SOUTHSIDE BANCSHARES INC Form 10-Q/A April 30, 2012

UNITED STATES

SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

FORM 10-Q/A Amendment No. 1

(Mark One)

x QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the quarterly period ended June 30, 2011

OR

o TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from ______ to _____

Commission file number 0-12247

SOUTHSIDE BANCSHARES, INC.

(Exact name of registrant as specified in its charter)

TEXAS (State or other jurisdiction of incorporation or

75-1848732

(I.R.S. Employer Identification No.)

1201 S. Beckham, Tyler, Texas (Address of principal executive offices)

organization)

75701 (Zip Code)

903-531-7111

(Registrant's telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes x No o

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes x No o

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer o

Non-accelerated filer o

Smaller reporting company o

(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes

o No x

The number of shares of the issuer's common stock, par value \$1.25, outstanding as of July 31, 2011 was 16,450,207 shares.

Explanatory Note

This Amendment No. 1 on Form 10-Q/A amends the Quarterly Report on Form 10-Q for the period ended June 30, 2011, which was originally filed with the Securities and Exchange Commission (the "SEC") on August 8, 2011 (the "Original Filing"). This amendment is being filed to reflect the restatement of i) the quarterly results of Southside Bancshares, Inc. (the "Company"), as discussed in Note 2 to the unaudited consolidated financial statements contained herein, and ii) other information related to such restated financial information. Except for Items 1, 2 and 4 of Part I and Item 6 of Part II, no other information included in the Original Filing is amended by this Form 10-Q/A.

During the preparation of the Form 10-K for the year ended December 31, 2011 (the "2011 Form 10-K"), the Company determined that in periods prior to December 31, 2011, it incorrectly accounted for securities acquired with a significant purchase premium that included an embedded derivative. These securities were mainly acquired in 2010 and 2011. Pursuant to GAAP, the Company is required to bifurcate and account for the embedded derivative separately or to account for the securities including the embedded derivative at fair value through income, if the bifurcation was impractical. The Company determined that valuing the embedded derivative separately was not readily identifiable and measurable and as such, cannot be bifurcated. Therefore, the Company determined that all securities meeting the above criteria should be reflected at fair value with the change in fair value reflected through income.

In addition, the Company determined that during the first three quarters of 2011, it incorrectly priced securities acquired with a significant premium and did not account for the impairment of FHLB advance option fees that became impaired during the third quarter of 2011.

The Company evaluated the effect of these three errors and concluded that they were immaterial to any of the previously issued consolidated financial statements except for the unaudited consolidated financial statements included in the Company's Quarterly Reports on Form 10-Q for the periods ended March 31, June 30, and September 30, 2011. Accordingly, on March 8, 2012, the Company filed a Form 8-K reporting that the Audit Committee of the Board of Directors of the Company determined based on the recommendation of management, that the Company should restate its unaudited consolidated financial statements in each of these Quarterly Reports on Form 10-Q. In addition, the Company revised its 2010 consolidated financial statements in the 2011 Form 10-K to correct for these errors.

See Note 2 – Restatement to Previously Issued Financial Statements contained in the Notes to Financial Statements included in this Form 10-Q/A which further describes the effect of this restatement.

Pursuant to Rule 12b-15 of the Securities Exchange Act of 1934, as amended, this Form 10-Q/A includes new certifications by our principal executive officer and principal financial officer under Sections 302 and 906 of the Sarbanes-Oxley Act of 2002. Except for the items noted above, no other information included in the Original Filing is being amended by this Form 10-Q/A. This Form 10-Q/A continues to speak as of the date of the Original Filing and we have not updated the filing to reflect events occurring subsequent to the date of the Original Filing other than those associated with the restatement of the Company's financial statements. Accordingly, this Form 10-Q/A should be read in conjunction with the Company's filings with the SEC subsequent to the Original Filing, including any amendments to those filings.

SOUTHSIDE BANCSHARES, INC. AND SUBSIDIARIES NOTES TO FINANCIAL STATEMENTS

1. Basis of Presentation

In this report, the words "the Company," "we," "us," and "our" refer to the combined entities of Southside Bancshares, Inc. and its subsidiaries. The words "Southside" and "Southside Bancshares" refer to Southside Bancshares, Inc. The words "Southside Bank" and "the Bank" refer to Southside Bank (which, subsequent to the internal merger of Fort Worth National Bank ("FWNB") with and into Southside Bank, includes FWNB). "FWBS" refers to Fort Worth Bancshares, Inc., a bank holding company acquired by Southside of which FWNB was a wholly-owned subsidiary. "SFG" refers to Southside Financial Group, LLC, of which Southside Bank owned a 50% interest as of June 30, 2011 and consolidates for financial reporting. On July 15, 2011, Southside Bank acquired the remaining 50% interest in SFG.

The consolidated balance sheet as of June 30, 2011, and the related consolidated statements of income, equity and cash flows and notes to the financial statements for the three and six month periods ended June 30, 2011 and 2010 are unaudited; in the opinion of management, all adjustments necessary for a fair statement of such financial statements have been included. Such adjustments consisted only of normal recurring items. All significant intercompany accounts and transactions are eliminated in consolidation. The preparation of these consolidated financial statements in conformity with U.S. generally accepted accounting principles ("GAAP") requires the use of management's estimates. These estimates are subjective in nature and involve matters of judgment. Actual amounts could differ from these estimates.

Interim results are not necessarily indicative of results for a full year. These financial statements should be read in conjunction with the financial statements and notes thereto in our Annual Report on Form 10-K for the year ended December 31, 2010. All share data has been adjusted to give retroactive recognition to stock splits and stock dividends.

Summary of Significant Accounting and Reporting Policies

Securities Carried at Fair Value through Income. Debt securities purchased at significant premiums that contain an embedded derivative where the embedded derivative is not readily identifiable and measurable and as such cannot be bifurcated, are classified as securities carried at fair value through income. Fair value is determined using quoted market prices. If quoted market prices are not available, fair values are based on quoted market prices for similar securities or estimates from independent pricing services. Changes in fair value are reported through the income statement as fair value gain (loss) – securities.

FHLB Advance Option Fees. Option fees paid to the FHLB giving us the option to enter into long-term advance commitments at specified interest rates in the future are capitalized and reviewed for impairment. Once the option is exercised, the FHLB advance option fee is amortized over the term of the advance as interest expense.

For a description of our other significant accounting and reporting policies, refer to Note 1 of the Notes to Financial Statements in our Annual Report on Form 10-K for the year ended December 31, 2010.

Accounting Standards

ASU No. 2010-06, "Fair Value Measurements and Disclosures (Topic 820) - Improving Disclosures About Fair Value Measurements." ASU 2010-06 requires expanded disclosures related to fair value measurements including (i) the amounts of significant transfers of assets or liabilities between Levels 1 and 2 of the fair value hierarchy and the reasons for the transfers, (ii) the reasons for transfers of assets or liabilities in or out of Level 3 of the fair value

hierarchy, with significant transfers disclosed separately, (iii) the policy for determining when transfers between levels of the fair value hierarchy are recognized and (iv) for recurring fair value measurements of assets and liabilities in Level 3 of the fair value hierarchy, a gross presentation of information about purchases, sales, issuances and settlements. ASU 2010-06 further clarifies that (i) fair value measurement disclosures should be provided for each class of assets and liabilities (rather than major category), which would generally be a subset of assets or liabilities within a line item in the statement of financial position and (ii) company should provide disclosures about the valuation techniques and inputs used to measure fair value for both recurring and nonrecurring fair value measurements for each class of assets and liabilities included in Levels 2 and 3 of the fair value hierarchy. The disclosures related to the gross presentation of purchases, sales, issuances and settlements of assets and liabilities included in Level 3 of the fair value hierarchy became effective for us on January 1, 2011. The remaining disclosure requirements and clarifications made by ASU 2010-06 became effective for us on January 1, 2010. See Note 10 – Fair Value Measurement.

Table of Contents

ASU No. 2010-20, "Receivables (Topic 310) - Disclosures about the Credit Quality of Financing Receivables and the Allowance for Credit Losses." ASU 2010-20 requires entities to provide disclosures designed to facilitate financial statement users' evaluation of (i) the nature of credit risk inherent in the entity's portfolio of financing receivables, (ii) how that risk is analyzed and assessed in arriving at the allowance for credit losses and (iii) the changes and reasons for those changes in the allowance for credit losses. Disclosures must be disaggregated by portfolio segment, the level at which an entity develops and documents a systematic method for determining its allowance for credit losses, and class of financing receivable, which is generally a disaggregation of portfolio segment. The required disclosures include, among other things, a roll forward of the allowance for credit losses as well as information about modified, impaired, nonaccrual and past due loans and credit quality indicators. ASU 2010-20 became effective for our financial statements as of December 31, 2010, as it relates to disclosures required as of the end of a reporting period. Disclosures that relate to activity during a reporting period became effective for our financial statements that include periods on or after January 1, 2011.

ASU No. 2011-01, "Deferral of the Effective Date of Disclosures about Troubled Debt Restructurings in Update No. 2010-20 (Topic 310)", was issued January 2011 deferring the new disclosure requirements (paragraphs 310-10-50-31 through 50-34 of the FASB Accounting Standards Codification) about troubled debt restructurings to be concurrent with the effective date of the guidance for determining what constitutes a troubled debt restructuring, as presented in proposed Accounting Standards Update, Receivables (Topic 310): Clarifications to Accounting for Troubled Debt Restructurings by Creditors. As a result of the issuance of Update 2011-02, the provisions of Update 2011-01 are effective for the first interim or annual period beginning on or after June 15, 2011 or September 30, 2011, and should be applied retrospectively to the beginning of the annual period of adoption. We do not expect the adoption of the Update to have a material effect on our financial statements at the date of adoption.

ASU No. 2011-02, "Receivables (Topic 310) - A Creditor's Determination of Whether a Restructuring Is a Troubled Debt Restructuring." ASU 2011-02 clarifies which loan modifications constitute troubled debt restructurings and is intended to assist creditors in determining whether a modification of the terms of a receivable meets the criteria to be considered a troubled debt restructuring, both for purposes of recording an impairment loss and for disclosure of troubled debt restructurings. In evaluating whether a restructuring constitutes a troubled debt restructuring, a creditor must separately conclude, under the guidance clarified by ASU 2011-02, that both of the following exist: (a) the restructuring constitutes a concession; and (b) the debtor is experiencing financial difficulties. ASU 2011-02 will be effective on July 1, 2011, and applies retrospectively to restructurings occurring on or after January 1, 2011. Adoption of ASU 2011-02 is not expected to have a significant impact on our financial statements.

ASU No. 2011-03, "Transfers and Servicing (Topic 860) - Reconsideration of Effective Control for Repurchase Agreements." ASU 2011-03 is intended to improve financial reporting of repurchase agreements and other agreements that both entitle and obligate a transferor to repurchase or redeem financial assets before their maturity. ASU 2011-03 removes from the assessment of effective control (i) the criterion requiring the transferor to have the ability to repurchase or redeem the financial assets on substantially the agreed terms, even in the event of default by the transferee, and (ii) the collateral maintenance guidance related to that criterion. ASU 2011-03 will be effective for us on January 1, 2012 and is not expected to have a significant impact on our consolidated financial statements.

ASU 2011-04, "Fair Value Measurement (Topic 820) - Amendments to Achieve Common Fair Value Measurements and Disclosure Requirements in U.S. GAAP and IFRSs." ASU 2011-04 amends Topic 820, "Fair Value Measurements and Disclosures," to converge the fair value measurement guidance in U.S. generally accepted accounting principles and International Financial Reporting Standards. ASU 2011-04 clarifies the application of existing fair value measurement requirements, changes certain principles in Topic 820 and requires additional fair value disclosures. ASU 2011-04 is effective for annual periods beginning after December 15, 2011, and is not expected to have a significant impact on our consolidated financial statements.

ASU 2011-05, "Comprehensive Income (Topic 220) - Presentation of Comprehensive Income." ASU 2011-05 amends Topic 220, "Comprehensive Income," to require that all nonowner changes in stockholders' equity be presented in either a single continuous statement of comprehensive income or in two separate but consecutive statements. Additionally, ASU 2011-05 requires entities to present, on the face of the financial statements, reclassification adjustments for items that are reclassified from other comprehensive income to net income in the statement or statements where the components of net income and the components of other comprehensive income are presented. The option to present components of other comprehensive income as part of the statement of changes in stockholders' equity was eliminated. ASU 2011-05 is effective for annual periods beginning after December 15, 2011, and is not expected to have a significant impact on our consolidated financial statements.

Table of Contents

2. Restatement of Previously Issued Financial Statements

During the preparation of the 2011 Form 10-K, we determined that in periods prior to December 31, 2011, we incorrectly accounted for securities acquired with a significant purchase premium that included an embedded derivative. These securities were mainly acquired in 2010 and 2011. Pursuant to GAAP, we are required to bifurcate and account for the embedded derivative separately or to account for the securities including the embedded derivative at fair value through income, if the bifurcation was impractical. We determined that valuing the embedded derivative separately was not readily identifiable and measurable and as such, cannot be bifurcated. Therefore, we determined that all securities meeting the above criteria should be reflected at fair value with the change in fair value reflected through income.

In addition to the error related to the accounting for securities with an embedded derivative mentioned above, we determined that during the first two quarters of 2011, we incorrectly priced securities acquired with a significant premium.

We evaluated the effect of these errors and concluded that they were immaterial to any of the previously issued consolidated financial statements except for the unaudited consolidated financial statements included in the Company's Quarterly Reports on Form 10-Q for the periods ended March 31, June 30, and September 30, 2011. Accordingly, on March 8, 2012, we filed a Form 8-K reporting that our Audit Committee of the Board of Directors determined based on the recommendation of management, that we should restate our unaudited consolidated financial statements in each of these Quarterly Reports on Form 10-Q. In addition, we revised our 2010 consolidated financial statements in the 2011 Form 10-K to correct for these errors.

The aggregate income resulting from the changes in the fair value of certain securities for the first two quarters of 2011 was approximately \$4.1 million, which should have been recorded between the first two quarterly periods of 2011.

The correction of the errors resulted in an increase in net income of \$1.6 million for the three months ended June 30, 2011 resulting in net income attributable to Southside Bancshares, Inc. of \$12.6 million for that period, and an increase in net income of approximately \$2.7 million for the six months ended June 30, 2011, resulting in net income attributable to Southside Bancshares, Inc. of \$21.0 million for that period.

Table of Contents

A summary of the adjustments made and their effect on the financial statements is presented below (dollars in thousands):

	As of June 30, 2011				
Consolidated Balance Sheet	As Originally Reported	Corrections	As Restated		
Mortgage-backed and related securities:					
Available for sale, at estimated fair value (1)	\$1,136,961	\$(353,373)	\$783,588		
Securities carried at fair value through income (1)	_	367,140	367,140		
Held to maturity, at amortized cost (1)	395,728	(10,507)	385,221

[&]quot;As Originally Reported" reflects balances reported in the June 30, 2011 Form 10-Q filed on August 8, 2011.

Balance Sheet Corrections:

- (1) The decrease in mortgage-backed securities available for sale and held to maturity for the six months ended June 30, 2011 reflects the reclassification of securities with an embedded derivative and purchased at a significant premium, which we have defined as greater than 111.111%, to securities carried at fair value through income.
 - (2) The correction to the deferred tax liability occurred as a result of recording the fair value on the securities through income rather than accumulated other comprehensive income. In addition, the deferred tax liability changed as a result of the deferral of tax deductibility of the fair value gains on securities carried at fair value through income.
- (3) Retained earnings increased due to the increase in fair value gains on securities carried at fair value through income for the six months ended June 30, 2011.
- (4) Accumulated other comprehensive income increased as a result of reversing the incorrect fair values on the securities previously classified as available for sale at June 30, 2011.

[&]quot;As Restated" reflects the final restated balances.

[&]quot;Corrections" reflect changes to the originally reported balances and are described below.

When it is determined that a decline in fair value of Held to Maturity ("HTM") and Available for Sale ("AFS") securities is other-than-temporary, the carrying value of the security is reduced to its estimated fair value, with a corresponding charge to earnings for the credit portion and the noncredit portion to other comprehensive income. In estimating other-than-temporary impairment losses, management considers, among other things, the length of time and the extent to which the fair value has been less than cost and the financial condition and near-term prospects of the issuer. Additionally, we do not currently intend to sell the securities and it is not more likely than not that we will be required to sell the security before the anticipated recovery of its amortized cost basis.

Table of Contents

The turmoil in the capital markets had a significant impact on our estimate of fair value for certain of our securities. We believe the market values are reflective of illiquidity and credit impairment. At June 30, 2011, we have in AFS Other Stocks and Bonds, \$2.9 million amortized cost basis in pooled trust preferred securities ("TRUPs"). Those securities are structured products with cash flows dependent upon securities issued by U.S. financial institutions, including banks and insurance companies. Our estimate of fair value at June 30, 2011 for the TRUPs is approximately \$957,000 and reflects the market illiquidity. With the exception of the TRUPs, to the best of management's knowledge and based on our consideration of the qualitative factors associated with each security, there were no securities in our investment and mortgage-backed securities portfolio at June 30, 2011 with an other-than-temporary impairment.

Given the facts and circumstances associated with the TRUPs we performed detailed cash flow modeling for each TRUP using an industry-accepted cash flow model. Prior to loading the required assumptions into the model we reviewed the financial condition of each of the underlying issuing banks within the TRUP collateral pool that had not deferred or defaulted as of June 30, 2011. Management's best estimate of a deferral assumption was assigned to each issuing bank based on the category in which it fell. Our analysis of the underlying cash flows contemplated various default, deferral and recovery scenarios to arrive at our best estimate of cash flows. Based on that detailed analysis, we have concluded that the other-than-temporary impairment, which captures the credit component in compliance with FASB ASC Topic 320, "Investments – Debt and Equity Securities," was estimated at \$3.1 million at both June 30, 2011 and December 31, 2010. The noncredit charge to other comprehensive income was estimated at \$2.0 million and \$2.7 million at June 30, 2011 and December 31, 2010, respectively. The carrying amount of the TRUPs was written down with \$75,000 and \$3.0 million recognized in earnings for the six months ended June 30, 2010 and for the year ended December 31, 2009, respectively. There was no additional write-down of the TRUPs recognized in earnings for the six months ended June 30, 2011. The cash flow model assumptions represent management's best estimate and consider a variety of qualitative factors, which include, among others, the credit rating downgrades, the severity and duration of the mark-to-market loss, and the structural nuances of each TRUP. Management believes that the detailed review of the collateral and cash flow modeling support the conclusion that the TRUPs had an other-than-temporary impairment at June 30, 2011. We will continue to update our assumptions and the resulting analysis each reporting period to reflect changing market conditions. Additionally, we do not currently intend to sell the TRUPs and it is not more likely than not that we will be required to sell the TRUPs before the anticipated recovery of their amortized cost basis.

The table below provides more detail on the TRUPs at June 30, 2011 (in thousands).

TRUP	Par	Credit Loss	Amortized Cost	Fair Value	Tranche	Credit Rating
1	\$2,000	\$1,075	\$925	\$300	C1	Ca

There were no securities transferred from AFS to HTM during the six months ended June 30, 2011 or 2010. There were no sales from the HTM portfolio during the six months ended June 30, 2011 or 2010. There were \$387.2 million of securities classified as HTM for the six months ended June 30, 2011 compared to \$406.9 million of securities classified as HTM for the year ended December 31, 2010.

Of the \$5.5 million in net securities gains from the AFS portfolio for the six months ended June 30, 2011, there were \$5.6 million in realized gains and \$115,000 in realized losses. Of the \$15.0 million in net securities gains from the AFS portfolio for the six months ended June 30, 2010, there were \$17.2 million in realized gains and \$2.2 million in realized losses.

The amortized cost and fair value of securities at June 30, 2011 are presented below by contractual maturity. Expected maturities may differ from contractual maturities because issuers may have the right to call or prepay obligations. Mortgage-backed securities are presented in total by category due to the fact that mortgage-backed securities typically are issued with stated principal amounts, and the securities are backed by pools of mortgages that have loans with varying maturities. The characteristics of the underlying pool of mortgages, such as fixed-rate or adjustable-rate, as well as prepayment risk, are passed on to the certificate holder. The term of a mortgage-backed pass-through security thus approximates the term of the underlying mortgages and can vary significantly due to prepayments.

Table of Contents

Allowance for Loan Losses

The allowance for loan losses is based on the most current review of the loan portfolio and is validated by multiple processes. First, the bank utilizes historical data to establish general reserve amounts for each class of loans. While we track several years of data, we primarily review one year data because we found during the 1980's that longer periods would not respond quickly enough to market conditions. Second, our lenders have the primary responsibility for identifying problem loans and estimating necessary reserves based on customer financial stress and underlying collateral. These recommendations are reviewed by the Senior lender, the Special Assets department, and the Loan Review department and are signed off on by the President. Third, the Loan Review department does independent reviews of the portfolio on an annual basis. The Loan Review department follows a board-approved annual loan review scope. The loan review scope encompasses a number of metrics that takes into consideration the size of the loan, the type of credit extended, the seasoning of the loan and the performance of the loan. The loan review scope as it relates to size, focuses more on larger dollar loan relationships, typically, for example, aggregate debt of \$500,000 or greater. The Loan Review officer also tracks specific reserves for loans by type compared to general reserves to determine trends in comparative reserves as well as losses not reserved for prior to charge off to determine the efficiency of the specific reserve process.

At each review, a subjective analysis methodology is used to grade the respective loan. Categories of grading vary in severity from loans that do not appear to have a significant probability of loss at the time of review to loans that indicate a probability that the entire balance of the loan will be uncollectible. If full collection of the loan balance appears unlikely at the time of review, estimates of future expected cash flows or appraisals of the collateral securing the debt are used to allocate the necessary allowances. The internal loan review department maintains a list of all loans or loan relationships that are graded as having more than the normal degree of risk associated with them. In addition, a list of specifically reserved loans or loan relationships of \$50,000 or more is updated on a quarterly basis in order to properly allocate necessary allowances and keep management informed on the status of attempts to correct the deficiencies noted with respect to the loan.

For loans to individuals the methodology associated with determining the appropriate allowance for losses on loans primarily consists of an evaluation of individual payment histories, remaining term to maturity and underlying collateral support.

Industry experience indicates that a portion of our loans will become delinquent and a portion of the loans will require partial or entire charge-off. Regardless of the underwriting criteria utilized, losses may be experienced as a result of various factors beyond our control, including, among other things, changes in market conditions affecting the value of properties used as collateral for loans and problems affecting the credit of the borrower and the ability of the borrower to make payments on the loan. Our determination of the adequacy of allowance for loan losses is based on various considerations, including an analysis of the risk characteristics of various classifications of loans, previous loan loss experience, specific loans which would have loan loss potential, delinquency trends, estimated fair value of the underlying collateral, current economic conditions, the views of the bank regulators (who have the authority to require additional allowances), and geographic and industry loan concentration.

Consumer loans at SFG are reserved for based on general estimates of loss at the time of purchase for current loans. SFG loans experiencing past due status or extension of maturity characteristics are reserved for at significantly higher levels based on the circumstances associated with each specific loan. In general the reserves for SFG are calculated based on the past due status of the loan. For reserve purposes, the portfolio has been segregated by past due status and by the remaining term variance from the original contract. During repayment, loans that pay late will take longer to pay out than the original contract. Additionally, some loans may be granted extensions for extenuating payment circumstances. The remaining term extensions increase the risk of collateral deterioration and accordingly, reserves are increased to recognize this risk.

For SFG automobile loan pools purchased after August 1, 2010, additional reserve methods have been added. New pools purchased are reserved at their estimated annual loss. Thereafter, the reserve is adjusted based on the actual performance versus projected performance. Additionally, during the fourth quarter of 2010, data mining measures were further enhanced to track migration within risk tranches. Reserves are adjusted quarterly to match the migration metrics.

Credit Quality Indicators

We categorize loans into risk categories based on relevant information about the ability of borrowers to service their debt such as: current financial information, historical payment experience, credit documentation, public information, and current economic trends, among other factors. We use the following definitions for risk ratings:

• Satisfactory (Rating 1 – 4) – This rating is assigned to all satisfactory loans. This category, by definition, should consist of completely acceptable credit. Credit and collateral exceptions should not be present, although their presence would not necessarily prohibit a loan from being rated Satisfactory, if deficiencies are in process of correction. These loans will not be included in the Watch List.

Table of Contents

- Satisfactory (Rating 5) Special Treatment Required (Pass Watch) These loans require some degree of special treatment, but not due to credit quality. This category does not include loans specially mentioned or adversely classified by the Loan Review Officer or regulatory authorities; however, particular attention must be accorded such credits due to characteristics such as:
 - A lack of, or abnormally extended payment program;
 - A heavy degree of concentration of collateral without sufficient margin;
 - A vulnerability to competition through lesser or extensive financial leverage;
- A dependence on a single, or few customers, or sources of supply and materials without suitable substitutes or alternatives.
- Special Mention (Rating 6) A Special Mention asset has potential weaknesses that deserve management's close attention. If left uncorrected, these potential weaknesses may result in deterioration of the repayment prospects for the asset or in the institution's credit position at some future date. Special Mention assets are not adversely classified and do not expose an institution to sufficient risk to warrant adverse classification.
- Substandard (Rating 7) Substandard loans are inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Loans so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the Bank will sustain some loss if the deficiencies are not corrected.
- Doubtful (Rating 8) Loans classified Doubtful have all the weaknesses inherent in those classified Substandard with the added characteristic that the weaknesses make collection or liquidation, in full, on the basis of currently known facts, conditions and values, highly questionable and improbable.
- •Loss (Rating 9) Loans classified Loss are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the loan has absolutely no recovery or salvage value but rather it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be affected in the future.

Loans not meeting risk ratings six through nine are reserved for as a group of similar type pass rated credits and included in the general portion of the allowance for loan losses.

The general portion of the loan loss allowance is reflective of historical charge-off levels for similar loans adjusted for changes in current conditions and other relevant factors. These factors are likely to cause estimated losses to differ from historical loss experience and include:

- Changes in lending policies or procedures, including underwriting, collection, charge-off, and recovery procedures;
 - Changes in local, regional and national economic and business conditions including entry into new markets;
 - Changes in the volume or type of credit extended;
 - Changes in the experience, ability, and depth of lending management;
 - Changes in the volume and severity of past due, nonaccrual, restructured, or classified loans;
 - Changes in loan review or Board oversight; and,
 - Changes in the level of concentrations of credit.

Repossessed assets	318	638
Total Nonperforming Assets	\$15,703	\$17,709

Nonaccrual and Past Due Loans

Nonaccrual loans are those loans which are 90 days or more delinquent and collection in full of both the principal and interest is in doubt. Additionally, some loans that are not delinquent may be placed on nonaccrual status due to doubts about full collection of principal or interest. When a loan is categorized as nonaccrual, the accrual of interest is discontinued and the accrued balance is reversed for financial statement purposes. Payments of contractual interest are recognized as income only to the extent that full recovery of the principal balance of the loan is reasonably certain. Loans are returned to accrual status when all the principal and interest amounts contractually due are brought current and future payments are reasonably assured. Other factors, such as the value of collateral securing the loan and the financial condition of the borrower must be considered in judgments as to potential loan loss.

Loans are considered impaired if, based on current information and events, it is probable that we will be unable to collect the scheduled payments of principal and interest when due according to the contractual terms of the loan agreement. The measurement of impaired loans is generally based on the present value of the expected future cash flows discounted at the historical effective interest rate stipulated in the loan agreement, except that all collateral-dependent loans are measured for impairment based on the fair value of the collateral. In measuring the fair value of the collateral, in addition to relying on third party appraisals, we use assumptions such as discount rates, and methodologies, such as comparison to the recent selling price of similar assets, consistent with those that would be utilized by unrelated third parties performing a valuation.

Nonaccrual loans and accruing loans past due more than 90 days include both smaller balance homogeneous loans that are collectively evaluated for impairment and individually classified impaired loans.

The following table sets forth the recorded investment in nonaccrual and accruing loans past due more than 90 days by class of loans for the periods presented (in thousands):

	June	June 30, 2011		per 31, 2010

Total	\$9,389	\$2,050	\$13,216	\$24,655	\$1,014,153	\$1,038,808

Impaired loans, primarily nonaccrual loans, were as follows (in thousands):

		December
	June 30,	31,
	2011	2010
Loans with no allocated allowance for loan losses	\$27	\$69
Loans with allocated allowance for loan losses	14,903	16,699
Total	\$14,930	\$16,768
Amount of the allowance for loan losses allocated	\$3,142	\$3,864

At any time a potential loss is recognized in the collection of principal, proper reserves should be allocated. Loans are charged off when deemed uncollectible. Loans are charged down as soon as collection by liquidation is evident to the liquidation value of the collateral net of liquidation costs, if any, and placed in nonaccrual status.

7. Long-term Obligations

Long-term obligations are summarized as follows (in thousands):

	June 30, 2011	December 31, 2010
FHLB Advances (1)	\$277,979	\$373,479
Long-term Debt (2)		
Southside Statutory Trust III Due 2033 (3)	20,619	20,619
Southside Statutory Trust IV Due 2037 (4)	23,196	23,196
Southside Statutory Trust V Due 2037 (5)	12,887	12,887
Magnolia Trust Company I Due 2035 (6)	3,609	3,609
Total Long-term Debt	60,311	60,311
Total Long-term Obligations	\$338,290	\$433,790

- (1) At June 30, 2011, the weighted average cost of these advances was 3.61%. FHLB Advances have maturities ranging from July 2012 through July 2028.
- (2) This long-term debt consists of trust preferred securities that qualify under the risk-based capital guidelines as Tier 1 capital, subject to certain limitations.
- (3) This debt carries an adjustable rate of 3.18575% through September 29, 2011 and adjusts quarterly at a rate equal to three-month LIBOR plus 294 basis points.
- (4) This debt carries a fixed rate of 6.518% through October 30, 2012 and thereafter, adjusts quarterly at a rate equal to three-month LIBOR plus 130 basis points.
- (5) This debt carries a fixed rate of 7.48% through December 15, 2012 and thereafter, adjusts quarterly at a rate equal to three-month LIBOR plus 225 basis points.
- (6) This debt carries an adjustable rate of 2.0585% through August 22, 2011 and thereafter, adjusts quarterly at a rate equal to three-month LIBOR plus 180 basis points.

Table of Contents

Beginning in September 2010 and continuing into the first quarter of 2011, we entered into the option to fund between one and a half and two years forward from the advance commitment date \$200 million par in long-term advance commitments from the FHLB at the rates on the date the option was purchased. The fee, included in other assets in our consolidated balance sheet, will be amortized over the term of the advance when we exercise the advance commitments. Should we determine the advance commitments will not be exercised, or they are impaired, the fee will be expensed in the period determination is made.

Below is a table detailing the optional advance commitment terms (dollars in thousands):

			Advance	
Advance	Option	Advance Commitment	Commitment	
Commitment	Expiration Date	Term at Exercise Date	Rate	Option Fee Paid
\$ 25,000	09/20/12	36 months	1.325%	\$ 1,105
25,000	09/20/12	48 months	1.674%	1,410
20,000	10/09/12	36 months	1.153%	789
20,000	10/09/12	48 months	1.466%	1,042
20,000	10/09/12	60 months	1.807%	1,216
20,000	05/17/12	48 months	1.710%	917
20,000	05/17/12	60 months	2.085%	1,102
20,000	03/18/13	60 months	2.510%	1,528
15,000	03/18/13	36 months	1.622%	828
15,000	03/18/13	48 months	2.086%	1,017
\$ 200,000				\$ 10,954

8. Employee Benefit Plans

The components of net periodic benefit cost are as follows (in thousands):

	Six Months Ended June 30,							
	Defined Benefit							
		Pension Plan				Restoration Plan		
		2011		2010		2011	2010	
Service cost	\$	768	\$	681	\$	87 \$	77	
Interest cost		1,490		1,416		198	192	
Expected return on assets		(1,941)		(1,826)		_	_	
Net loss recognition		581		503		151	145	
Prior service credit amortization		(21)		(21)		(1)	(1)	
Net periodic benefit cost	\$	877	\$	753	\$	435 \$	413	

	Three Months Ended June 30,							
	Defined Benefit							
		Pension Plan				Restoration Plan		
		2011		2010		2011	2010	
Service cost	\$	374	\$	342	\$	44 \$	48	
Interest cost		749		738		98	120	
Expected return on assets		(969)		(947)		_	_	
Net loss recognition		296		290		70	100	
Prior service credit amortization		(11)		(11)		_	_	
Net periodic benefit cost	\$	439	\$	412	\$	212 \$	268	

Employer Contributions. We previously disclosed in our financial statements for the year ended December 31, 2010, that we expected to contribute \$2.0 million to our defined benefit pension plan and \$80,000 to our restoration plan in 2011. As of June 30, 2011, we had contributed \$1.0 million to our defined benefit plan, and contributions of \$40,000 had been made to our restoration plan.

Table of Contents

9. Share-based Incentive Plans

2009 Incentive Plan (the "2009 Incentive Plan")

On April 16, 2009, our shareholders approved the Southside Bancshares, Inc. 2009 Incentive Plan (the "2009 Incentive Plan"), which is a stock-based incentive compensation plan. A total of 1,157,625 shares of our common stock were reserved and available for issuance pursuant to awards granted under the 2009 Incentive Plan. Under the 2009 Incentive Plan, we were authorized to grant nonqualified stock options ("NQSOs"), restricted stock units ("RSUs") or any combination thereof to certain officers. During the three months ended June 30, 2011, we granted RSUs and NQSOs pursuant to the 2009 Incentive Plan.

As of June 30, 2011, there were 204,202 nonvested awards outstanding. For the three and six months ended June 30, 2011, there was \$26,000 share-based compensation expense related to the 2009 Incentive Plan. As of June 30, 2010, there were no awards granted or nonvested. There was no share-based compensation expense for the three and six months ended June 30, 2010.

As of June 30, 2011, there was \$1.6 million of unrecognized compensation cost related to the 2009 Incentive Plan for the nonvested awards granted in June 2011. The cost is expected to be recognized over a weighted-average period of 3.49 years.

The fair value of each NQSO granted is estimated on the date of grant using the Black-Scholes method of option pricing with the following weighted-average assumptions for grants in 2011: dividend yield of 3.54%; risk-free interest rate of 2.30%; expected life of 6.5 and 7.0 years for the three-year and four-year vesting schedule, respectively; and expected volatility of 42.07% and 41.50% for the three-year and four-year vesting schedule, respectively.

The NQSOs which have contractual terms of 10 years and vest in equal annual installments over either a three- or four-year period.

The fair value of each RSU is the ending stock price on the date of grant. The RSUs vest in equal annual installments over either a three- or four-year period.

Each award is evidenced by an award agreement that specifies the option price, if applicable, the duration of the award, the number of shares to which the award pertains, and such other provisions as the Board determines.

1993 Incentive Stock Option Plan ("the ISO Plan")

In April 1993, we adopted the Southside Bancshares, Inc. 1993 Incentive Stock Option Plan ("the ISO Plan"), a stock-based incentive compensation plan. The ISO Plan expired March 31, 2003.

As of June 30, 2011 and 2010, there were no nonvested shares for the ISO Plan. For the six months ended June 30, 2011 and 2010, there was no stock-based compensation expense related to the ISO Plan.

As of June 30, 2011 and 2010, there was no unrecognized compensation cost related to the ISO Plan for nonvested options granted in March 2003.

The fair value of each stock option granted is estimated on the date of grant using the Black-Scholes method of option pricing with the following weighted-average assumptions for grants in 2003: dividend yield of 1.93%; risk-free interest rate of 4.93%; expected life of six years; and expected volatility of 28.90%.

Under the ISO Plan, we were authorized to issue shares of common stock pursuant to "Awards" granted in the form of incentive stock options (intended to qualify under Section 422 of the Internal Revenue Code of 1986, as amended). Before the ISO Plan expired, awards were granted to selected employees and directors. No stock options have been available for grant under the ISO Plan since its expiration in March 2003.

The ISO Plan provided that the exercise price of any stock option not be less than the fair market value of the common stock on the date of grant. The outstanding stock options have contractual terms of 10 years. All options vest on a graded schedule, 20% per year for five years, beginning on the first anniversary date of the grant date.

Table of Contents

A combined summary of activity in our share-based plans as of June 30, 2011 is presented below:

		Restricted	Stock Units	Stock	Opt	ions
		Outs	tanding	Outs	stand	ing
			Weighted-		V	Veighted-
	Shares		Average			Average
	Available	Number	Grant-Date	Number		Exercise
	for Grant	of Shares	Fair Value	of Shares		Price
Balance, January 2011	1,157,625	_	\$	- 10,825	\$	10.38
Granted	(204,202)	33,392	19.19	170,810		19.19

Balance, June 30, 2011	953,423	33,392	\$ 19.19	180,797	\$	18.70

Other information regarding options outstanding and exercisable as of June 30, 2011 is as follows:

			Options Ou	Options	s Exer	cisable	
				Weighted-			
			Weighted-	Average			Weighted-
			Average Remaining				Average
Rar	ige of Exercise	Number	Exercise	Contractual	Number		Exercise
	Prices	of Shares	Price	Life in Years	of Shares		Price
\$	10.38 - 10.38	9,987 \$	10.38	1.75	9,987	\$	10.38
	19.19 -19.19	170,810	19.19	9.94	_		_
Total		180,797 \$	18.70	9.49	9,987	\$	10.38

The total intrinsic value (i.e., the amount by which the fair value of the underlying common stock exceeds the exercise price of a stock option on exercise date) of outstanding stock options and exercisable stock options was \$207,000 and \$95,000 at June 30, 2011, respectively.

The total intrinsic value of stock options exercised during the six months ended June 30, 2011 and 2010 was \$7,000 and \$1.3 million, respectively.

Cash received from stock option exercises for the six months ended June 30, 2011 and 2010 was \$9,000 and \$356,000, respectively. The tax benefit realized for the deductions related to the stock option exercises was \$2,000 and \$316,000 for the six months ended June 30, 2011 and 2010, respectively.

10. Fair Value Measurement - (2011 Restated)

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants. A fair value measurement assumes that the transaction to sell the asset or transfer the liability occurs in the principal market for the asset or liability or, in the absence of a principal market, the most advantageous market for the asset or liability. The price in the principal (or most advantageous) market used to measure the fair value of the asset or liability shall not be adjusted for transaction costs. An orderly transaction is a transaction that assumes exposure to the market for a period prior to the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets and liabilities; it is not a forced transaction. Market participants are buyers and sellers in the principal market that are (i) independent,

(ii) knowledgeable, (iii) able to transact and (iv) willing to transact.

Table of Contents

Valuation techniques including the market approach, the income approach and/or the cost approach are utilized to determine fair value. Inputs to valuation techniques refer to the assumptions that market participants would use in pricing the asset or liability. An entity must consider all aspects of nonperforming risk, including the entity's own credit standing when measuring fair value of a liability. Inputs may be observable, meaning those that reflect the assumptions market participants would use in pricing the asset or liability developed based on market data obtained from independent sources, or unobservable, meaning those that reflect the reporting entity's own assumptions about the assumptions market participants would use in pricing the asset or liability developed based on the best information available in the circumstances. A fair value hierarchy for valuation inputs gives the highest priority to quoted prices in active markets for identical assets or liabilities and the lowest priority to unobservable inputs. The fair value hierarchy is as follows:

Level 1 Inputs - Unadjusted quoted prices in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date.

Level 2 Inputs - Inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly or indirectly. These might include quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the asset or liability (such as interest rates, volatilities, prepayment speeds, credit risks, etc.) or inputs that are derived principally from or corroborated by market data by correlation or other means.

Level 3 Inputs - Unobservable inputs for determining the fair values of assets or liabilities that reflect an entity's own assumptions about the assumptions that market participants would use in pricing the assets or liabilities.

A description of the valuation methodologies used for assets and liabilities measured at fair value, as well as the general classification of such instruments pursuant to the valuation hierarchy, is set forth below.

Securities Available for Sale – U.S. Treasury securities are reported at fair value utilizing Level 1 inputs. Other securities classified as available for sale are reported at fair value utilizing Level 2 inputs. For these securities, we obtain fair value measurements from an independent pricing service. The fair value measurements consider observable data that may include dealer quotes, market spreads, cash flows, the U.S. Treasury yield curve, live trading levels, trade execution data, market consensus prepayment speeds, credit information and the bond's terms and conditions, among other things.

Securities Carried at Fair Value through Income – U.S. Treasury securities are reported at fair value utilizing Level 1 inputs. Other securities classified as available for sale are reported at fair value utilizing Level 2 inputs. For these securities, we obtain fair value measurements from an independent pricing service. The fair value measurements consider observable data that may include dealer quotes, market spreads, cash flows, the U.S. Treasury yield curve, live trading levels, trade execution data, market consensus prepayment speeds, credit information and the bond's terms and conditions, among other things.

We review the prices supplied by the independent pricing service, as well as their underlying pricing methodologies and their Statement on Standards for Attestation Engagements – Reporting on Controls of a Service Organization ("SSAE 16") for reasonableness and to ensure such prices are aligned with traditional pricing matrices. We validate prices supplied by the independent pricing service by comparison to prices obtained from, in most cases, three additional third party sources. For securities where prices are outside a reasonable range, we further review those securities to determine what a reasonable price estimate is for that security, given available data.

Certain financial assets are measured at fair value in accordance with GAAP. Adjustments to the fair value of these assets usually result from the application of fair value accounting or write-downs of individual assets. Transfers

between levels of the fair value hierarchy are recognized on the actual date of the event or circumstances that caused the transfer, which generally coincides with our monthly and/or quarterly valuation process. There were no transfers between Level 1 and Level 2 during the six months ended June 30, 2011.

Loans Held for Sale - These loans are reported at the lower of cost or fair value. Fair value is determined based on expected proceeds, which are based on sales contracts and commitments and are considered Level 2 inputs. At June 30, 2011, based on our estimates of fair value, no valuation allowance was recognized.

Impaired Loans – Certain impaired loans may be reported at the fair value of the underlying collateral if repayment is expected solely from the collateral. Collateral values are estimated using Level 3 inputs based on customized discounting criteria or appraisals. At June 30, 2011, the impact of loans with specific reserves based on the fair value of the collateral was reflected in our allowance for loans losses.

Table of Contents

The following table summarizes impaired loans measured at fair value through a specific valuation allowance allocation of the allowance for possible loan losses based upon fair value of the underlying collateral utilizing Level 3 valuation inputs as follows (in thousands):

		At December		
	At June 30,	31,	At June 30,	
	2011	2010	2010	
Carrying Value	\$14,930	\$ 16,768	\$18,354	
Valuation Allowance	3,142	3,864	3,675	
Total Reported Fair Value	\$11,788	\$ 12,904	\$14,679	

Certain nonfinancial assets and nonfinancial liabilities measured at fair value on a recurring basis include reporting units measured at fair value in the first step of a goodwill impairment test. Certain nonfinancial assets measured at fair value on a nonrecurring basis include nonfinancial assets and nonfinancial liabilities measured at fair value in the second step of a goodwill impairment test, as well as intangible assets and other nonfinancial long-lived assets (such as real estate owned) that are measured at fair value in the event of an impairment.

The following tables summarize financial assets and financial liabilities measured at fair value on a recurring basis as of June 30, 2011 and December 31, 2010, segregated by the level of the valuation inputs within the fair value hierarchy utilized to measure fair value (in thousands):

The amount of total gains or losses for the periods included in earnings (or changes in net assets) attributable to the change in unrealized gains or losses relating to assets still held at reporting date

We reported at fair value through income certain of our mortgage-backed securities with embedded derivatives and purchased at a significant premium, which we defined as greater than 111.111% as opposed to bifurcating the embedded derivative and valuing it on a stand alone basis as these embedded derivatives are not readily identifiable and measurable and as such cannot be bifurcated. At June 30, 2011, we had \$367.1 million classified as securities carried at fair value through income. The changes in fair value recorded in income was an increase of \$2.5 million and \$4.1 million, respectively, for the three and six months ended June 30, 2011. At June 30, 2011, we had no securities classified as securities carried at fair value through income. We did not have any changes in fair value recorded in income during the three and six months ended June 30, 2010.

Table of Contents

Assets and liabilities accounted for at fair value through income are initially measured at fair value with subsequent changes in fair value recognized in earnings. Such changes in the fair value of assets for which we reported at fair value through income are included in current period earnings with classification in the income statement line item reflected in the following table (in thousands):

	Six Months Ended June 30,

Total	\$2,456	\$-

Disclosure of fair value information about financial instruments, whether or not recognized in the balance sheet is required, for which it is practicable to estimate that value. In cases where quoted market prices are not available, fair values are based on estimates using present value or other estimation techniques. Those techniques are significantly affected by the assumptions used, including the discount rate and estimates of future cash flows. Such techniques and assumptions, as they apply to individual categories of our financial instruments, are as follows:

Cash and cash equivalents - The carrying amounts for cash and cash equivalents is a reasonable estimate of those assets' fair value.

Investment and mortgage-backed and related securities - Fair values for these securities are based on quoted market prices, where available. If quoted market prices are not available, fair values are based on quoted market prices for similar securities or estimates from independent pricing services.

FHLB stock and other investments - The carrying amount of FHLB stock is a reasonable estimate of those assets' fair value.

Loans receivable - For adjustable rate loans that reprice frequently and with no significant change in credit risk, the carrying amounts are a reasonable estimate of those assets' fair value. The fair value of fixed rate loans is estimated by discounting the future cash flows using the current rates at which similar loans would be made to borrowers with similar credit ratings and for the same remaining maturities. Nonperforming loans are estimated using discounted cash flow analyses or the underlying value of the collateral where applicable.

Deposit liabilities - The fair value of demand deposits, savings accounts, and certain money market deposits is the amount on demand at the reporting date, that is, the carrying value. Fair values for fixed rate certificates of deposits are estimated using a discounted cash flow calculation that applies interest rates currently being offered for deposits of similar remaining maturities.

Federal funds purchased and repurchase agreements - Federal funds purchased and repurchase agreements generally have an original term to maturity of one day and thus are considered short-term borrowings. Consequently, their carrying value is a reasonable estimate of fair value.

FHLB advances - The fair value of these advances is estimated by discounting the future cash flows using rates at which advances would be made to borrowers with similar credit ratings and for the same remaining maturities.

Long-term debt - The carrying amount for the long-term debt is estimated by discounting future cash flows using estimated rates at which long-term debt would be made to borrowers with similar credit ratings and for the remaining maturities. This type of debt is not issued as frequently since the economic crisis beginning in 2007 and change to the capital rates issued in 2010. Therefore, the discount rate is a best estimate.

Table of Contents

The following table presents our financial assets, financial liabilities, and unrecognized financial instruments at both their respective carrying amounts and fair value (in thousands):

	At June 30, 2011 Carrying		At December 31, 2010 Carrying	
	Amount	Fair Value	Amount	Fair Value
Financial assets:				
Cash and cash equivalents	\$48,454	\$48,454	\$79,073	\$79,073
Investment securities:				
Available for sale, at estimated fair value	302,038	302,038	299,344	299,344
Held to maturity, at amortized cost	1,996	2,135	1,495	1,553
Mortgage-backed and related securities:				
Available for sale, at estimated fair value	783,588	783,588	886,574	886,574
Securities carried at fair value through income	367,140	367,140	72,176	72,176
Held to maturity, at amortized cost	385,221	400,770	405,367	413,865
FHLB stock and other investments, at cost	27,588	27,588	36,776	36,776
Loans, net of allowance for loan losses	1,019,399	1,023,990	1,057,209	1,066,125
Loans held for sale	2,738	2,738	6,583	6,583
Financial liabilities:				
Retail deposits	\$2,239,537	\$2,243,214	\$2,134,428	\$2,138,587
Federal funds purchased and repurchase agreements	3,077	3,077	3,844	3,844
FHLB advances	532,782	549,399	562,573	578,561
Long-term debt	60,311	45,918	60,311	50,673

As discussed earlier, the fair value estimate of financial instruments for which quoted market prices are unavailable is dependent upon the assumptions used. Consequently, those estimates cannot be substantiated by comparison to independent markets and, in many cases, could not be realized in immediate settlement of the instruments. Accordingly, the aggregate fair value amounts presented in the above fair value table do not necessarily represent their underlying value.

The estimated fair value of our commitments to extend credit, credit card arrangements and letters of credit, was not material at June 30, 2011 or December 31, 2010.

Table of Contents

11. Off-Balance-Sheet Arrangements, Commitments and Contingencies

Financial Instruments with Off-Balance-Sheet-Risk. In the normal course of business, we are a party to certain financial instruments, with off-balance-sheet risk, to meet the financing needs of our customers. These off-balance-sheet instruments include commitments to extend credit and standby letters of credit. These instruments involve, to varying degrees, elements of credit and interest rate risk in excess of the amount reflected in the financial statements. The contract or notional amounts of these instruments reflect the extent of involvement and exposure to credit loss that we have in these particular classes of financial instruments.

Commitments to extend credit are agreements to lend to a customer provided that the terms established in the contract are met. Commitments generally have fixed expiration dates and may require payment of fees. Since some commitments are expected to expire without being drawn upon, the total commitment amounts do not necessarily represent future cash requirements. Standby letters of credit are conditional commitments issued to guarantee the performance of a customer to a third party. These guarantees are primarily issued to support public and private borrowing arrangements. The credit risk involved in issuing letters of credit is essentially the same as that involved in extending loan commitments to customers.

We had outstanding unused commitments to extend credit of \$118.1 million and \$113.3 million at June 30, 2011 and December 31, 2010, respectively. Each commitment has a maturity date and the commitment expires on that date with the exception of credit card and ready reserve commitments, which have no stated maturity date. Unused commitments for credit card and ready reserve at June 30, 2011 and December 31, 2010 were \$11.6 million and \$11.5 million, respectively, and are reflected in the due after one year category. We had outstanding standby letters of credit of \$5.7 million and \$5.0 million at June 30, 2011 and December 31, 2010, respectively.

The scheduled maturities of unused commitments as of June 30, 2011 and December 31, 2010 were as follows (in thousands):

	June 30, 2011	December 31, 2010
Unused commitments:		
Due in one year or less	\$79,493	\$ 64,984
Due after one year	38,654	48,267
Total	\$118,147	\$ 113,251

We apply the same credit policies in making commitments and standby letters of credit as we do for on-balance-sheet instruments. We evaluate each customer's credit worthiness on a case-by-case basis. The amount of collateral obtained, if deemed necessary, upon extension of credit is based on management's credit evaluation of the borrower. Collateral held varies but may include cash or cash equivalents, negotiable instruments, real estate, accounts receivable, inventory, oil, gas and mineral interests, property, plant and equipment.

Lease Commitments. We lease certain branch facilities and office equipment under operating leases. It is expected that certain leases will be renewed, or equipment replaced with new leased equipment, as these leases expire.

Securities. In the normal course of business we buy and sell securities. There were \$9.1 million of unsettled trades to purchase securities at June 30, 2011. There were \$31.9 million of unsettled trades to sell securities at June 30, 2011. There were no unsettled trades to sell securities at December 31, 2010. There were \$145,000 of unsettled trades to purchase securities at December 31, 2010.

Deposits. There were no unsettled issuances of brokered CDs at June 30, 2011. There were \$5.0 million of unsettled issuances of brokered CDs at December 31, 2010.

Litigation. We are involved with various litigation in the normal course of business. Management, after consulting with our legal counsel, believes that any liability resulting from litigation will not have a material effect on the financial position and results of operations and our liquidity.

12. Subsequent Events

On July 15, 2011, we purchased the remaining 50% interest in SFG increasing our ownership to 100%. The purchase price was \$4.8 million. The purchase of the remaining 50% interest in SFG was a direct result of new regulations adopted as part of the Dodd–Frank Wall Street Reform and Consumer Protection Act ("Dodd Frank"). Dodd Frank changed the manner in which we can do business through a nonbank entity. Given the importance of our SFG operations, we determined that purchasing the remaining 50% interest in this company and integrating its operations into Southside Bank would be in the bank's best interest. In addition, SFG is already fully consolidated on our balance sheet and this purchase will not limit or change our ability to allocate capital in order to grow our franchise.

Table of Contents

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following is a discussion of the consolidated financial condition, changes in financial condition, and results of our operations, and should be read and reviewed in conjunction with the financial statements, and the notes thereto, in this Quarterly Report on Form 10-Q/A and in our Annual Report on Form 10-K for the year ended December 31, 2010.

We reported an increase in net income for the three and six months ended June 30, 2011 compared to the same periods in 2010. Net income attributable to Southside Bancshares, Inc. for the three and six months ended June 30, 2011 was \$12.6 million and \$21.0 million, respectively, compared to \$9.3 million and \$20.9 million, respectively, for the same periods in 2010.

As more fully described in Note 2 of the Notes to Financial Statements, certain financial statement components for the three and six months ended June 30, 2011 have been restated to reflect securities carried at fair value through income. Throughout this discussion we will footnote tables that have been restated for the three and six months ended June 30, 2011 to reflect the impact of this restatement and we have updated our discussion to discuss changes between periods when comparing the restated amounts.

Forward Looking Statements

Certain statements of other than historical fact that are contained in this document and in written material, press releases and oral statements issued by or on behalf of Southside Bancshares, Inc., a bank holding company, may be considered to be "forward-looking statements" within the meaning of and subject to the protections of the Private Securities Litigation Reform Act of 1995. These forward-looking statements are not guarantees of future performance, nor should they be relied upon as representing management's views as of any subsequent date. These statements may include words such as "expect," "estimate," "project," "anticipate," "appear," "believe," "could," "should," "may," "intend," "probability," "risk," "target," "objective," "plans," "potential," and similar expressions. Forward-looking statements are statements with respect to our beliefs, plans, expectations, objectives, goals, anticipations, assumptions, estimates, intentions and future performance, and are subject to significant known and unknown risks and uncertainties, which could cause our actual results to differ materially from the results discussed in the forward-looking statements. For example, discussions of the effect of our expansion, trends in asset quality and earnings from growth, and certain market risk disclosures are based upon information presently available to management and are dependent on choices about key model characteristics and assumptions and are subject to various limitations. By their nature, certain of the market risk disclosures are only estimates and could be materially different from what actually occurs in the future. As a result, actual income gains and losses could materially differ from those that have been estimated. Other factors that could cause actual results to differ materially from forward-looking statements include, but are not limited to, the following:

- general economic conditions, either globally, nationally, in the State of Texas, or in the specific markets in which we operate, including, without limitation, the deterioration of the commercial real estate, residential real estate, construction and development, credit and liquidity markets, which could cause an adverse change in our net interest margin, or a decline in the value of our assets, which could result in realized losses;
- •legislation, regulatory changes or changes in monetary or fiscal policy that adversely affect the businesses in which we are engaged, including the impact of the Dodd-Frank Act, the Federal Reserve's actions with respect to interest rates and other regulatory responses to current economic conditions;
- adverse changes in the status or financial stability or credit rating of the U.S. Treasury-issued securities impacting the U.S. Treasury's guarantees or ability to pay or issue debt;
- adverse changes in the status or financial condition of the Government-Sponsored Enterprises (the "GSEs") impacting the GSEs' guarantees or ability to pay or issue debt;

- adverse changes in the credit portfolio of other U.S. financial institutions relative to the performance of certain of our investment securities;
- economic or other disruptions caused by acts of terrorism in the United States, Europe or other areas;
- •changes in the interest rate yield curve such as flat, inverted or steep yield curves, or changes in the interest rate environment that impact interest margins and may impact prepayments on the mortgage-backed securities portfolio;
- increases in our nonperforming assets;
- our ability to maintain adequate liquidity to fund operations and growth;
- the failure of our assumptions underlying allowance for loan losses and other estimates;
- unexpected outcomes of, and the costs associated with, existing or new litigation involving us;
 - changes impacting our balance sheet and leverage strategy;
- our ability to monitor interest rate risk;
- significant increases in competition in the banking and financial services industry;
- changes in consumer spending, borrowing and saving habits;
- technological changes;

Table of Contents

- our ability to increase market share and control expenses;
- the effect of changes in federal or state tax laws;
- the effect of compliance with legislation or regulatory changes;
- the effect of changes in accounting policies and practices;
- •risks of mergers and acquisitions including the related time and cost of implementing transactions and the potential failure to achieve expected gains, revenue growth or expense savings;
- credit risks of borrowers, including any increase in those risks due to changing economic conditions; and
- •risks related to loans secured by real estate, including the risk that the value and marketability of collateral could decline.

All written or oral forward-looking statements made by us or attributable to us are expressly qualified by this cautionary notice. We disclaim any obligation to update any factors or to announce publicly the result of revisions to any of the forward-looking statements included herein to reflect future events or developments.

Impact of Dodd-Frank Act

On July 21, 2010, the Dodd-Frank Act was signed into law. The Dodd-Frank Act represents a significant overhaul of many aspects of the regulation of the financial services industry, although some of its provisions apply to companies that are significantly larger than us. The Dodd-Frank Act directs applicable regulatory authorities to promulgate regulations implementing its provisions, and its effect on us and on the financial services industry as a whole will be clarified as those regulations are issued. Major elements of the Dodd-Frank Act include:

- A permanent increase in deposit insurance coverage to \$250,000 per account, unlimited deposit insurance on noninterest bearing transaction accounts beginning December 31, 2010 through December 31, 2012, and an increase in the minimum Deposit Insurance Fund reserve requirement from 1.15% to 1.35%, with assessments to be based on assets as opposed to deposits.
- New disclosure and other requirements relating to executive compensation and corporate governance.
- Amendments to the Truth in Lending Act aimed at improving consumer protections with respect to mortgage originations, including originator compensation, minimum repayment standards, and prepayment considerations.
- The establishment of the Financial Stability Oversight Council, which will be responsible for identifying and monitoring systemic risks posed by financial firms, activities, and practices.
- The development of regulations to limit debit card interchange fees.
- The future elimination of newly issued trust preferred securities as a permitted element of Tier 1 capital.
- The creation of a special regime to allow for the orderly liquidation of systemically important financial companies, including the establishment of an orderly liquidation fund.
- •The development of regulations to address derivatives markets, including clearing and exchange trading requirements and a framework for regulating derivatives-market participants.
- Enhanced supervision of credit rating agencies through the Office of Credit Ratings within the SEC.
- Increased regulation of asset-backed securities, including a requirement that issuers of asset-backed securities retain at least 5% of the risk of the asset-backed securities.
- The establishment of a Bureau of Consumer Financial Protection, within the Federal Reserve, to serve as a dedicated consumer-protection regulatory body.

We continue to evaluate the potential impact of the Dodd-Frank Act on our business, financial condition and results of operations and expect that some provisions may have adverse effects on us, such as the cost of complying with the numerous new regulations and reporting requirements mandated by the Dodd-Frank Act.

Critical Accounting Estimates

Our accounting and reporting estimates conform with U.S. generally accepted accounting principles ("GAAP") and general practices within the financial services industry. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the amounts reported in the financial statements and accompanying notes. Actual results could differ from those estimates. We consider our critical accounting policies to include the following:

Allowance for Losses on Loans. The allowance for losses on loans represents our best estimate of probable losses inherent in the existing loan portfolio. The allowance for losses on loans is increased by the provision for losses on loans charged to expense and reduced by loans charged-off, net of recoveries. The provision for losses on loans is determined based on our assessment of several factors: reviews and evaluations of specific loans, changes in the nature and volume of the loan portfolio, current economic conditions and the related impact on specific borrowers and industry groups, historical loan loss experience, the level of classified and nonperforming loans and the results of regulatory examinations.

Table of Contents

The loan loss allowance is based on the most current review of the loan portfolio and is validated by multiple processes. The servicing officer has the primary responsibility for updating significant changes in a customer's financial position. Each officer prepares status updates on any credit deemed to be experiencing repayment difficulties which, in the officer's opinion, would place the collection of principal or interest in doubt. Our internal loan review department is responsible for an ongoing review of our loan portfolio with specific goals set for the loans to be reviewed on an annual basis.

At each review, a subjective analysis methodology is used to grade the respective loan. Categories of grading vary in severity from loans that do not appear to have a significant probability of loss at the time of review to loans that indicate a probability that the entire balance of the loan will be uncollectible. If full collection of the loan balance appears unlikely at the time of review, estimates of future expected cash flows or appraisals of the collateral securing the debt are used to allocate the necessary allowances. The internal loan review department maintains a list of all loans or loan relationships that are graded as having more than the normal degree of risk associated with them. In addition, a list of specifically reserved loans or loan relationships of \$50,000 or more is updated on a quarterly basis in order to properly allocate necessary allowance and keep management informed on the status of attempts to correct the deficiencies noted with respect to the loan.

Loans are considered impaired if, based on current information and events, it is probable that we will be unable to collect the scheduled payments of principal or interest when due according to the contractual terms of the loan agreement. The measurement of impaired loans is generally based on the present value of expected future cash flows discounted at the historical effective interest rate stipulated in the loan agreement, except that all collateral-dependent loans are measured for impairment based on the fair value of the collateral. In measuring the fair value of the collateral, in addition to relying on third party appraisals, we use assumptions such as discount rates, and methodologies, such as comparison to the recent selling price of similar assets, consistent with those that would be utilized by unrelated third parties performing a valuation.

Changes in the financial condition of individual borrowers, economic conditions, historical loss experience and the conditions of the various markets in which collateral may be sold all may affect the required level of the allowance for losses on loans and the associated provision for loan losses.

As of June 30, 2011, our review of the loan portfolio indicated that a loan loss allowance of \$19.4 million was adequate to cover probable losses in the portfolio.

Refer to "Part II - Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations - Loan Loss Experience and Allowance for Loan Losses" and "Note 6 – Loans and Allowance for Probable Loan Losses" of the Notes to Financial Statements in our Annual Report on Form 10-K for the year ended December 31, 2010 for a detailed description of our estimation process and methodology related to the allowance for loan losses.

Estimation of Fair Value. The estimation of fair value is significant to a number of our assets and liabilities. In addition, GAAP requires disclosure of the fair value of financial instruments as a part of the notes to the consolidated financial statements. Fair values for securities are volatile and may be influenced by a number of factors, including market interest rates, prepayment speeds, discount rates and the shape of yield curves. Fair values for most investment and mortgage-backed securities are based on quoted market prices, where available. If quoted market prices are not available, fair values are based on the quoted prices of similar instruments or estimates from independent pricing services. Where there are price variances outside certain ranges from different pricing services for specific securities, those pricing variances are reviewed with other market data to determine which of the price estimates is appropriate for that period. For securities carried at fair value through income, the change in fair value from the prior period is recorded on our income statement as fair value gain (loss) – securities.

At September 30, 2008 and continuing at June 30, 2011, the valuation inputs for our available for sale ("AFS") trust preferred securities ("TRUPs") became unobservable as a result of the significant market dislocation and illiquidity in the marketplace. Although we continue to rely on nonbinding prices compiled by third party vendors, the visibility of the observable market data (Level 2) to determine the values of these securities has become less clear. Fair values of financial assets are determined in an orderly transaction and not a forced liquidation or distressed sale at the measurement date. While we feel the financial market conditions at June 30, 2011 reflect the market illiquidity from forced liquidation or distressed sales for these TRUPs, we determined that the fair value provided by our pricing service continues to be an appropriate fair value for financial statement measurement and therefore, as we verified the reasonableness of that fair value, we have not otherwise adjusted the fair value provided by our vendor. However, the severe decline in estimated fair value is caused by the significant illiquidity in this market which contrasts sharply with our assessment of the fundamental performance of these securities. Therefore, we believe the estimate of fair value is still not clearly based on observable market data and will be based on a range of fair value data points from the market place as a result of the illiquid market specific to this type of security. Accordingly, we determined that the TRUPs security valuation is based on Level 3 inputs.

Table of Contents

Impairment of Investment Securities and Mortgage-backed Securities. Investment and mortgage-backed securities classified as AFS are carried at fair value and the impact of changes in fair value are recorded on our consolidated balance sheet as an unrealized gain or loss in "Accumulated other comprehensive income (loss)," a separate component of shareholders' equity. Securities classified as AFS or HTM are subject to our review to identify when a decline in value is other-than-temporary. Factors considered in determining whether a decline in value is other-than-temporary include: whether the decline is substantial; the duration of the decline; the reasons for the decline in value; whether the decline is related to a credit event, a change in interest rate or a change in the market discount rate; and the financial condition and near-term prospects of the issuer. Additionally, we do not currently intend to sell the security and it is not more likely than not that we will be required to sell the security before the anticipated recovery of its amortized cost basis. When it is determined that a decline in value is other-than-temporary, the carrying value of the security is reduced to its estimated fair value, with a corresponding charge to earnings for the credit portion and the noncredit portion to other comprehensive income. For certain assets we consider expected cash flows of the investment in determining if impairment exists.

The turmoil in the capital markets had a significant impact on our estimate of fair value for certain of our securities. We believe the fair values are reflective of a combination of illiquidity and credit impairment. At June 30, 2011 we have in AFS Other Stocks and Bonds \$2.9 million amortized cost basis in pooled TRUPs. Those securities are structured products with cash flows dependent upon securities issued by U.S. financial institutions, including banks and insurance companies. Our estimate of fair value at June 30, 2011 for the TRUPs is approximately \$1.0 million and reflects the market illiquidity. With the exception of the TRUPs, to the best of management's knowledge and based on our consideration of the qualitative factors associated with each security, there were no securities in our investment and mortgage-backed securities portfolio at June 30, 2011 with an other-than-temporary impairment. Given the facts and circumstances associated with the TRUPs, we performed detailed cash flow modeling for each TRUP using an industry accepted model. Prior to loading the required assumptions into the model, we reviewed the financial condition of the underlying issuing banks within the TRUP collateral pool that had not deferred or defaulted as of June 30, 2011.

Management's best estimate of a default assumption, based on a third party method, was assigned to each issuing bank based on the category in which it fell. Our analysis of the underlying cash flows contemplated various default, deferral and recovery scenarios to arrive at our best estimate of cash flows. Based on that detailed analysis, we have concluded that the other-than-temporary impairment which captures the credit component in compliance with the Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") Topic 320, "Investments – Debt and Equity Securities," was estimated at \$3.1 million at both June 30, 2011 and December 31, 2010. The noncredit charge to other comprehensive income was estimated at \$2.0 million and \$2.7 million at June 30, 2011 and December 31, 2010, respectively. The carrying amount of the TRUPs was written down with \$75,000 and \$3.0 million recognized in earnings for the six months ended June 30, 2010 and for the year ended December 31, 2009, respectively. There was no additional write-down of the TRUPs recognized in earnings for the six months ended June 30, 2011. The cash flow model assumptions represent management's best estimate and consider a variety of qualitative factors, which include, among others, the credit rating downgrades, severity and duration of the mark-to-market loss, and structural nuances of each TRUP. Management believes the detailed review of the collateral and cash flow modeling support the conclusion that the TRUPs had an other-than-temporary impairment at June 30, 2011. We will continue to update our assumptions and the resulting analysis each reporting period to reflect changing market conditions. Additionally, we do not currently intend to sell the TRUPs and it is not more likely than not that we will be required to sell the TRUPs before the anticipated recovery of their amortized cost basis.

Defined Benefit Pension Plan. The plan obligations and related assets of our defined benefit pension plan (the "Plan") are presented in "Note 12 – Employee Benefits" of the Notes to Financial Statements in our Annual Report on Form 10-K for the year ended December 31, 2010. Entry into the Plan by new employees was frozen effective December 31, 2005. Plan assets, which consist primarily of marketable equity and debt instruments, are valued using observable

market quotations. Plan obligations and the annual pension expense are determined by independent actuaries and through the use of a number of assumptions that are reviewed by management. Key assumptions in measuring the plan obligations include the discount rate, the rate of salary increases and the estimated future return on plan assets. In determining the discount rate, we utilized a cash flow matching analysis to determine a range of appropriate discount rates for our defined benefit pension and restoration plans. In developing the cash flow matching analysis, we constructed a portfolio of high quality noncallable bonds (rated AA- or better) to match as close as possible the timing of future benefit payments of the plans at December 31, 2010. Based on this cash flow matching analysis, we were able to determine an appropriate discount rate.

Salary increase assumptions are based upon historical experience and our anticipated future actions. The expected long-term rate of return assumption reflects the average return expected based on the investment strategies and asset allocation on the assets invested to provide for the Plan's liabilities. We considered broad equity and bond indices, long-term return projections, and actual long-term historical Plan performance when evaluating the expected long-term rate of return assumption. At June 30, 2011, the weighted-average actuarial assumptions of the Plan were: a discount rate of 5.63%; a long-term rate of return on Plan assets of 7.25%; and assumed salary increases of 4.50%. Material changes in pension benefit costs may occur in the future due to changes in these assumptions. Future annual amounts could be impacted by changes in the number of Plan participants, changes in the level of benefits provided, changes in the discount rates, changes in the expected long-term rate of return, changes in the level of contributions to the Plan and other factors.

Table of Contents

Long-term Advance Commitments. During 2011, we entered into the option to purchase, two years forward from the advance commitment date, \$50 million par in long-term advance commitments from FHLB at the FHLB rates on the date the option was purchased. This increases to \$200 million the total amount of options of this type we have purchased. A table detailing the optional advance commitment terms is presented in "Note 7 – Long-Term Obligations" to our consolidated financial statements included in this report. In order to obtain these commitments from the FHLB we paid fees, which at June 30, 2011, were \$11.0 million. The remaining fee, included in other assets in our consolidated balance sheet, will be amortized over the term of the advance upon exercise of the advance commitments. If any of the options are impaired, then the amount of the impairment on that option will be charged against income during the period it occurs. In determining if it is still probable that we will exercise the advance commitments quarterly, we compare all the costs of the advance commitment with the current advance rate available from the FHLB. If the current advance rate is reasonably close to or greater than the advance commitment rate then it is probable we will exercise our option. If the current rate is less, then we review the slope of the yield curve to determine if the forward yield curve supports our assumption that it is probable we will exercise the advance commitments. If the current rate is less and the forward yield curve does not support our assumption that it is probable we will exercise the advance commitments, then we value the option to determine if it is impaired and if so record the impairment in that period.

Off-Balance-Sheet Arrangements, Commitments and Contingencies

Details of our off-balance-sheet arrangements, commitments and contingencies as of June 30, 2011 and December 31, 2010, are included in "Note 11 – Off-Balance-Sheet Arrangements, Commitments and Contingencies" in the accompanying Notes to Financial Statements included in this report.

Balance Sheet Strategy

We utilize wholesale funding and securities to enhance our profitability and balance sheet composition by determining acceptable levels of credit, interest rate and liquidity risk consistent with prudent capital management. This balance sheet strategy consists of borrowing a combination of long and short-term funds from the FHLB and, when determined appropriate, issuing brokered certificates of deposit ("CDs"). These funds are invested primarily in U.S. agency mortgage-backed securities, and to a lesser extent, long-term municipal securities. Although U.S. agency mortgage-backed securities often carry lower yields than traditional mortgage loans and other types of loans we make, these securities generally (i) increase the overall quality of our assets because of either the implicit or explicit guarantees of the U.S. government, (ii) are more liquid than individual loans and (iii) may be used to collateralize our borrowings or other obligations. While the strategy of investing a substantial portion of our assets in U.S. agency mortgage-backed securities and to a lesser extent municipal securities has historically resulted in lower interest rate spreads and margins, we believe that the lower operating expenses and reduced credit risk combined with the managed interest rate risk of this strategy have enhanced our overall profitability over the last several years. At this time, we utilize this balance sheet strategy with the goal of enhancing overall profitability by maximizing the use of our capital.

Risks associated with the asset structure we maintain include a lower net interest rate spread and margin when compared to our peers, changes in the slope of the yield curve, which can reduce our net interest rate spread and margin, increased interest rate risk, the length of interest rate cycles, changes in volatility spreads associated with the mortgage-backed securities and municipal securities, the unpredictable nature of mortgage-backed securities prepayments and credit risks associated with the municipal securities. See "Part I - Item 1A. Risk Factors – Risks Related to Our Business" in our Annual Report on Form 10-K for the year ended December 31, 2010 for a discussion of risks related to interest rates. Our asset structure, net interest spread and net interest margin require us to closely monitor our interest rate risk. An additional risk is the change in fair value of the AFS securities portfolio as a result of changes in interest rates. Significant increases in interest rates, especially long-term interest rates, could adversely impact the fair value of the AFS securities portfolio, which could also significantly impact our equity

capital. Significant increases in interest rates could also adversely impact the fair value of our securities carried at fair value through income, which could significantly impact our net income. Due to the unpredictable nature of mortgage-backed securities prepayments, the length of interest rate cycles, and the slope of the interest rate yield curve, net interest income could fluctuate more than simulated under the scenarios modeled by our Asset/Liability Committee ("ALCO") and described under "Item 3. Quantitative and Qualitative Disclosures about Market Risk" in this report.

Determining the appropriate size of the balance sheet is one of the critical decisions any bank makes. Our balance sheet is not merely the result of a series of micro-decisions, but rather the size is controlled based on the economics of assets compared to the economics of funding. For several quarters up to and ending June 30, 2007, the size of our balance sheet was in a period of no growth or actual shrinkage due to the flat to inverted yield curve and tight volatility spreads during that time period. Beginning with the third quarter of 2007 we began deliberately increasing the size of our balance sheet taking advantage of the increasingly attractive economics of financial intermediation, due to the extraordinary volatility in the capital markets. While volatility in the capital markets has moderated since its high in 2008 and 2009, it has increased some during the second quarter due to concerns about the European debt crisis and the U.S. budget deficit and debt ceiling. The current investment and economic landscape makes it uncertain whether we will experience additional significant asset growth over the near term.

Table of Contents

The management of our securities portfolio as a percentage of earning assets is guided by changes in our overall loan and deposit levels, combined with changes in our wholesale funding levels. If adequate quality loan growth is not available to achieve our goal of enhancing profitability by maximizing the use of capital, as described above, then we could purchase additional securities, if appropriate, which could cause securities as a percentage of earning assets to increase. Should we determine that increasing the securities portfolio or replacing the current securities maturities and principal payments is not an efficient use of capital, we could decrease the level of securities through proceeds from maturities, principal payments on mortgage-backed securities or sales. Our balance sheet strategy is designed such that our securities portfolio should help mitigate financial performance associated with slower loan growth and higher credit costs.

The quarter ended June 30, 2011 was marked by proactive management of the investment portfolio which included continued restructuring of a portion of our investment portfolio. This restructuring resulted in a gain on the sale of AFS securities of \$3.9 million during the three months ended June 30, 2011. During the quarter ended June 30, 2011, as interest rates decreased, we continued to sell primarily lower yielding, longer duration municipal securities and lower coupon mortgage-backed securities and replaced them with primarily shorter duration municipal securities and higher coupon mortgage-backed securities that might perform better in the higher interest rate environment. During the quarter ended June 30, 2011, we increased the size of the securities portfolio as long-term U.S. Treasury yields decreased due to increased global economic concerns, loans decreased and deposits increased. The net result was an increase of \$13.2 million in our investment and U.S. agency mortgage-backed securities from \$1.83 billion at March 31, 2011, to \$1.84 billion at June 30, 2011. The average coupon of the mortgage-backed securities portfolio increased from 5.90% at December 31, 2010 to 6.10% at June 30, 2011. At June 30, 2011, securities as a percentage of assets increased to 59.0%, when compared to 58.9% at March 31, 2011 and 55.5% at December 31, 2010. Our balance sheet management strategy is dynamic and will be continually reevaluated as market conditions warrant. As interest rates, yield curves, mortgage-backed securities prepayments, funding costs, security spreads and loan and deposit portfolios change, our determination of the proper types and maturities of securities to own, proper amount of securities to own and funding needs and funding sources will continue to be reevaluated. Should the economics of asset accumulation decrease, we might allow the balance sheet to shrink through run-off or asset sales. However, should the economics become more attractive, we will strategically increase the balance sheet.

With respect to liabilities, we will continue to utilize a combination of FHLB advances and deposits to achieve our strategy of minimizing cost while achieving overall interest rate risk objectives as well as the liability management objectives of the ALCO. FHLB funding and brokered CDs represent wholesale funding sources we are currently utilizing. Our FHLB borrowings at June 30, 2011 decreased 0.7%, or \$3.9 million, to \$532.8 million from \$536.7 million at March 31, 2011, primarily as a result of an increase in deposits. During 2011, we entered into the option to purchase, two years forward from the advance commitment date, \$50 million par in long-term advance commitments from FHLB at the FHLB rates on the date the option was purchased. This increases to \$200 million the total amount of options of this type we have purchased. As of June 30, 2011 we had \$163.7 million in long-term brokered CDs. All of the long-term brokered CDs have short-term calls that we control. We utilized long-term callable brokered CDs because the brokered CDs better matched overall ALCO objectives at the time of issuance by protecting us with fixed rates should interest rates increase, while providing us options to call the funding should interest rates decrease. Our wholesale funding policy currently allows maximum brokered CDs of \$180 million; however, this amount could be increased to match changes in ALCO objectives. We have been actively calling and reissuing our brokered CDs which has allowed us to both extend the maturities and lower the funding costs. The potential higher interest expense and lack of customer loyalty are risks associated with the use of brokered CDs. During the three months ended June 30, 2011, a decrease in FHLB borrowings, coupled with the overall growth in deposits, resulted in a decrease in our total wholesale funding as a percentage of deposits, not including brokered CDs, to 33.6% at June 30, 2011, from 50.7% at June 30, 2010 and 36.7% at December 31, 2010.

Net Interest Income

Net interest income is one of the principal sources of a financial institution's earnings stream and represents the difference or spread between interest and fee income generated from interest earning assets and the interest expense paid on deposits and borrowed funds. Fluctuations in interest rates or interest rate yield curves, as well as repricing characteristics and volume and changes in the mix of interest earning assets and interest bearing liabilities, materially impact net interest income.

Net interest income for the six months ended June 30, 2011 was \$46.8 million, an increase of \$4.4 million, or 10.3%, compared to the same period in 2010. The overall increase in net interest income was the result of the decrease in interest expense.

Table of Contents

During the six months ended June 30, 2011, total interest income decreased \$183,000, or 0.3%, to \$65.6 million compared to \$65.8 million for the same period in 2010. The decrease in total interest income was the result of a decrease in the average yield on average interest earning assets from 5.10% for the six months ended June 30, 2010 to 5.01% for the six months ended June 30, 2011 which more than offset the increase in average interest earning assets of \$68.3 million, or 2.5%, from \$2.78 billion to \$2.85 billion. Total interest expense decreased \$4.6 million, or 19.5%, to \$18.8 million during the six months ended June 30, 2011 as compared to \$23.4 million during the same period in 2010. The decrease was attributable to a decrease in the average yield on interest bearing liabilities for the six months ended June 30, 2011, to 1.62% from 2.02% for the same period in 2010, which was partially offset by an increase in average interest bearing liabilities of \$10.1 million, or 0.4%, from \$2.33 billion for the six months ended June 30, 2010 to \$2.34 billion for the same period in 2011.

Net interest income increased during the three months ended June 30, 2011 when compared to the same period in 2010 primarily as a result of an increase in interest income on mortgage-backed and related securities. Our average interest earning assets increased \$44.1 million, or 1.6%. The increase in the yield on interest earning assets is reflective of a 70 basis point increase in the yield on our securities portfolio while offset by a 28 basis point decrease in the yield on loans. The decrease in the average yield on interest bearing liabilities of 38 basis points is a result of an overall decrease in interest rates compared to the same period in 2010. For the three months ended June 30, 2011, our net interest spread and net interest margin increased to 3.52% and 3.80%, respectively, from 2.77% and 3.09% when compared to the same period in 2010.

During the six months ended June 30, 2011, average loans increased \$38.4 million, or 3.8%, compared to the same period in 2010. Municipal loans represent a large part of this increase. The average yield on loans decreased from 7.26% for the six months ended June 30, 2010 to 6.91% for the six months ended June 30, 2011. The decrease in interest income on loans of \$801,000, or 2.3%, to \$34.4 million for the six months ended June 30, 2011, when compared to \$35.2 million for the same period in 2010 was the result of a decrease in the average yield which more than offset the increase in the average balance. The decrease in the yield on loans was due to overall lower interest rates. For the three months ended June 30, 2011, average loans increased \$33.7 million, or 3.3%, to \$1.05 billion, when compared to \$1.02 billion for the same period in 2010. The average yield on loans decreased from 7.19% for the three months ended June 30, 2010 to 6.91% for the three months ended June 30, 2011. Due to the competitive loan pricing environment, we anticipate that we may be required to continue to offer lower interest rate loans that compete with those offered by other financials institutions in order to retain quality loan relationships. Offering lower interest rate loans could impact the overall loans yield and, therefore, profitability.

Average investment and mortgage-backed securities increased \$41.7 million, or 2.4%, from \$1.70 billion to \$1.74 billion, for the six months ended June 30, 2011 when compared to the same period in 2010. This increase was the result of securities purchased due primarily to buying opportunities available throughout early 2011 and increased volatility during the second quarter. At June 30, 2011, virtually all of our mortgage-backed securities were fixed rate securities with less than one percent variable rate mortgage-backed securities. The overall yield on average investment and mortgage-backed securities increased slightly to 3.96% during the six months ended June 30, 2011, from 3.95% during the same period in 2010. The increase in the average yield primarily reflects decreased amortization expense associated with decreased mortgage-backed securities prepayments during 2011 when compared to 2010. During the first six months of 2010, prepayments on our mortgage-backed securities increased significantly due to a one time prepayment event caused by a Fannie Mae and Freddie Mac announcement that they had not repurchased delinquent mortgage loans from mortgage pools for several months and would be repurchasing those loans primarily during the first six months of 2010. This caused a significant one time prepayment event that increased our amortization expense significantly during the first six months of 2010. Interest income on investment and mortgage-backed securities increased \$629,000 during the six months ended June 30, 2011, or 2.1%, compared to the same period in 2010 due to an increase in the average yield and the average balance. For the three months ended June 30, 2011, average investment and mortgage-backed securities increased \$22.7 million, or 1.3%, to \$1.77 billion,

when compared to \$1.75 billion for the same period in 2010. The overall yield on average investment and mortgage-backed securities increased to 4.09% during the three months ended June 30, 2011, from 3.39% during the same period in 2010. Interest income from investment and mortgage-backed securities increased \$3.2 million, or 24.1%, to \$16.5 million for the three months ended June 30, 2011, compared to \$13.3 million for the same period in 2010. The increase in the average yield primarily reflects decreased amortization expense associated with increased mortgage-backed securities prepayments due to lower interest rates in the latter half of 2010 creating refinancing alternatives, tighter spreads on mortgage-backed securities and reinvesting prepayments in an overall lower interest rate environment. The increase in interest income for the three months is due to the Fannie Mae and Freddie Mac prepayments discussed above.

Average FHLB stock and other investments decreased \$8.2 million, or 21.3%, to \$30.4 million, for the six months ended June 30, 2011, when compared to \$38.6 million for the same period in 2010 due to the decrease in FHLB advances during 2011 and the corresponding requirement to hold stock associated with those advances. Interest income from our FHLB stock and other investments decreased \$9,000, or 6.4%, during the six months ended June 30, 2011, when compared to the same period in 2010 due to the decrease in the average balance which more than offset the increase in the average yield from 0.74% for the six months ended June 30, 2010 compared to 0.88% for the same period in 2011. For the three months ended June 30, 2011, average FHLB stock and other investments decreased \$9.9 million, or 25.9%, to \$28.3 million, when compared to \$38.2 million for the same period in 2010. The FHLB stock is a variable instrument with the rate typically tied to the federal funds rate. We are required as a member of FHLB to own a specific amount of stock that changes as the level of our FHLB advances and asset size change. For the three months ended June 30, 2011, interest income from FHLB stock and other investments decreased \$7,000, or 11.9%, to \$52,000, when compared to \$59,000 for the same period in 2010 as a result of the decrease in the average balance which more than offset the increase in the average yield from 0.62% in 2010 to 0.74% in 2011.

Table of Contents

Average interest earning deposits decreased \$2.9 million, or 20.9%, to \$11.1 million, for the six months ended June 30, 2011, when compared to \$14.0 million for the same period in 2010. Interest income from interest earning deposits decreased \$2,000, or 13.3%, for the six months ended June 30, 2011, when compared to the same period in 2010, as a result of the decrease in the average balance which more than offset the increase in the average yield from 0.22% in 2010 to 0.24% in 2011. Average interest earning deposits decreased \$574,000, or 8.6%, to \$6.1 million, for the three months ended June 30, 2011, when compared to \$6.7 million for the same period in 2010. Interest income from interest earning deposits decreased \$1,000, or 25.0%, for the three months ended June 30, 2011, when compared to the same period in 2010, as a result of the decrease in the average balance and the average yield from 0.24% in 2010 to 0.20% in 2011.

During the six months ended June 30, 2011, our average securities increased less than our average loans compared to the same period in 2010. The mix of our average interest earning assets reflected a decrease in average total securities as a percentage of total average interest earning assets compared to the prior period as securities averaged 62.3% during the six months ended June 30, 2011 compared to 62.6% during the same period in 2010. Average loans were 37.3% of average total interest earning assets and other interest earning asset categories averaged 0.4% for the six months ended June 30, 2011. During 2010, the comparable mix was 36.9% in loans and 0.5% in the other interest earning asset categories.

Total interest expense decreased \$4.6 million, or 19.5%, to \$18.8 million during the six months ended June 30, 2011 as compared to \$23.4 million during the same period in 2010. The decrease was primarily attributable to decreased funding costs as the average yield on interest bearing liabilities decreased from 2.02% for 2010 to 1.62% for the six months ended June 30, 2011, which more than offset an increase in average interest bearing liabilities. The increase in average interest bearing liabilities of \$10.1 million, or 0.4% included an increase in deposits of \$220.4 million, or 14.7% that was offset by a decrease in FHLB advances and other short-term obligations of \$210.3 million, or 27.4%. For the three months ended June 30, 2011, total interest expense decreased \$2.3 million, or 20.1%, to \$9.2 million, compared to \$11.5 million for the same period in 2010 as a result of a decrease in the average yield and average balance on interest bearing liabilities. Average interest bearing liabilities decreased \$16.0 million, or 0.7%, and the average yield decreased from 1.95% for the three months ended June 30, 2010 to 1.57% for the three months ended June 30, 2011.

Average interest bearing deposits increased \$220.4 million, or 14.7%, from \$1.50 billion to \$1.72 billion, while the average rate paid decreased from 1.31% for the six months ended June 30, 2010 to 0.95% for the six months ended June 30, 2011. For the three months ended June 30, 2011, average interest bearing deposits increased \$221.8 million, or 14.7%, to \$1.73 billion, when compared to \$1.51 billion for the same period in 2010 while the average rate paid decreased from 1.26% for the three month period ended June 30, 2010 to 0.94% for the three month period ended June 30, 2011. Average time deposits increased \$143.7 million, or 20.1%, from \$713.2 million to \$856.9 million while the average rate paid decreased to 1.35% for the six months ended June 30, 2011 as compared to 1.97% for the same period in 2010. Average interest bearing demand deposits increased \$66.6 million, or 9.3%, while the average rate paid decreased to 0.57% for the six months ended June 30, 2011 as compared to 0.74% for the same period in 2010. Average savings deposits increased \$10.1 million, or 13.7%, while the average rate paid decreased to 0.29% for the six months ended June 30, 2011 as compared to 0.46% for the same period in 2010. Interest expense for interest bearing deposits for the six months ended June 30, 2011, decreased \$1.7 million, or 17.0%, when compared to the same period in 2010 due to the decrease in the average yield which more than offset the increase in the average balance. Average noninterest bearing demand deposits increased \$45.8 million, or 11.4%, during the six months ended June 30, 2011. The latter three categories, which are considered the lowest cost deposits, comprised 60.6% of total average deposits during the six months ended June 30, 2011 compared to 62.6% during the same period in 2010. The increase in our average total deposits is primarily the result of an increase in deposits from municipalities and, to a lesser extent, deposit growth due to branch expansion, continued market penetration, and an increase in brokered CDs issued.

During the six months ended June 30, 2011, we issued \$80.4 million of long-term brokered CDs. All of the long-term brokered CDs have short-term calls that we control. We utilize long-term callable brokered CDs because the brokered CDs better match overall ALCO objectives at the time of issuance by protecting us with fixed rates should interest rates increase, while providing us options to call the funding should interest rates decrease. At June 30, 2011, we had \$163.7 million in brokered CDs that represented 7.3% of deposits compared to \$161.3 million, or 7.6% of deposits, at December 31, 2010. At June 30, 2011 and December 31, 2010, all of the brokered CDs had maturities of less than six years. Our wholesale funding policy currently allows maximum brokered CDs of \$180 million; however, this amount could be increased to match changes in ALCO objectives. We have been actively calling and reissuing our brokered CDs which has allowed us to both extend the maturities and lower the funding costs. This was the primary reason for the issuance of \$80.4 million of brokered CDs during 2011. The potential higher interest cost and lack of customer loyalty are risks associated with the use of brokered CDs.

Table of Contents

Average short-term interest bearing liabilities, consisting primarily of FHLB advances, federal funds purchased and repurchase agreements, were \$239.2 million, a decrease of \$61.9 million, or 20.6%, for the six months ended June 30, 2011 when compared to the same period in 2010. Interest expense associated with short-term interest bearing liabilities decreased \$113,000, or 3.2%, while the average rate paid increased 52 basis points to 2.90% for the six months ended June 30, 2011, when compared to 2.38% for the same period in 2010. For the three months ended June 30, 2011, average short-term interest bearing liabilities decreased \$82.4 million, or 24.1%, when compared to the same period in 2010. Interest expense associated with short-term interest bearing liabilities decreased \$162,000, or 8.7%, while the average rate paid increased to 2.64% for the three month period ended June 30, 2011 when compared to 2.19% for the same period in 2010. The increase in the average rate paid was due to the higher rate long-term FHLB advances rolling into the short-term FHLB advances category. The decrease in the interest expense was due to a decrease in the average balance while offset by an increase in the average rate paid.

Average long-term interest bearing liabilities consisting of FHLB advances decreased \$148.4 million, or 31.8%, during the six months ended June 30, 2011 to \$318.0 million as compared to \$466.4 million for the six months ended June 30, 2010. Interest expense associated with long-term FHLB advances decreased \$2.8 million, or 33.1%, and the average rate paid decreased seven basis points for the six months ended June 30, 2011 when compared to the same period in 2010. For the three months ended June 30, 2011, long-term interest bearing liabilities decreased \$155.4 million, or 35.1%, when compared to the same period in 2010. Interest expense associated with long-term FHLB advances decreased \$1.5 million, or 36.0%, and the average rate paid decreased to 3.60% for the three months ended June 30, 2011 when compared to 3.66% for the same period in 2010. The decrease in the average long-term FHLB advances is due primarily to advances classified as long-term at December 31, 2010 rolling into the short-term category, an increase in the issuance of long-term callable brokered CDs, the use of more short-term FHLB advances during the period and the decision to enter into \$150 million par in long-term advance commitments from the FHLB. During the second half of 2010, we entered into the option to fund between one and a half years and two years forward from the advance commitment date, \$150 million par in long-term advance commitments from the FHLB at the FHLB rates on the date the option was purchased. During the first quarter of 2011 we entered into an additional \$50 million of these options to fund two years forward from the advance commitment date, for a total of \$200 million. In order to obtain these commitments from the FHLB, we paid fees, which at June 30, 2011, were \$11.0 million. The fee, included in other assets in our consolidated balance sheet, will be amortized over the term of the advance when we exercise the advance commitments. Should we determine the advance commitments will not be exercised, or they are impaired, the fee will be expensed in the period determination is made. FHLB advances are collateralized by FHLB stock, securities and nonspecific real estate loans.

Average long-term debt, consisting of our junior subordinated debentures issued in 2003 and August 2007 and junior subordinated debentures acquired in the purchase of FWBS, was \$60.3 million for the three and six months ended June 30, 2011 and 2010. During the third quarter ended September 30, 2007, we issued \$36.1 million of junior subordinated debentures in connection with the issuance of trust preferred securities by our subsidiaries Southside Statutory Trusts IV and V. The \$36.1 million in debentures were issued to fund the purchase of FWBS, which occurred on October 10, 2007. Interest expense associated with long-term debt increased \$3,000, or 0.2% to \$1.6 million for the six months ended June 30, 2011, when compared to the same period in 2010, as a result of the slight increase in the average yield of one basis point during the six months ended June 30, 2011 when compared to the same period in 2010. Interest expense was \$814,000 for both of the three month periods ended June 30, 2011 and 2010. The interest rate on the \$20.6 million of long-term debentures issued to Southside Statutory Trust III adjusts quarterly at a rate equal to three-month LIBOR plus 294 basis points. The \$23.2 million of long-term debentures issued to Southside Statutory Trust IV and the \$12.9 million of long-term debentures issued to Southside Statutory Trust V have fixed rates of 6.518% through October 30, 2012 and 7.48% through December 15, 2012, respectively, and thereafter, adjust quarterly. The interest rate on the \$3.6 million of long-term debentures issued to Magnolia Trust Company I, assumed in the purchase of FWBS, adjusts quarterly at a rate equal to three-month LIBOR plus 180 basis points.

- (1) Interest on loans includes fees on loans that are not material in amount.
- (2) Interest income includes taxable-equivalent adjustments of \$1,948 and \$1,648 for the six months ended June 30, 2011 and 2010, respectively.
- (3) Interest income includes taxable-equivalent adjustments of \$3,126 and \$2,859 for the six months ended June 30, 2011 and 2010, respectively.
- (4) For the purpose of calculating the average yield, the average balance of securities is presented at historical cost.
- (5) Represents junior subordinated debentures issued by us to Southside Statutory Trust III, IV, and V in connection with the issuance by Southside Statutory Trust III of \$20 million of trust preferred securities, Southside Statutory Trust IV of \$22.5 million of trust preferred securities, Southside Statutory Trust V of \$12.5 million of trust preferred securities and junior subordinated debentures issued by FWBS to Magnolia Trust Company I in connection with the issuance by Magnolia Trust Company I of \$3.5 million of trust preferred securities.
- (6) Includes average equity of noncontrolling interest of \$1,788 and \$1,042 for the six months ended June 30, 2011 and 2010, respectively.
- (7) Information has been restated for the six months ended June 30, 2011 to reflect the securities carried at fair value through income and the corresponding deferred tax component.

Note: As of June 30, 2011 and 2010, loans totaling \$13,208 and \$15,728, respectively, were on nonaccrual status. Our policy is to reverse previously accrued but unpaid interest on nonaccrual loans; thereafter, interest income is recorded to the extent received when appropriate.
