as an Unamortized energy contract asset (payment) or liability (receipt). We amortize these assets and liabilities into fuel and purchased energy expenses based on the expected cash flows provided by the contracts.

Regulated Electric

BGE is obligated to provide market-based standard offer service to residential and small commercial customers for the indefinite future, and for large commercial and industrial customers for varying periods beyond June 30, 2004, depending on customer load. The Provider of Last Resort (POLR) rates charged during these time periods will recover BGE's wholesale power supply costs and include an administrative fee. The administrative fee includes a shareholder return component and an incremental cost component. Pursuant to Senate Bill 1, the energy legislation enacted in Maryland in June 2006, collection of the shareholder return component of the administrative fee for residential POLR service will be suspended beginning January 1, 2007 for a 10-year period.

In accordance with the POLR settlement agreement approved by the Maryland PSC, BGE defers the difference between certain of its actual costs related to the electric commodity and what it collects from customers under the commodity charge in a given period. BGE either bills or refunds its customers the difference in the future. In addition, Senate Bill 1 imposed a 15% rate cap for BGE residential electric customers from July 1, 2006 until May 31, 2007. We discuss this in more detail in *Note 6*.

BGE's obligation to provide market-based standard offer service to its largest commercial and industrial customers expired May 31, 2005. BGE continues to provide an hourly priced market-based standard offer service to those customers.

Regulated Gas

BGE charges its gas customers for the natural gas they purchase from BGE using gas cost adjustment clauses set by the Maryland PSC. Under these clauses, BGE defers the difference between certain of its actual costs related to the gas commodity and what it collects from customers under the commodity charge in a given period. BGE either bills or refunds its customers the difference in the future. The Maryland PSC approved a modification of the gas cost adjustment clauses to provide a market-based rates incentive mechanism. Under the market-based rates incentive mechanism, BGE's actual cost of gas is compared to a market index (a measure of the market price of gas in a given period). The difference between BGE's actual cost and the market index is shared equally between shareholders and customers. Effective November 2001, the Maryland PSC approved a settlement that modifies certain provisions of the market-based rates incentive mechanism. These provisions require that BGE secure fixed-price contracts for at least 10%, but not more than 20%, of forecasted system supply requirements for the November through March period. These fixed-price contracts are not subject to sharing under the market-based rates incentive mechanism.

Derivatives and Hedging Activities

We are exposed to market risk, including changes in interest rates and the impact of market fluctuations in the price and transportation costs of electricity, natural gas, and other commodities as discussed further in *Note 13*. In order to manage these risks, we use both derivative and non-derivative contracts that may provide for settlement in cash or by delivery of a commodity, including:

- ◆ forward contracts, which commit us to purchase or sell energy commodities in the future,
- ◆ futures contracts, which are exchange-traded standardized commitments to purchase or sell a commodity or financial instrument, or to make a cash settlement, at a specific price and future date,
- ◆ swap agreements, which require payments to or from counterparties based upon the differential between two prices for a predetermined contractual (notional) quantity, and
- ◆ option contracts, which convey the right to buy or sell a commodity, financial instrument, or index at a predetermined price.

SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended, requires that we recognize at fair value all derivatives not qualifying for accrual accounting under the normal purchase and normal sale exception. We record derivatives that are designated as hedges in Risk management assets or liabilities and derivatives not designated as hedges in Mark-to-market energy assets or liabilities in our Consolidated Balance Sheets.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We record changes in the value of derivatives that are not designated as cash-flow hedges in earnings during the period of change. We record changes in the fair value of derivatives designated as cash-flow hedges that are effective in offsetting the variability in cash flows of forecasted transactions in other comprehensive income until the forecasted transactions occur. At the time the forecasted transactions occur, we reclassify the amounts recorded in other comprehensive income into earnings. We record the ineffective portion of changes in the fair value of derivatives used as cash-flow hedges immediately in earnings.

81

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We summarize our cash-flow hedging activities under SFAS No. 133 and the income statement classification of amounts reclassified from Accumulated other comprehensive income (loss) as follows:

Risk	Derivative	Income Statement Classification
Interest rate risk associated with new debt issuances	Interest rate swaps	Interest expense
Interest rate risk associated with variable-rate debt	Interest rate swaps	Interest expense
Nonregulated energy sales	Futures and forward contracts	Nonregulated revenues
Nonregulated fuel and energy purchases	Futures and forward contracts	Fuel and purchased energy expenses
Nonregulated gas purchases for resale	Futures and forward contracts and price and basis swaps	Fuel and purchased energy expenses
Regulated gas purchases for resale	Price and basis swaps	Fuel and purchased energy expenses
Regulated electricity purchases for resale	Price and basis swaps	Fuel and purchased energy expenses

We designate certain derivatives as fair value hedges. We record changes in the fair value of these derivatives and changes in the fair value of the hedged assets or liabilities in earnings as the changes occur. We summarize our fair value hedging activities and the income statement classification of changes in the fair value of these hedges and the related hedged items as follows:

Risk	Derivative	Income Statement Classification
Optimize mix of fixed and floating-rate debt	Interest rate swaps	Interest expense
Value of natural gas in storage	Forward contracts and price and basis swaps	Nonregulated revenues and Fuel and purchased energy expenses

We record changes in the fair value of interest rate swaps and the debt being hedged in Risk management assets and liabilities and Long-term debt and changes in the fair value of the gas being hedged and related derivatives in Fuel stocks and Risk management assets and liabilities in our Consolidated Balance Sheets. In addition, we record the difference between interest on hedged fixed-rate debt and floating-rate swaps in Interest expense in the periods that the swaps settle.

Unamortized Energy Assets and Liabilities

Unamortized energy contract assets and liabilities represent the remaining unamortized balance of non-derivative energy contracts that we acquired or derivatives designated as normal purchases and normal sales that we had previously recorded as Mark-to-market energy assets or liabilities or Risk management assets and liabilities. The initial amount recorded represents the fair value of the contract at the time of acquisition or designation, and the balance is amortized over the life of the contract in relation to the present value of the underlying cash flows. The amortization of these values is discussed in the *Revenues* and *Fuel and Purchased Energy Expenses* sections of this Note.

Credit Risk

Credit risk is the loss that may result from counterparty non-performance. We are exposed to credit risk, primarily through our merchant energy business. We use credit policies to manage our credit risk, including utilizing an established credit approval process, daily monitoring of counterparty limits, employing credit mitigation measures such as margin, collateral or prepayment arrangements, and using master netting agreements. We measure credit risk as the replacement cost for open energy commodity and derivative positions (both mark-to-market and accrual) plus amounts owed from counterparties for settled transactions. The replacement cost of open positions represents unrealized gains, less any unrealized losses where we have a legally enforceable right of setoff.

Electric and gas utilities, municipalities, cooperatives, generation owners, and energy marketers comprise the majority of counterparties underlying our assets from our wholesale marketing and risk management activities. We held cash collateral from these counterparties totaling \$252.6 million as of December 31, 2006 and \$388.4 million as of December 31, 2005. These amounts are included in Customer deposits and collateral in our Consolidated Balance Sheets.

Taxes

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We summarize our income taxes in *Note 10*. BGE and our other subsidiaries record their allocated share of our consolidated federal income tax liability using the percentage complementary method specified in U.S. income tax regulations. As you read this section, it may be helpful to refer to *Note 10*.

Income Tax Expense

We have two categories of income tax expense – current and deferred. We describe each of these below:

- ◆ current income tax expense consists solely of regular tax less applicable tax credits, and
- ◆ deferred income tax expense is equal to the changes in the net deferred income tax liability, excluding amounts charged or credited to accumulated other comprehensive income. Our deferred income tax expense is increased or reduced for changes to the Income taxes recoverable

82

through future rates (net) regulatory asset (described below) during the year.

Tax Credits

We have deferred the investment tax credits associated with our regulated business and assets previously held by our regulated business in our Consolidated Balance Sheets. The investment tax credits are amortized evenly to income over the life of each property. We reduce current income tax expense in our Consolidated Statements of Income for the investment tax credits and other tax credits associated with our nonregulated businesses.

We have certain investments in facilities that manufacture solid synthetic fuel produced from coal as defined under the Internal Revenue Code for which we claim tax credits on our Federal income tax return. We recognize the tax benefit of these credits in our Consolidated Statements of Income when we believe it is highly probable that the credits will be sustained.

Deferred Income Tax Assets and Liabilities

We must report some of our revenues and expenses differently for our financial statements than for income tax return purposes. The tax effects of the temporary differences in these items are reported as deferred income tax assets or liabilities in our Consolidated Balance Sheets. We measure the deferred income tax assets and liabilities using income tax rates that are currently in effect.

A portion of our total deferred income tax liability relates to our regulated business, but has not been reflected in the rates we charge our customers. We refer to this portion of the liability as Income taxes recoverable through future rates (net). We have recorded that portion of the net liability as a regulatory asset in our Consolidated Balance Sheets. We discuss this further in *Note 6*.

State and Local Taxes

State and local income taxes are included in Income taxes in our Consolidated Statements of Income.

BGE also pays Maryland public service company franchise tax on distribution, and delivery of electricity and natural gas. We include the franchise tax in Taxes other than income taxes in our Consolidated Statements of Income.

Earnings Per Share

Basic earnings per common share (EPS) is computed by dividing earnings applicable to common stock by the weighted-average number of common shares outstanding for the year. Diluted EPS reflects the potential dilution of common stock equivalent shares that could occur if securities or other contracts to issue common stock were exercised or converted into common stock.

Our dilutive common stock equivalent shares consist of stock options and other stock-based compensation awards. The following table presents stock options that were not dilutive and were excluded from the computation of diluted EPS in each period, as well as the dilutive common stock equivalent shares as follows:

<i>Year Ended December 31,</i>	2006	2005	2004
		<i>(In millions)</i>	
Non-dilutive stock options		0.1	
Dilutive common stock equivalent shares	2.0	2.2	1.0

Stock-Based Compensation

Under our long-term incentive plans, we have granted stock options, performance-based units, performance and service-based restricted stock, and equity to officers, key employees, and members of the Board of Directors. We discuss these awards in more detail in *Note 14*.

We elected to early adopt SFAS No. 123 Revised (SFAS No. 123R), *Share-Based Payment*, on October 1, 2005, which was prior to the required effective date of January 1, 2006. SFAS No. 123R requires companies to recognize compensation expense for all equity-based compensation awards issued to employees that are expected to vest. Equity-based compensation awards include stock options, restricted stock, and any other share-based payments. We recognized a small, favorable cumulative effect of change in accounting principle of \$0.2 million after-tax due to the requirement to reduce compensation expense for estimated forfeitures relating to outstanding unvested service-based restricted stock awards and performance-based unit awards at October 1, 2005.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Under SFAS No. 123R, we recognize compensation cost ratably or in tranches (depending if the award has cliff or graded vesting) over the period during which an employee is required to provide service in exchange for the award, which is typically a one to five-year period. We use a forfeiture assumption to estimate the number of awards that are expected to vest during the service period, and ultimately true-up the estimated expense to the actual expense associated with vested awards. We estimate the fair value of stock option awards on the date of grant using the Black-Scholes option-pricing model and we remeasure the fair value of liability awards each reporting period. The following table presents the pro-forma effect on net income and earnings per share for all outstanding stock options and stock awards in each period that the fair value provisions of SFAS No. 123R were not in effect. We do not capitalize any portion of our stock-based compensation.

83

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

<i>Year Ended December 31,</i>	2005	<i>(In millions, except per share amounts)</i>	2004
Net income, as reported	\$ 623.1		\$ 539.7
Add: Actual stock-based compensation expense determined under intrinsic value method and included in reported net income, net of related tax effects	17.8	*	13.2
Deduct: Pro-forma stock-based compensation expense determined under fair value based method for all awards, net of related tax effects	(24.5))*	(21.3)
Pro-forma net income	\$ 616.4		\$ 531.6
Earnings per share:			
Basic as reported	\$ 3.51		\$ 3.14
Basic pro-forma	\$ 3.47		\$ 3.09
Diluted as reported	\$ 3.47		\$ 3.12
Diluted pro-forma	\$ 3.43		\$ 3.07

* Represents expense for the nine months ended September 30, 2005, which was prior to adoption of SFAS No. 123R

Cash and Cash Equivalents

All highly liquid investments with original maturities of three months or less are considered cash equivalents.

Accounts Receivable and Allowance for Uncollectibles

Accounts receivable, which includes cash collateral posted in our margin account with a third-party broker, are stated at the historical carrying amount net of write-offs and allowance for uncollectibles. We establish an allowance for uncollectibles based on our expected exposure to the credit risk of customers based on a variety of factors.

Materials, Supplies, and Fuel Stocks

We record our fuel stocks, emissions credits, coal held for resale, and materials and supplies at the lower of cost or market. We determine cost using the average cost method for all of our inventory other than our coal held for resale for which we use the specific identification method.

Financial Investments

In *Note 4*, we summarize the financial investments that are in our Consolidated Balance Sheets.

SFAS No. 115, *Accounting for Certain Investments in Debt and Equity Securities*, applies particular requirements to some of our investments in debt and equity securities. We report those investments at fair value, and we use either specific identification or average cost to determine their cost for computing realized gains or losses.

Available-for-Sale Securities

We classify our investments in the nuclear decommissioning trust funds as available-for-sale securities. We describe the nuclear decommissioning trusts and the related asset retirement obligations later in this Note. In addition, we have investments in marketable equity securities and trust assets securing certain executive benefits that are classified as available-for-sale securities.

We include any unrealized gains or losses on our available-for-sale securities in Accumulated other comprehensive income in our Consolidated Statements of Common Shareholders Equity and Comprehensive Income and Consolidated Statements of Capitalization.

Evaluation of Assets for Impairment and Other Than Temporary Decline in Value

Long-Lived Assets

We are required to evaluate certain assets that have long lives (for example, generating property and equipment and real estate) to determine if they are impaired when certain conditions exist. SFAS No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, provides the accounting requirements for impairments of long-lived assets and proved gas properties. We are required to test our long-lived assets and proved

gas properties for recoverability whenever events or changes in circumstances indicate that their carrying amount may not be recoverable.

We determine if long-lived assets and proved gas properties are impaired by comparing their undiscounted expected future cash flows to their carrying amount in our accounting records. We would record an impairment loss if the undiscounted expected future cash flows were less than the carrying amount of the asset. Cash flows for long-lived assets, or a group of long-lived assets, are determined at the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets and liabilities. Proven gas properties' cash flows are determined at the field level. Undiscounted expected future cash flows include risk-adjusted probable and possible reserves. We are also required to evaluate our equity-method and cost-method investments (for example, in partnerships that own power projects) for impairment. Accounting Principles Board (APB) No. 18, *The Equity Method of Accounting for Investments in Common Stock* (APB No. 18), provides the accounting requirements for these investments. The standard for determining whether an impairment must be recorded under APB No. 18 is whether the investment has experienced a loss in value that is considered an other than a temporary decline in value.

We are also required to evaluate unproved gas producing properties at least annually to determine if it is impaired under SFAS No. 19, *Financial Accounting and Reporting by Oil and Gas Producing Properties*. Impairment for unproved property occurs if there are no firm plans to continue drilling, lease expiration is at risk, or historical experience necessitates a valuation allowance.

We use our best estimates in making these evaluations and consider various factors, including forward price curves for energy, fuel costs, legislative initiatives, and operating costs. However, actual future market prices and project costs could vary from those used in our impairment evaluations, and the impact of such variations could be material.

Debt and Equity Securities

Our investments in debt and equity securities, which primarily consist of our nuclear decommissioning trust fund investments, are subject to impairment evaluations under FASB Staff Position (FSP) FAS 115-1, *The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments*. FSP FAS 115-1 requires us to determine whether a decline in fair value of an investment below the amortized cost basis is other

than temporary. If we determine that the decline in fair value is judged to be other than temporary, the cost basis of the investment must be written down to fair value as a new cost basis.

Intangible Assets

Goodwill is the excess of the purchase price of an acquired business over the fair value of the net assets acquired. We account for goodwill and other intangibles under the provisions of SFAS No. 142, *Goodwill and Other Intangible Assets*. We do not amortize goodwill. SFAS No. 142 requires us to evaluate goodwill for impairment at least annually or more frequently if events and circumstances indicate the business might be impaired. Goodwill is impaired if the carrying value of the business exceeds fair value. Annually, we estimate the fair value of the businesses we have acquired using techniques similar to those used to estimate future cash flows for long-lived assets as previously discussed. If the estimated fair value of the business is less than its carrying value, an impairment loss is required to be recognized to the extent that the carrying value of goodwill is greater than its fair value. SFAS No. 142 also requires the amortization of intangible assets with finite lives. We discuss the changes in our intangible assets in more detail in *Note 5*.

Property, Plant and Equipment, Depreciation, Depletion, Amortization, and Accretion of Asset Retirement Obligations

We report our property, plant and equipment at its original cost, unless impaired under the provisions of SFAS No. 144.

Our original costs include:

- ◆ material and labor,
- ◆ contractor costs, and
- ◆ construction overhead costs, financing costs, and costs for asset retirement obligations (where applicable).

We own an undivided interest in the Keystone and Conemaugh electric generating plants in Western Pennsylvania, as well as in the transmission line that transports the plants' output to the joint owners' service territories. Our ownership interests in these plants are 20.99% in Keystone and 10.56% in Conemaugh. These ownership interests represented a net investment of \$183.1 million at December 31, 2006 and \$171.8 million at December 31, 2005. Each owner is responsible for financing its proportionate share of the plants' working funds. Working funds are used for operating expenses and capital expenditures. Operating expenses related to these plants are included in *Operating expenses* in our Consolidated Statements of Income. Capital costs related to these plants are included in *Nonregulated property, plant and equipment* in our Consolidated Balance Sheets.

The *Nonregulated property, plant and equipment* in our Consolidated Balance Sheets includes nonregulated generation construction work in progress of \$229.5 million at December 31, 2006 and \$228.8 million at December 31, 2005.

When we retire or dispose of property, plant and equipment, we remove the asset's cost from our Consolidated Balance Sheets. We charge this cost to accumulated depreciation for assets that were depreciated under the group, straight-line method. This includes regulated property, plant and equipment and nonregulated generating assets transferred from BGE to our merchant energy business. For all other assets, we remove the accumulated depreciation and amortization amounts from our Consolidated Balance Sheets and record any gain or loss in our Consolidated Statements of Income.

The costs of maintenance and certain replacements are charged to *Operating expenses* in our Consolidated Statements of Income as incurred.

Our oil and gas exploitation and production activities consist of working interests in gas producing fields. We account for these activities under the successful efforts method of accounting. Acquisition, development, and exploitation costs are capitalized as permitted by SFAS No. 19. Costs of drilling exploratory wells are initially capitalized and later charged to expense if reserves are not discovered or deemed not to be commercially viable. Other exploratory costs are charged to expense when incurred.

Capitalized exploratory well costs were \$24.7 million at December 31, 2006 and \$11.4 million at December 31, 2005, and do not include amounts that were capitalized and subsequently expensed within the same period. During 2006, there were \$23.9 million of well costs capitalized at December 31, 2005 that were reclassified to well, facilities, and equipment based on the determination of proved reserves. During 2005, there were \$1.4 million of well costs capitalized at December 31, 2004 that were reclassified to well, facilities, and equipment based on the determination of proved reserves.

No exploratory well costs have been capitalized for a period greater than one year since the completion of drilling.

Depreciation and Depletion Expense

We compute depreciation for our generating, electric transmission and distribution, and gas distribution facilities. We compute depletion for our exploitation and production activities. Depreciation and depletion are determined using the following methods:

- ◆ the group straight-line method, approved by the Maryland PSC, applied to the average investment, adjusted for anticipated costs of removal less salvage, in classes of depreciable property based on an average rate of approximately 3.5% per year for our regulated business,
- ◆ the group straight-line method using rates averaging approximately 2.5% per year for the fossil generating assets transferred from BGE to our merchant energy business and our nuclear generating assets,
- ◆ the modified units of production method (greater of straight-line method or units of production method) for fossil generating assets constructed after deregulation that were not previously owned by BGE, or
- ◆ the units-of-production method over the remaining life of the estimated proved reserves at the field level for acquisition costs and over the remaining life of proved developed reserves at the field level for development costs. The estimates for gas reserves are based on internal calculations.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Other assets are depreciated primarily using the straight-line method and the following estimated useful lives:

Asset	Estimated Useful Lives
Building and improvements	5 50 years
Office equipment and furniture	3 20 years
Transportation equipment	5 15 years
Computer software	3 10 years

Amortization Expense

Amortization is an accounting process of reducing an amount in our Consolidated Balance Sheets over a period of time that approximates the useful life of the related item. When we reduce amounts in our Consolidated Balance Sheets, we increase amortization expense in our Consolidated Statements of Income.

Accretion Expense

SFAS No. 143, *Accounting for Asset Retirement Obligations*, provides the accounting requirements for recognizing an estimated liability for legal obligations associated with the retirement of tangible long-lived assets. In the fourth quarter of 2005, we adopted FIN 47, *Accounting for Conditional Asset Retirement Obligations - an Interpretation of FASB Statement No. 143*. FIN 47 clarifies that asset retirement obligations that are conditional upon a future event are subject to the provisions of SFAS No. 143. Our conditional asset retirement obligations relate primarily to asbestos removal at certain of our generating facilities. In 2005, we recorded an asset retirement obligation of \$13.9 million for these facilities and recorded a \$7.4 million after-tax charge to earnings as a cumulative effect of change in accounting principle.

At December 31, 2006, \$950.4 million of our total asset retirement obligation of \$974.8 million was associated with the decommissioning of our nuclear power plants Calvert Cliffs Nuclear Power Plant (Calvert Cliffs), Nine Mile Point Nuclear Station (Nine Mile Point) and R. E. Ginna Nuclear Power Plant (Ginna). The remainder of our asset retirement obligations is associated with our other generating facilities and certain other long-lived assets. From time to time, we will perform studies to update our asset retirement obligations. We record a liability when we are able to reasonably estimate the fair value of any future legal obligations associated with retirement that have been incurred and capitalize a corresponding amount as part of the book value of the related long-lived assets.

The increase in the capitalized cost is included in determining depreciation expense over the estimated useful lives of these assets. Since the fair value of the asset retirement obligations is determined using a present value approach, accretion of the liability due to the passage of time is recognized each period to Accretion of asset retirement obligations in our Consolidated Statements of Income until the settlement of the liability. We record a gain or loss when the liability is settled after retirement for any difference between the accrued liability and actual costs. The change in our Asset retirement obligations liability during 2006 was as follows:

	<i>(In millions)</i>	
Liability at January 1, 2006	\$	908.0
Liabilities incurred		3.4
Liabilities settled		(0.3)
Accretion expense		67.6
Revisions to cash flows		(2.4)
Other		(1.5)
Liability at December 31, 2006	\$	974.8

Liabilities incurred in the table above primarily reflect new asset retirement obligations recorded at our fossil generating facilities in Maryland. Other represents the asset retirement obligation associated with our gas-fired plants, which were sold in December 2006. At the time of the sale, the asset retirement obligation was transferred to the buyer of the gas-fired plants. We discuss the sale of the gas-fired plants in more detail in *Note 2*.

Nuclear Fuel

We amortize the cost of nuclear fuel, including the quarterly fees we pay to the Department of Energy for the future disposal of spent nuclear fuel, based on the energy produced over the life of the fuel. These fees are based on the kilowatt-hours of electricity sold. We report the amortization expense for nuclear fuel in Fuel and purchased energy expenses in our Consolidated Statements of Income.

Nuclear Decommissioning

Effective January 1, 2003, we began to record decommissioning expense for Calvert Cliffs in accordance with SFAS No. 143. The Asset retirement obligations liability associated with the decommissioning of Calvert Cliffs was \$332.4 million at December 31, 2006 and \$308.2 million at December 31, 2005. Our contributions to the nuclear decommissioning trust funds for Calvert Cliffs were \$8.8 million for 2006, \$17.6 million for 2005, and \$22.0 million for 2004. Under the Maryland PSC's order deregulating electric generation, BGE's customers must pay a total of \$520 million in 1993 dollars, adjusted for inflation, to decommission Calvert Cliffs. BGE is collecting this amount on behalf of and passing it to Calvert Cliffs. Calvert Cliffs is responsible for any difference between this amount and the actual costs to decommission the plant.

In 2006, BGE received approval from the Maryland PSC to continue annual customer collections of \$18.7 million per year through December 31, 2016. BGE will be required to submit a filing to determine the level of customer contributions after December 31, 2016.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We began to record decommissioning expense for Nine Mile Point in accordance with SFAS No. 143 on January 1, 2003. The Asset retirement obligations liability associated with the decommissioning was \$408.1 million at December 31, 2006 and \$378.7 million at December 31, 2005. We determined that the decommissioning trust funds established for Nine Mile Point are adequately funded to cover the future costs to decommission the plant and as such, no contributions were made to the trust funds during the years ended December 31, 2006, 2005, and 2004.

Upon the closing of the Ginna acquisition in 2004, the seller transferred \$200.8 million in decommissioning funds. In return, we assumed all liability for the costs to decommission the unit. We believe that this transfer will be sufficient to cover the future costs to decommission the plant and as such, no contributions were made to the trust funds during the years ended December 31, 2006, 2005, and 2004. Effective June 2004, we began to record decommissioning expense for Ginna in accordance with SFAS No. 143. The Asset retirement obligations liability associated with the decommissioning was \$209.9 million at December 31, 2006 and \$196.6 million at December 31, 2005.

In accordance with Nuclear Regulatory Commission (NRC) regulations, we maintain external decommissioning trusts to fund the costs expected to be incurred to decommission Calvert Cliffs, Nine Mile Point, and Ginna. The NRC requires owners to provide financial assurance that they will accumulate sufficient funds to pay for the cost of nuclear decommissioning. The assets in the trusts are reported in Nuclear decommissioning trust funds in our Consolidated Balance Sheets. These amounts are legally restricted for funding the costs of decommissioning. We classify the investments in the nuclear decommissioning trust funds as available-for-sale securities, and we report these investments at fair value in our Consolidated Balance Sheets as previously discussed in this Note. Investments by nuclear decommissioning trust funds are guided by the prudent man investment principle. The funds are prohibited from investing directly in Constellation Energy or its affiliates and any other entity owning a nuclear power plant.

As the owner of Calvert Cliffs we, along with other domestic utilities, were required by the Energy Policy Act of 1992 to make contributions to a fund for decommissioning and decontaminating the Department of Energy's uranium enrichment facilities. The contributions were paid by BGE over a 15 year period ending in 2006. BGE amortizes the deferred costs of decommissioning and decontaminating the Department of Energy's uranium enrichment facilities. The previous owners retained the obligation for Nine Mile Point and Ginna.

Capitalized Interest and Allowance for Funds Used During Construction

Capitalized Interest

Our nonregulated businesses capitalize interest costs under SFAS No. 34, *Capitalizing Interest Costs*, for costs incurred to finance our power plant construction projects, real estate developed for internal use, and other capital projects.

Allowance for Funds Used During Construction (AFC)

BGE finances its construction projects with borrowed funds and equity funds. BGE is allowed by the Maryland PSC to record the costs of these funds as part of the cost of construction projects in its Consolidated Balance Sheets. BGE does this through the AFC, which it calculates using rates authorized by the Maryland PSC. BGE bills its customers for the AFC plus a return after the utility property is placed in service.

The AFC rates are 9.4% for electric plant, 8.5% for gas plant, and 9.2% for common plant. BGE compounds AFC annually.

Long-Term Debt

We defer all costs related to the issuance of long-term debt. These costs include underwriters' commissions, discounts or premiums, other costs such as legal, accounting, and regulatory fees, and printing costs. We amortize these costs into interest expense over the life of the debt.

When BGE incurs gains or losses on debt that it retires prior to maturity, it amortizes those gains or losses over the remaining original life of the debt.

Accounting Standards Issued

SFAS No. 157

In September 2006, the FASB issued SFAS No. 157, *Fair Value Measurements*. SFAS No. 157 defines fair value, establishes a framework for measuring fair value, and expands disclosures for fair value measurements. SFAS No. 157 is effective for all fair value measurements beginning January 1, 2008. We are currently assessing the potential impact of SFAS No. 157. Based upon our initial assessment, we believe that SFAS No. 157 will affect the accounting for derivatives, which is one of our critical accounting policies, in at least two ways:

- ◆ We record mark-to-market energy assets net of a close-out valuation adjustment, a portion of which represents the initial contract margin when we are unable to obtain observable market price information for similar contracts. As a result, we do not recognize gains or losses in earnings at the inception of such contracts; instead, we recognize gains or losses in earnings as we realize cash flows under the contract or when observable market data becomes available. In certain instances, SFAS No. 157 will require us to record mark-to-market energy assets at fair value without such a valuation adjustment, resulting in the potential for recognition of gains or losses in earnings at the inception of new mark-to-market derivative contracts executed after the effective date.

- ◆ We presently determine fair value for mark-to-market energy liabilities and risk management liabilities for which prices are not available from external sources by discounting the expected cash flows from the contracts using a risk-free discount rate. We do not apply a credit-spread valuation adjustment to reflect our own credit risk in determining fair value for these liabilities. SFAS No. 157 will require us to record all liabilities measured at fair value including the effect of the obligor's credit risk. As a result, we will have to apply a credit-spread adjustment in order to reflect our own credit risk in determining fair value for these liabilities,

which we expect would result in a lower recorded fair value for these liabilities.

Because SFAS No. 157 applies broadly to all fair value measurements, we have not completed our assessment of its requirements, the effects of which could extend beyond the matters discussed on the previous page. In accordance with the statement's provisions, we will record the initial effects of applying SFAS No. 157 by adjusting opening retained earnings as of the required January 1, 2008 adoption date for the effect of eliminating the close-out valuation adjustment for inception gains. The remaining impacts of adoption will be reflected in earnings in 2008. The ultimate impact of applying the provisions of SFAS No. 157 could be material to our, or BGE's, financial results.

FIN 48

In July 2006, the FASB issued Interpretation (FIN) No. 48, *Accounting for Uncertainty in Income Taxes*. FIN 48 provides guidance for the recognition and measurement of an entity's uncertain tax positions through the use of a more-likely-than-not threshold. This threshold would be used to evaluate whether each tax position will be sustained based solely on its technical merits and assuming examination by a taxing authority. FIN 48 must be applied to all tax positions beginning January 1, 2007. Based on the analysis performed to date, we estimate the adoption of FIN 48 will not have a material impact on our, or BGE's, financial results. As a result of pending implementation guidance, we are still evaluating the impact of FIN 48, and therefore the actual impact of FIN 48 on our, or BGE's, financial results could differ from the above estimate.

Accounting Standards Adopted

SFAS No. 158

In September 2006, the FASB issued SFAS No. 158, *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 106 and 132(R)*. SFAS No. 158 requires the underfunded status of defined benefit postretirement plans to be recognized as a liability in the balance sheets. Unrecognized actuarial losses or gains, unrecognized prior service costs, and unrecognized transition amounts are recognized as part of accumulated other comprehensive income, net of tax. Subsequent changes in funded status are recognized in the year in which changes occur through accumulated other comprehensive income. SFAS No. 158 was effective for us on December 31, 2006.

Although we adopted SFAS No. 158 effective December 31, 2006, we were required to remeasure the additional minimum pension liability prior to calculating the impact of adopting SFAS No. 158. As a result, we recorded a \$75.6 million after-tax increase to accumulated other comprehensive income to reduce the additional minimum pension liability at December 31, 2006. This reflected favorable asset returns and an increase in our discount rate assumption in 2006.

We recorded an after-tax decrease to accumulated other comprehensive income of \$169.5 million at December 31, 2006 upon the adoption of SFAS No. 158. This reflected the requirement in SFAS No. 158 to begin reflecting the funded status for postretirement benefit plans and to begin using the higher projected benefit obligation measure to reflect pension plan funded status. The adoption of SFAS No. 158 did not have any impact on BGE's financial results or our, or BGE's, debt covenants. We discuss the additional minimum pension liability and the adoption of SFAS No. 158 in more detail in *Note 7*.

FSP FIN 46R-6

In April 2006, the FASB issued Staff Position (FSP) FIN 46R-6, *Determining the Variability to Be Considered in Applying FASB Interpretation No. 46R*. FSP FIN 46R-6 provides that, in applying FASB Interpretation No. 46R, *Consolidation of Variable Interest Entities an Interpretation of ARB No. 51*, the reporting enterprise should consider the design of the entity, the nature of the entity's risks, and the purpose for which the entity was created. FSP FIN 46R-6 must be applied prospectively to new or modified contracts beginning July 1, 2006. The adoption of this FSP did not have a material impact on our, or BGE's, financial results.

FSP FAS 115-1 and FAS 124-1

In November 2005, FASB Staff Position SFAS 115-1 and SFAS 124-1 (FSP FAS 115-1 and FAS 124-1), *The Meaning of Other-Than-Temporary Impairment and its Application to Certain Investments*, was issued to replace the measurement and recognition criteria of EITF 03-1, *The Meaning of Other-Than-Temporary Impairment and its Application to Certain Investments*. FSP FAS 115-1 and FAS 124-1 references existing guidance in SFAS No. 115, SEC Staff Accounting Bulletin No. 59, *Accounting for Noncurrent Marketable Equity Securities*, and APB No. 18. FSP FAS 115-1 and FAS 124-1 requires an other-than-temporary analysis to be completed each reporting period (i.e., every quarter) beginning after December 15, 2005. The adoption of this standard did not have a material impact on our, or BGE's, financial results.

SAB 108

In September 2006, the Securities and Exchange Commission issued Staff Accounting Bulletin No. 108 (SAB 108), *Considering the Effects of Prior Year Misstatements when Quantifying Misstatements in Current Year Financial Statements*. SAB 108 was issued in order to eliminate the diversity in practice surrounding how public companies quantify financial statement misstatements.

SAB 108 establishes an approach that requires quantification of financial statement misstatements based on the effects of the misstatements on each financial statement and the related financial statement disclosures. This model requires quantification of errors based on both an income statement and balance sheet approach. SAB 108 required public companies to initially apply its provisions for fiscal periods ending after November 15, 2006.

The implementation of SAB 108 did not have any effect on our financial results.

88

2 Other Events

2006 Events

	Pre-Tax	After-Tax <i>(In millions)</i>
Gain on sale of gas-fired plants	\$ 73.8	\$ 47.1
Workforce reduction costs	(28.2)	(17.0)
Merger-related costs	(18.3)	(5.7)
Gain on initial public offering of Constellation Energy Partners LLC	28.7	17.9
Income from discontinued operations		
High Desert	294.1	186.9
International investments	1.4	0.9
Total income from discontinued operations	295.5	187.8
Total other items	\$ 351.5	\$ 230.1

Sale of Gas-Fired Plants

In December 2006, we completed the sale of the following natural gas-fired plants owned by our merchant energy business:

Facility	Capacity (MW)	Unit Type	Location
High Desert	830	Combined Cycle	California
Rio Nogales	800	Combined Cycle	Texas
Holland	665	Combined Cycle	Illinois
University Park	300	Peaking	Illinois
Big Sandy	300	Peaking	West Virginia
Wolf Hills	250	Peaking	Virginia

We sold these gas-fired plants for cash of \$1.6 billion, which is subject to working capital adjustments, and recognized a pre-tax gain on the sale of \$259.0 million of which \$73.8 million was included in *Gain on sale of gas-fired plants* and \$185.2 million was included in *Income from discontinued operations* in our Consolidated Statements of Income.

At the time of the agreement for sale, we evaluated these plants for classification as discontinued operations under SFAS No. 144. Discontinued operations classification only applies to assets held for sale that meet the definition of a component of an entity. A component of an entity comprises operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity.

High Desert met the requirements to be classified as a discontinued operation because it had a power sales agreement for its full output, was determined to be a component of Constellation Energy, and had separately identifiable cash flows. The table below provides additional detail about the amounts recorded in *Income from discontinued operations* related to our High Desert facility.

The remaining gas-fired plants were managed within our merchant business as a group or on a portfolio basis because they have aggregated risks, were hedged as a group, and generated joint cash flows. These gas-fired plants do not meet the requirements to be classified as discontinued operations. The results of operations for these gas-fired plants, as well as the \$73.8 million pre-tax gain on sale, remain classified in continuing operations.

International Investments

In the fourth quarter of 2005, we completed the sale of Constellation Power International Investments, Ltd. (CPII). We recognized an after-tax gain of \$0.9 million for the year ended December 31, 2006 due to the resolution of an outstanding contingency related to the sale. We discuss the details of the outstanding contingency later in this Note.

Presented in the table below are the amounts related to those discontinued operations that are included in *Income from discontinued operations* in our Consolidated Statements of Income:

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

	High Desert			Oleander			International Investments			Total	
	2006	2005	2004	2006	2005	2004	2006	2005	2004	2006	2004
	<i>(In millions)</i>										
Revenues	\$ 161.2	\$ 163.7	\$ 159.2	\$	\$ 14.7	\$ 42.5	\$	\$ 228.1	\$ 219.7	\$ 161.2	\$ 421.4
Income before income taxes	108.9	111.0	106.9		8.5	20.5		14.5	16.8	108.9	144.2
Net income	70.2	70.8	68.4		5.3	12.6		4.5	9.4	70.2	90.4
Pre-tax impairment charge					(4.8)					(4.8)	
After-tax impairment charge					(3.0)					(3.0)	
Pre-tax gain on sale	185.2				1.2		1.4	25.6		186.6	26.8
After-tax gain on sale	116.7				0.7		0.9	16.1		117.6	16.8
Income from discontinued operations, net of taxes	186.9	70.8	68.4		3.0	12.6	0.9	20.6	9.4	187.8	90.4

We recognized a pre-tax loss from discontinued operations of \$(75.6) million, before income taxes of \$(26.5) million from the sale of our Hawaiian Geothermal facility in 2004. We discuss the sale of this facility later in this Note.

Workforce Reduction Costs

In March 2006, we approved a restructuring of the workforce at our Ginna nuclear facility. In connection with this restructuring, 32 employees were terminated. During the quarter ended March 31, 2006, we recognized costs of \$2.2 million pre-tax related to recording a liability for severance and other benefits under our existing benefit programs.

We completed this workforce reduction effort in 2006. As a result, no involuntary severance liability was recorded at December 31, 2006.

In July 2006, we announced a planned restructuring of the workforce at our Nine Mile Point nuclear facility. We recognized costs during the quarter ended September 30, 2006 of \$15.1 million pre-tax related to the elimination of 126 positions associated with this restructuring. We also initiated a restructuring of the workforce at our Calvert Cliffs nuclear facility during the third quarter of 2006 and we recognized costs of \$2.9 million pre-tax related to the elimination of 30 positions associated with this restructuring.

In addition, we incurred a pre-tax settlement charge of \$12.7 million in accordance with Statement of Financial Accounting Standards (SFAS) No. 88, *Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits*. This charge reflects recognition of the portion of deferred actuarial gains and losses associated with employees who were terminated as part of the restructuring or retired in 2006 and who elected to receive their pension benefit in the form of a lump-sum payment. In accordance with SFAS No. 88, a settlement charge must be recognized when lump-sum payments exceed annual pension plan service and interest cost. The total SFAS No. 88 settlement charge incurred in 2006 includes a pre-tax charge of \$8.0 million as a result of the Nine Mile Point restructuring. We discuss the settlement charges that we recorded during 2006 in *Note 7*.

The following table summarizes the status of the involuntary severance liability for Nine Mile Point and Calvert Cliffs at December 31, 2006:

	<i>(In millions)</i>
Initial severance liability balance	\$ 19.6
Amounts recorded as pension and postretirement liabilities	(7.3)
Net cash severance liability	12.3
Cash severance payments	(3.2)
Other	
Severance liability balance at December 31, 2006	\$ 9.1

The severance liability above includes \$1.6 million of costs that the joint owner of Nine Mile Point Unit 2 reimbursed us.

Merger-Related costs

We incurred costs during 2006 related to the proposed merger with FPL Group. The merger was terminated in October 2006. These costs totaled \$18.3 million pre-tax for 2006. In addition, during 2006 we recognized tax benefits of \$5.3 million on merger costs incurred in 2005 that were not considered deductible for income tax purposes until the termination of the merger in 2006. Our total pre-tax merger-related costs were \$35.3 million.

Initial Public Offering of Constellation Energy Partners LLC

In November 2006, Constellation Energy Partners LLC (CEP), a limited liability company formed by Constellation Energy, completed an initial public offering of 5.2 million common units at \$21 per unit. The initial public offering resulted in cash proceeds of \$101.3 million, after expenses associated with the offering, for Constellation Energy.

We continue to own approximately 54% of CEP and as a result, we continue to consolidate CEP. As a result of the initial public offering of CEP, we recognized a pre-tax gain of \$28.7 million, or \$17.9 million after recording deferred taxes on the gain.

2005 Events

	Pre-Tax	After-Tax
	<i>(In millions)</i>	
Merger-related costs	\$ (17.0)	\$ (15.6)
Workforce reduction costs	(4.4)	(2.6)
Income from discontinued operations		

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

High Desert	111.0	70.8
International investments	40.1	20.6
Oleander	4.9	3.0
Total income from discontinued operations	156.0	94.4
Total other items	\$ 134.6	\$ 76.2

Income from discontinued operations reflects the reclassification of earnings from our *High Desert* facility as required by SFAS No. 144.

Merger-Related Costs

We incurred external costs associated with the execution of the agreement relating to our proposed merger with FPL Group. We discuss the terminated merger in more detail in *Note 15*.

Workforce Reduction Costs

As a result of the workforce reduction efforts initiated in 2004, in 2005 we were required to record a pre-tax settlement charge in our Consolidated Statements of Income of \$4.4 million for one of our qualified pension plans under SFAS No. 88.

In 2005, we completed the 2004 workforce reduction effort. As a result, no involuntary severance liability was recorded at December 31, 2005.

Discontinued Operations**Oleander**

In March 2005, we reached an agreement in principle to sell our Oleander generating facility, a four-unit peaking plant located in Florida. Our merchant energy business classified Oleander as held for sale and performed an impairment test under SFAS No. 144 as of March 31, 2005. The impairment test indicated that the carrying value of the plant was higher than its fair value less costs to sell, and therefore in March 2005 we recorded an impairment charge of \$4.8 million pre-tax as part of discontinued operations.

In June 2005, we completed the sale of this facility for \$217.6 million, and recognized a pre-tax gain on the sale of \$1.2 million as part of discontinued operations.

International Investments

In October 2005, we sold CPII. CPII held our other nonregulated international investments, which represented an interest in a Panamanian electric distribution company and an investment in a fund that holds interests in two South American energy projects. We received cash of \$71.8 million and recognized a pre-tax gain of approximately \$25.6 million, or \$16.1 million after-tax. An additional \$3.6 million of the sales price was contingent upon the collection of certain receivables by March 31, 2006. At December 31, 2005, we recognized approximately \$2.2 million of this amount based on cash collections, which was included in the \$25.6 million pre-tax gain. We recognized the remaining \$1.4 million of contingent proceeds in 2006 once realization was assured beyond a reasonable doubt.

2004 Events

	Pre-Tax	After-Tax (In millions)
Workforce reduction costs	\$ (9.7)	\$ (5.9)
Recognition of 2003 synthetic fuel tax credits		35.9
(Loss) income from discontinued operations		
Hawaiian geothermal facility	(75.6)	(49.1)
High Desert	106.9	68.4
International investments	16.8	9.4
Oleander	20.5	12.6
Total income from discontinued operations	68.6	41.3
Total other items	\$ 58.9	\$ 71.3

Income from discontinued operations reflects the reclassification of earnings from our High Desert facility, the Oleander facility, and our international investments as required by SFAS No. 144.

Workforce Reduction Costs

In the fourth quarter of 2004, we approved a restructuring of the work forces of the Nine Mile Point and Calvert Cliffs nuclear generating stations that was effective in January 2005. In connection with this restructuring, approximately 108 employees received severance and other benefits under our existing benefit programs. At December 31, 2004, we accrued the estimated total cost of this reduction in workforce of \$9.7 million pre-tax, or \$5.9 million after-tax, in accordance with applicable accounting requirements.

Synthetic Fuel Tax Credits

In 2003, we purchased a 99% ownership in a South Carolina facility that produces synthetic fuel. We did not recognize in our Consolidated Statements of Income the tax benefit of \$35.9 million for credits claimed on our South Carolina facility in 2003 pending receipt of a favorable private letter ruling from the Internal Revenue Service (IRS). In April 2004, we received a favorable private letter ruling. We believe receipt of the private letter ruling provided assurance that it is highly probable that the credits will be sustained. Therefore, we recognized the tax benefit of \$35.9 million in our Consolidated Statements of Income in 2004. We discuss the synthetic fuel tax credits in more detail in *Note 10*.

Discontinued Operations**Geothermal Facility**

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

In March 2004, management committed to a plan to sell our geothermal generating facility in Hawaii that met the held for sale criteria under SFAS No. 144. Under SFAS No. 144, we record assets and liabilities held for sale at the lesser of the carrying amount or fair value less cost to sell.

The fair value of the facility as of March 31, 2004, based on the bids under consideration, was below carrying value. Therefore, we recorded a \$71.6 million pre-tax, or \$47.3 million after-tax, impairment charge during the first quarter of 2004. We reported the after-tax impairment charge as a component of Loss from discontinued operations in our Consolidated Statements of Income. Additionally, we recognized \$1.5 million pre-tax, or \$1.0 million after-tax, of earnings from the facility for the quarter ended March 31, 2004 as a component of Loss from discontinued operations.

In June 2004, we completed the sale of the facility. Based on the final sales price and other costs incurred over the remainder of the year, we recognized an additional loss of \$5.5 million pre-tax, or \$2.8 million after-tax. The sale of this facility was reflected in our merchant energy business reportable segment.

3 Information by Operating Segment

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Our reportable operating segments are Merchant Energy, Regulated Electric, and Regulated Gas:

◆ Our merchant energy business is nonregulated and includes:

full requirements load-serving sales of energy and capacity to utilities, cooperatives, and commercial, industrial, and governmental customers, structured transactions and risk management services for various customers (including hedging of output from generating facilities and fuel costs), deployment of risk capital through portfolio management and trading activities, gas retail energy products and services to commercial, industrial, and governmental customers, fossil, nuclear, and interests in hydroelectric generating facilities and qualifying facilities, fuel processing facilities, and power projects in the United States, upstream (exploration and production) and downstream (transportation and storage) natural gas operations, coal sourcing services for the variable or fixed supply needs of global customers, and generation operations and maintenance services.

◆ Our regulated electric business purchases, transmits, distributes, and sells electricity in Central Maryland.

◆ Our regulated gas business purchases, transports, and sells natural gas in Central Maryland.

Our remaining nonregulated businesses:

◆ design, construct, and operate heating, cooling, and cogeneration facilities for commercial, industrial, and governmental customers throughout North America, and

◆ provide home improvements, service electric and gas appliances, service heating, air conditioning, plumbing, electrical, and indoor air quality systems, and provide natural gas marketing to residential customers in Central Maryland.

During 2006, we sold six of our gas-fired facilities. In addition, we own several investments that we do not consider to be core operations. These include financial investments and real estate projects. During 2005, we sold our other nonregulated international investments. We discuss the sales of our gas-fired plants and our international investments in more detail in *Note 2*.

Our Merchant Energy, Regulated Electric, and Regulated Gas reportable segments are strategic businesses based principally upon regulations, products, and services that require different technology and marketing strategies. We evaluate the performance of these segments based on net income. We account for intersegment revenues using market prices. We present a summary of information by operating segment on the next page.

2004						
Unaffiliated revenues	\$ 9,203.7	\$ 1,967.6	\$ 755.0	\$ 200.9	\$	\$ 12,127.2
Intersegment revenues	984.6	0.1	2.0	0.2	(986.9)	
Total revenues	10,188.3	1,967.7	757.0	201.1	(986.9)	12,127.2
Depreciation and amortization	221.9	194.2	48.1	24.2		488.4
Fixed charges	196.2	80.3	29.1	15.4	5.8	326.8
Income tax expense (benefit)	22.8	86.8	15.9	(7.1)		118.4
Income from discontinued operations	31.9			9.4		41.3
Net income (loss) (c)	389.9	131.1	22.2	(3.5)		539.7
Segment assets	12,395.6	3,402.2	1,163.4	675.7	(289.8)	17,347.1
Capital expenditures	455.0	209.0	56.0	42.0		762.0

Certain prior-year amounts have been reclassified to conform with the current year's presentation. The reclassifications primarily relate to operations that have been classified as discontinued operations in the current year.

(a) *Our merchant energy business recognized an after-tax gain of \$47.1 million on sale of gas-fired plants and an after-tax gain of \$17.9 million on the initial public offering of Constellation Energy Partners LLC as discussed in more detail in Note 2. Our merchant energy business, our regulated electric business, our regulated gas business, and our other nonregulated businesses recognized after-tax charges of \$21.3 million, \$0.8 million, \$0.4 million, and \$0.2 million for merger-related costs and workforce reduction costs as described in more detail in Note 2.*

(b) *Our merchant energy business, our regulated electric business, our regulated gas business, and our other nonregulated businesses recognized after-tax charges of \$13.0 million, \$3.7 million, \$1.3 million, and \$0.2 million for merger-related costs and workforce reduction costs as described in more detail in Note 2.*

(c) *Our merchant energy business recognized after-tax income of \$30.0 million, for recognition of 2003*

synthetic fuel tax credits and workforce reduction costs as described in more detail in Note 2.

93

4 Investments

Investments in Qualifying Facilities and Power Projects

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Our merchant energy business holds up to a 50% voting interest in 24 operating domestic energy projects that consist of electric generation, fuel processing, or fuel handling facilities. Of these 24 projects, 17 are qualifying facilities that receive certain exemptions and pricing under the Public Utility Regulatory Policies Act of 1978 based on the facilities' energy source or the use of a cogeneration process.

Investments in qualifying facilities and domestic power projects held by our merchant energy business consist of the following:

<i>At December 31,</i>	2006	2005
	<i>(In millions)</i>	
Coal	\$ 125.7	\$ 127.8
Hydroelectric	55.1	55.9
Geothermal	40.5	43.7
Biomass	46.6	48.0
Fuel Processing	33.7	23.8
Solar	7.0	7.0
Total	\$ 308.6	\$ 306.2

Investments in qualifying facilities and domestic power projects were accounted for under the following methods:

<i>At December 31,</i>	2006	2005
	<i>(In millions)</i>	
Equity method	\$ 301.6	\$ 299.2
Cost method	7.0	7.0
Total power projects	\$ 308.6	\$ 306.2

Our percentage voting interest in qualifying facilities and domestic power projects accounted for under the equity method ranges from 16% to 50%. Equity in earnings of these power projects was \$13.8 million in 2006, \$3.6 million in 2005, and \$18.0 million in 2004.

Our power projects include investments of \$220.5 million in 2006 and \$228.6 million in 2005 that sell electricity in California under power purchase agreements.

Investments Classified as Available-for-Sale

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We classify the following investments as available-for-sale:

- ◆ nuclear decommissioning trust funds,
- ◆ marketable equity securities, and
- ◆ trust assets securing certain executive benefits.

This means we do not expect to hold them to maturity, and we do not consider them trading securities.

We show the fair values, gross unrealized gains and losses, and amortized cost basis for all of our available-for-sale securities, in the following tables. We use specific identification to determine cost in computing realized gains and losses.

At December 31, 2006	Amortized Cost Basis	Unrealized Gains	Unrealized Losses	Fair Value
		<i>(In millions)</i>		
Marketable equity securities	\$ 811.0	\$ 221.1	\$ (3.3)	\$ 1,028.8
Corporate debt and U.S. treasuries	160.1	1.9	(0.3)	161.7
State municipal bonds	68.1	5.4	(0.2)	73.3
Totals	\$ 1,039.2	\$ 228.4	\$ (3.8)	\$ 1,263.8

At December 31, 2005	Amortized Cost Basis	Unrealized Gains	Unrealized Losses	Fair Value
		<i>(In millions)</i>		
Marketable equity securities	\$ 804.4	\$ 112.7	\$ (3.8)	\$ 913.3
Corporate debt and U.S. treasuries	114.8	0.2	(1.4)	113.6
State municipal bonds	107.1	2.8	(0.8)	109.1
Totals	\$ 1,026.3	\$ 115.7	\$ (6.0)	\$ 1,136.0

In addition to the above securities, the nuclear decommissioning trust funds included \$24.1 million at December 31, 2006 and \$12.2 million at December 31, 2005 of cash and cash equivalents.

The preceding tables include \$206.1 million in 2006 of net unrealized gains and \$110.3 million in 2005 of net unrealized gains associated with the nuclear decommissioning trust funds that are reflected as a change in the nuclear decommissioning trust funds in our Consolidated Balance Sheets.

We have unrealized losses relating to certain available-for-sale investments included in our decommissioning trust funds. We believe these losses are temporary in nature and expect the investments to recover their value in the future. We show the fair values and unrealized losses of our investments that were in a loss position at December 31, 2006 and 2005 in the tables below.

At December 31, 2006

Description of Securities	Fair Value	Less than 12 months	12 months or more		Fair Value	Total
		Unrealized Losses	Fair Value	Unrealized Losses		Unrealized Losses
			<i>(In millions)</i>			
Marketable equity securities	\$ 9.5	\$ (0.8)	\$ 12.4	\$ (1.7)	\$ 21.9	\$ (2.5)
Corporate debt and U.S. treasuries	10.3		23.7	(0.3)	34.0	(0.3)
State municipal bonds	4.8		14.0	(0.2)	18.8	(0.2)
Total temporarily impaired securities	\$ 24.6	\$ (0.8)	\$ 50.1	\$ (2.2)	\$ 74.7	\$ (3.0)

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

At December 31, 2005

Description of Securities	Fair Value	Less than 12 months	12 months or more		Fair Value	Total
		Unrealized Losses	Fair Value	Unrealized Losses		Unrealized Losses
<i>(In millions)</i>						
Marketable equity securities	\$ 22.3	\$ (2.9)	\$ 2.3	\$ (0.3)	\$ 24.6	\$ (3.2)
Corporate debt and U.S. treasuries	71.8	(1.1)	11.8	(0.3)	83.6	(1.4)
State municipal bonds	46.0	(0.6)	11.8	(0.2)	57.8	(0.8)
Total temporarily impaired securities	\$ 140.1	\$ (4.6)	\$ 25.9	\$ (0.8)	\$ 166.0	\$ (5.4)

Gross and net realized gains and losses on available-for-sale securities were as follows:

	2006	2005	2004
		<i>(In millions)</i>	
Gross realized gains	\$ 13.3	\$ 12.3	\$ 4.1
Gross realized losses	(13.0)	(9.3)	(7.7)
Net realized gains (losses)	\$ 0.3	\$ 3.0	\$ (3.6)

Gross realized losses for 2004 include a \$4.5 million pre-tax impairment charge we recognized on a nuclear decommissioning trust fund investment that we believed represented an other than temporary decline in value.

The corporate debt securities, U.S. Government agency obligations, and state municipal bonds mature on the following schedule:

At December 31, 2006

	<i>(In millions)</i>	
Less than 1 year	\$	7.6
1-5 years		74.9
5-10 years		62.4
More than 10 years		90.1
Total maturities of debt securities	\$	235.0

Investments in Variable Interest Entities

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We have a significant interest in the following variable interest entities (VIE) for which we are not the primary beneficiary:

VIE	Nature of Involvement	Date of Involvement
Power projects and fuel supply entities	Equity investment and guarantees	Prior to 2003
Power contract monetization entities	Power sale agreements, loans, and guarantees	March 2005
Oil & gas fields	Equity investment	May 2006
Retail power supply	Power sale agreement	September 2006

We discuss the nature of our involvement with the power contract monetization VIEs in the *Customer Contract Restructuring* section below.

The following is summary information available as of December 31, 2006 about the VIEs in which we have a significant interest, but are not the primary beneficiary:

	Power Contract Monetization VIEs	All Other VIEs <i>(In millions)</i>	Total
Total assets	\$ 746.1	\$ 355.5	\$ 1,101.6
Total liabilities	592.6	162.0	754.6
Our ownership interest		51.5	51.5
Other ownership interests	153.5	142.0	295.5
Our maximum exposure to loss	65.8	92.3	158.1

The maximum exposure to loss represents the loss that we would incur in the unlikely event that our interests in all of these entities were to become worthless and we were required to fund the full amount of all guarantees associated with these entities. Our maximum exposure to loss as of December 31, 2006 consists of the following:

- ◆ outstanding receivables, loans, and letters of credit totaling \$94.0 million,
- ◆ the carrying amount of our investment totaling \$51.4 million, and
- ◆ debt and performance guarantees totaling \$12.7 million.

We assess the risk of a loss equal to our maximum exposure to be remote.

Customer Contract Restructuring

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

In March 2005, our merchant energy business closed a transaction in which we assumed from a counterparty two power sales contracts with existing VIEs. Under the contracts, we sell power to the VIEs which, in turn, sell that power to an electric distribution utility through 2013.

The VIEs previously were created by the counterparty to issue debt in order to monetize the value of the original contracts to purchase and sell power. The difference between the contract prices at which the VIEs purchase and sell power is used to service the debt of the VIEs, which totaled \$568 million at December 31, 2006.

The market price for power at the closing of our transaction was higher than the contract price under the existing power sales contracts we assumed. Therefore, we received compensation totaling \$308.5 million, equal to the net present value of the difference between the contract price under the power sales contracts and the market price of power at closing. We used a portion of this amount to settle \$68.5 million of existing derivative liabilities with the same counterparty, and we also loaned \$82.8 million to the holder of the equity in the VIEs. As a result, we received net cash at closing of \$157.2 million. We also guaranteed our subsidiaries' performance under the power sales contracts.

95

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

The table below summarizes the transaction and the net cash received at closing:

	<i>(In millions)</i>
Gross compensation from original power sales contracts counterparty equal to fair value of power sales contracts at closing	\$ 308.5
Settlement of existing derivative liabilities	(68.5)
Third-party loan secured by equity in VIE	(82.8)
Net cash received at closing	\$ 157.2

We recorded the closing of this transaction in our financial statements as follows:

	Balance Sheet	Cash Flows
Fair value of power sales contracts assumed (designated as cash-flow hedge)	Risk management liabilities	Financing cash inflow
Settlement of existing derivative liabilities	Mark-to-market and risk management liabilities	Operating cash outflow
Third-party loan	Other assets	Investing cash outflow

We recorded the gross compensation we received to assume the power sales contracts as a financing cash inflow because it constitutes a prepayment for a portion of the market price of power, which we will sell to the VIEs over the term of the contracts and does not represent a cash inflow from current period operating activities. We record the ongoing cash flows related to the sale of power to the VIEs as a financing cash inflow in accordance with SFAS No. 149, *Amendment of FASB Statement No. 133 on Derivative and Hedging Activities*.

If the electric distribution utility were to default under its obligation to buy power from the VIEs, the equity holder could transfer its equity interests to us in lieu of repaying the loan. In this event, we would have the right to seek recovery of our losses from the electric distribution utility.

5 Intangible Assets

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Goodwill

Goodwill is the excess of the cost of an acquisition over the fair value of the net assets acquired. Our goodwill balance is primarily related to our merchant energy business acquisitions that occurred in 2002 and 2003. The changes in the carrying amount of goodwill for the years ended December 31, 2006 and 2005 are as follows:

2006	Balance at January 1,	Goodwill Acquired	Other(a)	Balance at December 31,
			(In millions)	
Goodwill	\$ 147.1	\$ 11.1	\$ (0.6)	\$ 157.6

2005	Balance at January 1,	Goodwill Acquired	Other	Balance at December 31,
			(In millions)	
Goodwill	\$ 144.8	\$ 2.3	\$	\$ 147.1

(a) Other represents purchase price adjustments.

Goodwill is not amortized; rather, it is evaluated for impairment at least annually. We evaluated our goodwill in 2006 and 2005 and determined that it was not impaired. For tax purposes, \$128.5 million of our goodwill balance is deductible.

Intangible Assets Subject to Amortization

Intangible assets with finite lives are subject to amortization over their estimated useful lives. The primary assets included in this category are as follows:

At December 31,	Gross Carrying Amount	2006 Accumul- ated Amortiz- ation	Net Asset	Gross Carrying Amount	2005 Accumul- ated Amortiz- ation	Net Asset
			(In millions)			
Software	\$ 392.3	\$ (182.6)	\$ 209.7	\$ 364.7	\$ (156.5)	\$ 208.2
Permits and licenses	60.4	(5.9)	54.5	49.4	(12.6)	36.8
Operating manuals and procedures	38.5	(7.1)	31.4	38.6	(6.0)	32.6
Other	26.3	(17.2)	9.1	29.7	(14.3)	15.4
Total	\$ 517.5	\$ (212.8)	\$ 304.7	\$ 482.4	\$ (189.4)	\$ 293.0

BGE had intangible assets with a gross carrying amount of \$191.3 million and accumulated amortization of \$109.2 million at December 31, 2006 and \$181.4 million and accumulated amortization of \$98.7 million at December 31, 2005 that are included in the table above. Substantially all of BGE's intangible assets relate to software.

We recognized amortization expense related to our intangible assets as follows:

Year Ended December 31,	2006	2005	2004
		(In millions)	
Nonregulated businesses	\$ 37.2	\$ 30.6	\$ 25.0
BGE	18.6	26.3	41.4
Total Constellation Energy	\$ 55.8	\$ 56.9	\$ 66.4

The following is our, and BGE's, estimated amortization expense for 2007 through 2011 for the intangible assets included in our, and BGE's, Consolidated Balance Sheets at December 31, 2006:

Year Ended December 31,	2007	2008	2009	2010	2011
			(In millions)		
Estimated amortization expense Nonregulated businesses	\$ 41.6	\$ 36.3	\$ 29.0	\$ 20.8	\$ 15.2
Estimated amortization expense BGE	19.3	16.7	13.4	12.0	9.9
Total estimated amortization expense Constellation Energy	\$ 60.9	\$ 53.0	\$ 42.4	\$ 32.8	\$ 25.1

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Unamortized Energy Contracts

As discussed in *Note 1*, unamortized energy contract assets and liabilities represent the remaining unamortized balance of nonderivative energy contracts acquired or derivatives designated as normal purchases and normal sales, which we previously recorded as mark-to-market energy or risk management assets and liabilities.

During 2005, we acquired several pre-existing nonderivative contracts that had been originated by other parties in prior periods when market prices were lower than current levels. We received approximately \$530 million in cash and other consideration and recorded a liability in

Unamortized energy contracts. In addition, during 2005, we designated as normal purchases and normal sales contracts that we had previously recorded as cash-flow hedges in Risk management liabilities. This resulted in a reclassification of \$888.5 million from Risk management liabilities to Unamortized energy contract liabilities.

We present separately in our Consolidated Balance Sheets the net unamortized energy contract assets and liabilities for these contracts. The table below presents the gross and net carrying amount and accumulated amortization of the net liability that we have recorded in our Consolidated Balance Sheets:

<i>At December 31</i>	Carrying Amount	2006 Accumul- ated Amortiz- ation	Net Liability	Carrying Amount	2005 Accumul- ated Amortiz- ation	Net Liability
			<i>(In millions)</i>			
Unamortized energy contracts, net	\$ (1,642.0)	\$ 464.5	\$ (1,177.5)	\$ (1,449.2)	\$ 37.8	\$ (1,411.4)

The table below presents the estimated net favorable impact on our operating results for the amortization for these assets and liabilities over the next five-years:

<i>Year Ended December 31,</i>	2007	2008	2009	2010	2011
			<i>(In millions)</i>		
Estimated amortization	\$ 342.8	\$ 255.4	\$ 178.0	\$ 166.6	\$ 41.8

6 Regulatory Assets (net)

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

As discussed in *Note 1*, the Maryland PSC and the FERC provide the final determination of the rates we charge our customers for our regulated businesses. Generally, we use the same accounting policies and practices used by nonregulated companies for financial reporting under accounting principles generally accepted in the United States of America. However, sometimes the Maryland PSC or FERC orders an accounting treatment different from that used by nonregulated companies to determine the rates we charge our customers. When this happens, we must defer certain regulated expenses and income in our Consolidated Balance Sheets as regulatory assets and liabilities. We then record them in our Consolidated Statements of Income (using amortization) when we include them in the rates we charge our customers.

We summarize regulatory assets and liabilities in the following table, and we discuss each of them separately below.

<i>At December 31,</i>	2006	<i>(In millions)</i>	2005
Deferred fuel costs			
Rate stabilization deferral	\$ 326.9		\$
Other	37.8		16.2
Electric generation-related regulatory asset	154.8		173.6
Net cost of removal	(161.3))	(148.7)
Income taxes recoverable through future rates (net)	67.1		70.9
Deferred postretirement and postemployment benefit costs	19.3		22.6
Deferred environmental costs	10.0		14.9
Workforce reduction costs	4.9		7.3
Other (net)	(8.0))	(2.5)
Total regulatory assets (net)	451.5		154.3
Less: Current portion of regulatory assets (net)	62.5		
Long-term portion of regulatory assets (net)	\$ 389.0		\$ 154.3

Deferred Fuel Costs

Rate Stabilization Deferral

In June 2006, Senate Bill 1 was enacted in Maryland, which imposes a rate stabilization measure that caps rate increases by BGE for residential electric customers at 15% from July 1, 2006 to May 31, 2007. As a result, BGE is recording a regulatory asset on its Consolidated Balance Sheets equal to the difference between the costs to purchase power and the revenues collected from customers, as well as related carrying charges based on short-term interest rates from July 1, 2006 to May 31, 2007. During 2006, BGE deferred \$326.9 million of electricity purchased for resale expenses and carrying charges as a regulatory asset related to the rate stabilization plan. BGE will amortize the regulatory asset to earnings over a period not to exceed ten years once collection from customers begins.

Other

As described in *Note 1*, deferred fuel costs are the difference between our actual costs of purchased energy and our fuel rate revenues collected from customers. We reduce deferred fuel costs as we collect them from or refund them to our customers.

We exclude deferred fuel costs from rate base because their existence is relatively short-lived. These costs are recovered in the following year through our fuel rates.

Electric Generation-Related Regulatory Asset

As a result of the deregulation of electric generation, BGE ceased to meet the requirements for the application of SFAS No. 71 for the previous electric generation portion of its business. In accordance with SFAS No. 101, *Regulated Enterprises Accounting for the Discontinuation of Application of FASB Statement No. 71*, and EITF 97-4, *Deregulation of the Pricing of Electricity Issues Related to the Application of FASB Statements No. 71 and 101*. BGE wrote-off all of its individual, generation-related regulatory assets and liabilities. BGE established a single, generation-related regulatory asset to be collected through its regulated transmission and distribution business, which is being amortized on a basis that approximates the pre-existing individual regulatory asset amortization schedules.

A portion of this regulatory asset represents income taxes recoverable through future rates that do not earn a regulated rate of return. These amounts were \$89.4 million as of December 31, 2006 and \$97.9 million as of December 31, 2005. We will continue to amortize this amount through 2017.

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

Another portion of this regulatory asset represents the decommissioning and decontamination fund payment for federal uranium enrichment facilities that do not earn a regulated rate of return on the rate base investment. These amounts were \$5.5 million at December 31, 2006 and \$8.6 million at December 31, 2005. Prior to the deregulation of electric generation, these costs were recovered through the electric fuel rate mechanism, and were excluded from rate base. We will continue to amortize this amount through 2008.

Net Cost of Removal

As discussed in *Note 1*, we use the group depreciation method for the regulated business. This method is currently an acceptable method of accounting under accounting principles generally accepted in the United States of America and is widely used in the energy, transportation, and telecommunication industries.

Historically, under the group depreciation method, the anticipated costs of removing assets upon retirement were provided for over the life of those assets as a component of depreciation expense. However, effective January 1, 2003, we adopted SFAS No. 143, *Accounting for Asset Retirement Obligations*. In addition to providing the accounting requirements for recognizing an estimated liability for legal obligations associated with the retirement of tangible long-lived assets, SFAS No. 143 precludes the recognition of expected net future costs of removal as a component of depreciation expense or accumulated depreciation.

BGE is required by the Maryland PSC to use the group depreciation method, including cost of removal, under regulatory accounting. For ratemaking purposes, net cost of removal is a component of accumulated depreciation and is included as a net reduction to BGE's rate base investment. In accordance with SFAS No. 71, BGE continues to accrue for the future cost of removal for its regulated gas and electric assets by increasing its regulatory liability. This liability is relieved when actual removal costs are incurred.

Income Taxes Recoverable Through Future Rates (net)

As described in *Note 1*, income taxes recoverable through future rates are the portion of our net deferred income tax liability that is applicable to our regulated business, but has not been reflected in the rates we charge our customers. These income taxes represent the tax effect of temporary differences in depreciation and the allowance for equity funds used during construction, offset by differences in deferred tax rates and deferred taxes on deferred investment tax credits. We amortize these amounts as the temporary differences reverse.

Deferred Postretirement and Postemployment Benefit Costs

Deferred postretirement and postemployment benefit costs are the costs we recorded under SFAS No. 106, *Employers' Accounting for Postretirement Benefits Other Than Pensions*, and SFAS No. 112, *Employers' Accounting for Postemployment Benefits*, in excess of the costs we included in the rates we charge our customers. We began amortizing these costs over a 15-year period in 1998.

Deferred Environmental Costs

Deferred environmental costs are the estimated costs of investigating and cleaning up contaminated sites we own. We discuss this further in *Note 12*. We amortized \$21.6 million of these costs (the amount we had incurred through October 1995) and are amortizing \$6.4 million of these costs (the amount we incurred from November 1995 through June 2000) over 10-year periods in accordance with the Maryland PSC's orders. We applied for and received rate relief for an additional \$5.4 million of clean-up costs incurred during the period from July 2000 through November 2005. These costs are being amortized over a 10-year period that began in January 2006.

Workforce Reduction Costs

The portions of the costs associated with our Voluntary Special Early Retirement Program and workforce reduction programs that relate to BGE's gas business are deferred as regulatory assets in accordance with the Maryland PSC's orders in prior rate cases. As a result of a 2005 gas base rate case, the remaining regulatory assets associated with workforce reductions totaling \$7.3 million as of December 31, 2005 are being amortized over a 3-year period that began in January 2006. These remaining regulatory assets were previously amortized over 5-year periods beginning in January and February 2002.

Other (Net)

Other regulatory assets are comprised of a variety of current assets and liabilities that do not earn a regulatory rate of return due to their short-term nature.

7 Pension, Postretirement, Other Postemployment, and Employee Savings Plan Benefits

Edgar Filing: BALTIMORE GAS & ELECTRIC CO - Form 10-K

We offer pension, postretirement, other postemployment, and employee savings plan benefits. BGE employees participate in the benefit plans that we offer. We describe each of our plans separately below. Nine Mile Point offers its own pension, postretirement, other postemployment, and employee savings plan benefits to its employees. The benefits for Nine Mile Point are included in the tables beginning below.

We use a December 31 measurement date for our pension, postretirement, other postemployment, and employee savings plans. In 2006, the FASB issued SFAS No. 158, which was adopted on December 31, 2006. We discuss SFAS No. 158 in more detail in *Note 1*. The following table summarizes our defined benefit liabilities and their classification in our Consolidated Balance Sheets:

<i>At December 31,</i>	2006	2005
	<i>(In millions)</i>	
Pension benefits	\$ 468.6	\$ 401.4
Postretirement benefits	441.5	327.9
Postemployment benefits	57.0	54.7
Total defined benefit obligations	967.1	784.0
Less: Amount recorded in accrued expenses and other*	38.8	
Total noncurrent defined benefit obligations	\$ 928.3	\$ 784.0

* Amount recorded as current portion of defined benefit liability in 2006 is based on the expected cash payments associated with unfunded plans during the next 12 months. Constellation Energy did not record the current portion of its defined benefit obligation prior to the December 2006 implementation of SFAS No. 158.

Pension Benefits

We sponsor several defined benefit pension plans for our employees. These include basic qualified plans that most employees participate in and several nonqualified plans that are available only to certain employees. A defined benefit plan specifies the amount of benefits a plan participant is to receive using information about the participant. Employees do not contribute to these plans. Generally, we calculate the benefits under these plans based on age, years of service, and pay.

Sometimes we amend the plans retroactively. These retroactive plan amendments require us to recalculate benefits related to participants' past service. We amortize the change in the benefit costs from these plan amendments on a straight-line basis over the average remaining service period of active employees.

We fund the qualified plans by contributing at least the minimum amount required under IRS regulations. We calculate the amount of funding using an actuarial method called the projected unit credit cost method. The assets in all of the plans at December 31, 2006 and 2005 were mostly marketable equity and fixed income securities.

Postretirement Benefits

We sponsor defined benefit postretirement health care and life insurance plans that cover the majority of our employees. Generally, we calculate the benefits under these plans based on age, years of service, and pension benefit levels or final base pay. We do not fund these plans. For nearly all of the health care plans, retirees make contributions to cover a portion of the plan.

costs. For the life insurance plan, retirees do not make contributions to cover a portion of the plan costs.

Effective in 2002, we amended our postretirement medical plans for all subsidiaries other than Nine Mile Point. Our contributions for retiree medical coverage for future retirees who were under the age of 55 on January 1, 2002 are capped at the 2002 level. We also amended our plans to increase the Medicare eligible retirees' share of medical costs.

In 2003, the President signed into law the Medicare Prescription Drug Improvement and Modernization Act of 2003 (the Act). This legislation provides a prescription drug benefit for Medicare beneficiaries, a benefit that we provide to our Medicare eligible retirees. Our actuaries concluded that prescription drug benefits available under our postretirement medical plan are actuarially equivalent to Medicare Part D and thus qualify for the subsidy under the Act. In 2005, the Center for Medicare and Medicaid Services accepted our application to receive a tax reimbursement for eligible prescription drug costs, and we began to receive the subsidy in 2006. The actual subsidy offsets a portion of our share of the cost of the underlying postretirement prescription drug coverage. This legislation reduced our Accumulated Postretirement Benefit Obligation by \$42.6 million at January 1, 2005 and our annual postretirement benefit expense in 2005 by \$5.4 million. This subsidy reduced our 2006 cash medical costs by \$1.8 million, or by 7%.

Pension Liability Adjustments

Our pension accumulated benefit obligation has exceeded the fair value of our plan assets since 2001. At December 31, 2006 and 2005, our pension obligations were greater than the fair value of our plan assets for our qualified and our nonqualified pension plans as follows:

<i>At December 31, 2006</i>	Qualified Plans		Non-Qualified Plans	Total
	Nine Mile	Other (In millions)		
Accumulated benefit obligation	\$ 107.5
