UNITED STATES
SECURITIES AND EXCHANGE COMMISSION

WASHINGTON, D.C. 20549

FORM 10-Q

x **QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

For the Quarterly Period Ended June 30, 2012

OR

.. **TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

Commission File No. 0-29253

BEASLEY BROADCAST GROUP, INC.

(Exact Name of Registrant as Specified in Its Charter)

Edgar Filing: BEASLEY BROADCAST GROUP INC - Form 10-Q

Delaware
(State of Incorporation)

65-0960915
(I.R.S. Employer

Identification Number)

3033 Riviera Drive, Suite 200

Naples, Florida 34103

(Address of Principal Executive Offices and Zip Code)

(239) 263-5000

(Registrant's Telephone Number, Including Area Code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer and smaller reporting company in Rule 12b-2 of the Exchange Act.

Large accelerated filer

Accelerated filer

Non-accelerated filer (Do not check if a smaller reporting company)

Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

Indicate the number of shares outstanding of each of the issuer's classes of common stock, as of the latest practicable date.

Class A Common Stock, \$.001 par value, 6,147,878 Shares Outstanding as of July 27, 2012

Class B Common Stock, \$.001 par value, 16,662,743 Shares Outstanding as of July 27, 2012

Table of Contents

A summary of the stock option activity under the 1993 Plan, 2002 Plan and the inducement grant given to our CEO for the three months ended March 31, 2009 is as follows:

| | Shares | Weighted Average Exercise Price | Weighted Average Remaining Contractual Term (in years) | Aggregate Intrinsic Value |
|--|---------------|--|---|--|
| Balance January 1, 2009 (1,794,968 options vested) | 4,053,276 | \$ 8.12 | | |
| Granted | 2,316,000 | 0.22 | | |
| Forfeited | (1,092,205) | 6.87 | | |
| Expired | (215,052) | 7.89 | | |
| Options outstanding March 31, 2009 | 5,062,019 | \$ 4.45 | 6.9 | \$ 13 |
| Options exercisable March 31, 2009 (1) | 1,714,810 | \$ 9.52 | 2.9 | \$ |
| Options vested and expected to vest March 31, 2009 | 5,059,216 | \$ 4.45 | 6.9 | \$ 13 |

(1) Options and awards granted prior to January 25, 2006 are generally exercisable immediately, but the shares purchased are subject to restriction on transfer until vested.

The aggregate intrinsic value in the table above represents the value (the difference between our closing common stock price on the last trading day of the three months ended March 31, 2009, which was \$0.22 on March 31, 2009, and the exercise price of the options, multiplied by the number of in-the-money options) that would have been received by the option holders had all option holders exercised their options on March 31, 2009. As of March 31, 2009, total unrecognized stock-based compensation expense relating to unvested employee stock awards, adjusted for estimated forfeitures, was \$12,736. This amount is expected to be recognized over a weighted-average period of 3.3 years. The weighted average fair value of options granted during the three months ended March 31, 2009 and 2008 was \$0.18 and \$3.90, respectively.

12. Recent Accounting Pronouncement

In June 2008, the Emerging Issues Task Force issued Issue No. 07-5, Determining Whether an Instrument (or Embedded Feature) Is Indexed to an Entity's Own Stock, or EITF 07-5. EITF 07-5 provides guidance regarding the proper accounting treatment for freestanding equity derivatives or embedded equity derivative features as either equity instruments or as assets or liabilities requiring remeasurement at fair value through earnings. EITF 07-5 became effective for us on January 1, 2009 and was applied to all instruments outstanding on the date of adoption. The adoption of EITF 07-5 did not materially impact our financial statements.

13. Subsequent Event

On May 7, 2009, Dr. Falk Pharma GmbH, or Dr. Falk, and we entered into an agreement to settle our remaining financial obligation to Dr. Falk. Under the terms of a termination agreement dated June 7, 2007, Altus agreed to reacquire from Dr. Falk the European marketing rights to Trizytek in exchange for total cash payments of 12.0 million, payable in installments through June 2010. At March 31, 2009, our total remaining obligation to Dr. Falk was 5.0 million; 2.0 million payable on June 6, 2009 and 3.0 million payable on June 6, 2010. Under the terms of the May 7, 2009 amended termination agreement, we will make a cash payment of 1.8 million in May 2009 in full settlement of our remaining obligation. We will record a gain on the termination of the Dr. Falk obligation of approximately \$3.7 million in the second quarter of 2009.

Table of Contents

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Overview

We are a biopharmaceutical company focused on the development and commercialization of oral and injectable protein therapeutics using our proprietary protein crystallization technology, which we believe will have significant advantages over existing products and will address unmet medical needs. Our lead product candidate is ALTU-238, a long-acting, crystallized formulation of recombinant human growth hormone, for which we have completed a Phase II clinical trial in adults for growth hormone deficiency and have begun a Phase II clinical trial for growth hormone deficiency in pediatric patients. Our next most advanced product candidate is ALTU-237, for which we have completed a Phase I clinical trial for the treatment of hyperoxalurias. We also have a pipeline of other product candidates in preclinical research and development.

On January 26, 2009, we announced a strategic realignment to focus on the advancement ALTU-238. To conserve capital resources, we have discontinued our activities in support of Trizytek™ [lipotamase], an enzyme replacement therapy for patients suffering from malabsorption due to exocrine pancreatic insufficiency. In connection with the realignment, we implemented a workforce reduction of approximately 70% of our workforce, primarily in functions related to the Trizytek program as well as certain general and administrative positions. As a result of these activities, we recognized a charge of \$3.6 million in the first quarter of 2009, primarily for severance and related expenses. We anticipate a further restructuring charge of between \$4.0 and \$6.0 million in the second quarter of 2009 primarily resulting from our plans to vacate an office facility in Waltham, Massachusetts. We expect the restructuring plan will be completed in the first half of 2009.

On February 20, 2009, Cystic Fibrosis Foundation Therapeutics, Inc., or CFFTI, and we entered into a letter agreement, or the Letter Agreement, and a license agreement, or the License Agreement, terminating our strategic alliance agreement. Under the terms of the License Agreement, we assigned the Trizytek trademark and certain patent rights to CFFTI and granted CFFTI an exclusive, worldwide, royalty-bearing license to use certain other intellectual property owned or controlled by us to develop, manufacture and commercialize any product using, in any combination, the three active pharmaceutical ingredients, or APIs, which comprise Trizytek. In these agreements, we also agreed to assist CFFTI with a transition of our on-going development and regulatory activities and clinical trials through March 27, 2009, after which CFFTI is responsible for future development activities. In exchange, CFFTI agreed to release us from all obligations and liabilities resulting from the original strategic alliance agreement, and to pay us a percentage of any proceeds CFFTI realizes associated with respect to any rights licensed or assigned to CFFTI under the License Agreement.

Our future operating results will largely depend on the progress of ALTU-238 in the clinical development process and our ability to raise sufficient capital to fund operations. The results of our operations will vary significantly from year to year and from quarter to quarter and depend on, among other factors: our level of investment in pre-clinical and clinical research and development; our success in manufacturing drug supplies and procuring the APIs for our products; and the outcome of the clinical trials we conduct.

We have generated significant losses as we have advanced our product candidates into clinical development and expect to continue to generate losses as we continue development of ALTU-238 and finalize our realignment of operations. As of March 31, 2009, we had \$25.0 million of cash, cash equivalents and short-term marketable securities and an accumulated deficit of \$356.3 million. We believe we have sufficient cash to meet our funding requirements into the third quarter of 2009. We will require significant additional funding to remain a going concern and to fund operations through December 31, 2009 and until such time, if ever, we become profitable. However, there can be no assurance that adequate additional financing will be available to us on acceptable terms.

Table of Contents

Financial Operations Overview

Contract Revenue. Our contract revenue in 2008 consisted of amounts earned under former collaborative research and development agreements with CFFTI relating to Trizytek and with Genentech, Inc., or Genentech, related to ALTU-238. We do not anticipate recognizing any contract revenue in 2009 unless we enter into a new collaborative agreement for one of our research and development programs. We do not expect to generate any revenue from the sale of products in the foreseeable future.

Research and Development Expense. Research and development expense consists primarily of expenses incurred in developing and testing product candidates, including:

salaries and related expenses for personnel, including stock-based compensation expenses;

fees paid to professional service providers in conjunction with independently monitoring our clinical trials and evaluating data in conjunction with our clinical trials;

costs of contract manufacturing services;

costs of materials used in clinical and non-clinical trials;

performance of non-clinical trials, including toxicity studies in animals; and

depreciation of equipment used to develop our products and costs of facilities.

We expense research and development costs as incurred.

We completed a Phase III efficacy clinical trial of the capsule form of Trizytek in August 2008, and were conducting two long-term safety studies and preparing for the filing of a New Drug Application, or NDA, when we decided to terminate development. As of March 31, 2009, we had incurred approximately \$170.0 million for the development of Trizytek. We have fulfilled our requirements to assist CFFTI with a transition of our on-going development and regulatory activities and clinical trials and do not anticipate incurring any further costs related to Trizytek.

We completed a Phase II clinical trial of ALTU-238 in adults in 2006 and began a Phase II clinical trial for pediatric patients in March 2009. From January 1, 2003, the date on which we began separately tracking development costs for ALTU-238, through March 31, 2009, we incurred approximately \$58.5 million in total development costs for this product candidate.

We completed a Phase I clinical trial for ALTU-237 in June 2008. From January 1, 2006, the date on which we began separately tracking development costs for ALTU-237, through March 31, 2009, we have incurred approximately \$21.1 million in total development costs for this product candidate. Further development of ALTU-237 is on hold until sufficient additional funding can be secured.

The amount and timing of resources we devote to our clinical and preclinical product candidates in the future will be influenced by our ability to fund further development activities, or the potential to enter into one or more strategic collaborations that would provide full or partial funding for the development of our product candidates.

The successful development of our product candidates is highly uncertain. At this time, we cannot precisely estimate or know the nature, timing and estimated costs of the efforts that will be necessary to complete the remainder of the development of ALTU-238 or any of our clinical or preclinical product

Table of Contents

candidates, or the period, if any, in which material net cash inflows will commence. This is due to the numerous risks and uncertainties associated with developing drugs, including the uncertainty of:

the scope, rate of progress and expense of our clinical trials and other research and development activities;

the potential benefits of our product candidates over other therapies;

our ability to manufacture, market, commercialize and achieve market acceptance for any of our product candidates that we are developing or may develop in the future;

future clinical trial results;

the terms and timing of any collaborative, licensing and other arrangements that we may establish;

the expense and timing of regulatory approvals;

the expense of filing, prosecuting, defending and enforcing any patent claims and other intellectual property rights; and

the availability of sufficient capital resources to fund development activities.

A change in the outcome of any of these variables with respect to the development of a product candidate could mean a significant change in the costs and timing associated with the development of that product candidate, including a decision to discontinue the development of that product candidate. For example, if the U.S. Food and Drug Association, or FDA, or other regulatory authority were to require us to conduct clinical trials beyond those which we currently anticipate will be required for the completion of clinical development of a product candidate, or if we experience significant delays in enrollment in any of our clinical trials, we would be required to expend significant additional financial resources and time on the completion of clinical development. There is no guarantee that such additional resources will be available to us. Notwithstanding the above, we expect research and development expenses to decrease during the remainder of 2009 as a result of our discontinuance of the Trizytek program and the realignment plan.

General, Sales and Administrative Expense. General, sales and administrative expense consists primarily of salaries and other related costs for personnel, including stock-based compensation expenses, in our executive, finance, information technology and human resource functions. Other costs primarily include facility costs not otherwise included in research and development expense, corporate insurance, and professional fees for accounting and legal services, including patent-related expenses.

We expect general, sales and administrative expenses to decrease significantly in 2009 as a result of the realignment, primarily due to a significant reduction in general and administrative headcount and the rationalization of facilities-related and other variable infrastructure expenses consistent with an organization of approximately 40 employees.

Interest and Other Income (Expense), Net. Interest income consists of interest earned on our cash and cash equivalents and marketable securities. Interest expense consists of interest incurred on equipment loans and amortization of the discount associated with our obligation to Dr. Falk Pharma GmbH, or Dr. Falk, with whom we formerly had a collaborative agreement regarding the development of Trizytek in certain countries outside the United States. The discount on the obligation to Dr. Falk is being amortized to interest expense over the life of the obligation.

Table of Contents

Preferred Stock Dividends. Preferred stock dividends consist of cumulative but undeclared dividends payable on our redeemable preferred stock.

Critical Accounting Policies and Significant Judgments and Estimates

A critical accounting policy is one which is both important to the portrayal of our financial condition and results and requires management's most difficult, subjective or complex judgments, often as a result of the need to make estimates about the effect of matters that are inherently uncertain. See the discussion of our significant accounting policies in Note 3 to the Consolidated Financial Statements included in our Annual Report on Form 10-K for fiscal year 2008 for additional information regarding our critical accounting policies.

Restructuring charges. We account for restructuring charges in accordance with Statement of Financial Accounting Standard, or SFAS, No. 146, Accounting for Costs Associated with Exit or Disposal Activities. Facilities related expenses and liabilities associated with our decision to abandon certain facilities in the second quarter of 2009 will include an estimate of the remaining rental obligation, net of estimated sublease income, for a facility we will vacate. This estimate and its assumptions, which will include an estimate of a sublease rate per square foot as well as a period of time before we are able to enter into a sublease, will be reviewed on a regular basis until the outcome is finalized, and we will make any modifications to our estimates we believe necessary, based on our judgment, to reflect any changed circumstances. It is possible that such estimates could change in the future resulting in additional adjustments, and the effect of any such adjustments could be material.

Results of Operations***Three Months Ended March 31, 2009 Compared to Three Months Ended March 31, 2008******Contract revenue, net***

| | Three Months Ended | | Increase (Decrease) | |
|-----------------------|-------------------------------|-------------|----------------------------|----------|
| | March 31, | | | |
| | 2009 | 2008 | \$ | % |
| | (dollars in thousands) | | | |
| Contract revenue, net | \$ | \$2,622 | \$(2,622) | 100% |

Contract revenue in 2008 was associated with our former collaboration agreements with CFFTI for Trizytek and Genentech for ALTU-238. We will not recognize any contract revenue in 2009 unless we enter into a new collaborative arrangement related to one of our research or development programs. Contract revenue in the first quarter of 2008 included approximately \$1.9 million related to the CFFTI collaboration based on efforts expended during that quarter, but was limited by the amount of deferred revenue at the beginning of the period which represented cash previously received from CFFTI. Revenue related to the CFFTI collaboration was recognized under the proportional performance method. Under this method, to the extent we incurred direct development costs each year to advance Trizytek, we recognized revenue based on the proportion of actual costs spent to our estimate of total direct development costs. We also recognized \$0.7 million of revenue from Genentech as a result of an agreement for services we performed on their behalf in 2007, before the termination of that collaboration and license agreement.

|--------------------------------|-------------------------------|---------------------------|----------------------------|----------|
| | 2009 | March 31, 2008 | \$ | % |
| | (dollars in thousands) | | | |
| Trizytek | \$ 8,080 | \$ 14,841 | \$ (6,761) | (46%) |
| ALTU-238 | 4,653 | 2,466 | 2,187 | 89% |
| ALTU-237 | 229 | 1,937 | (1,708) | (88%) |
| Other research and development | 466 | 1,862 | (1,396) | (75%) |
| Stock-based compensation | 553 | 461 | 92 | 20% |
| Total research and development | \$ 13,981 | \$ 21,567 | \$ (7,586) | (35%) |

The composition of research and development expenses in 2009 reflects our decision to cease development of Trizytek as announced on January 26, 2009, and to focus our development activities on ALTU-238 and our other research and development projects. Costs spent on Trizytek in the first quarter of 2009 represent our commitment to carry on certain activities before development of Trizytek was transferred to CFFTI on March 27, 2009 in accordance with the termination of our strategic alliance agreement and new license arrangement with CFFTI. Those activities included continuation of the two Phase III long-term safety trials through March 27, 2009 and manufacturing activities associated with producing validation lots of APIs. Costs spent on ALTU-238 include preparatory costs of \$1.1 million associated with our Phase II pediatric trial which began in March 2009 in addition to \$3.0 million of costs associated with continued manufacturing activities to improve formulation to support our planned Phase III clinical trials in 2010. ALTU-237 costs decreased significantly from the same period last year since we have suspended further development activities on this program until sufficient funding is available. Other research and development spending reflects our continued efforts to exploit our core crystallization capabilities.

General, sales and administrative

| | Three Months Ended | | Increase (Decrease) | |
|---|-------------------------------|---------------------------|----------------------------|----------|
| | 2009 | March 31, 2008 | \$ | % |
| | (dollars in thousands) | | | |
| Personnel | \$ 1,243 | \$ 2,648 | \$ (1,405) | (53%) |
| Legal services | 466 | 242 | 224 | 93% |
| General insurance | 204 | 260 | (56) | (22%) |
| Market research and related costs | 40 | 112 | (72) | (64%) |
| Consulting and professional services | 295 | 576 | (281) | (49%) |
| Stock-based compensation | 649 | 1,063 | (414) | (39%) |
| Other general, sales and administrative | 534 | 875 | (341) | (39%) |
| Total general, sales and administrative | \$ 3,431 | \$ 5,776 | \$ (2,345) | (41%) |

General, sales and administrative costs for the three months ended March 31, 2009 decreased from the same period in 2008 primarily due to a \$1.4 million decrease in personnel costs. Our general, sales and administrative headcount just prior to the termination of employees on March 27, 2009 in conjunction with the realignment plan was 23 employees as compared to 34 employees at March 31, 2008. Contributing to the decrease in headcount was the

resignation of three executives during 2008 after March 31, 2008. During the three months ended March 31, 2008, we also incurred a one-time charge of \$0.6

-18-

Table of Contents

million associated with a separation agreement with Sheldon Berkle, our former Chief Executive Officer, or CEO, who resigned in February 2008 and increased recruiting costs during the three months ended March 31, 2008 related to the search for a new CEO. Stock-based compensation also decreased during the three months ended March 31, 2009 as compared to the same period in 2008 due primarily to the decrease in headcount. Professional fees also decreased during 2009 as compared to 2008. During the first quarter 2008, we incurred \$0.2 million of costs relating to a tax study, for which we had no comparable costs in 2009. Partially offsetting the decrease in general, sales and administrative costs was an increase in outside legal costs during the first quarter of 2009 as compared to the same period of 2008 primarily due to work related to potential financing agreements during 2009.

Restructuring charges

| | Three Months Ended | | Increase (Decrease) | |
|--|-------------------------------|-------------|----------------------------|----------|
| | March 31, | | \$ | % |
| | 2009 | 2008 | | |
| | (dollars in thousands) | | | |

| | | | | |
|-----------------------|---------|----|-----|-----|
| Restructuring charges | \$3,629 | \$ | N/A | N/A |
|-----------------------|---------|----|-----|-----|

In connection with the realignment plan, we recorded a restructuring charge of \$3.6 million in the first quarter of 2009, and anticipate recording additional charges of between \$4.0 and \$6.0 million in the second quarter of 2009.

Termination benefits relate to severance and benefit costs associated with our decision to implement a reduction of approximately 70% of our workforce, primarily in functions related to the Trizytek program as well as certain general and administrative positions. The employees were informed of the decision on January 26, 2009 and, after a statutory waiting period, 93 employees were terminated on March 27, 2009. We recorded a restructuring charge of \$3.4 million in the first quarter of 2009 related to severance and related benefits, and anticipate recording an additional charge of \$0.1 million in the second quarter of 2009 when three remaining employees are terminated. Virtually all of the severance benefits will be paid out by the end of 2009.

Other charges relate primarily to legal and other professional fees associated with terminating our strategic alliance agreement with CFFTI for the development of Trizytek and entering into a new license arrangement with CFFTI for the Trizytek program.

We anticipate further restructuring charges of between \$4.0 and \$6.0 million in the second quarter of 2009, primarily related to our plan to vacate an office facility in Waltham, Massachusetts. We account for restructuring charges in accordance with Statement of Financial Accounting Standard No. 146, Accounting for Costs Associated with Exit or Disposal Activities, or SFAS 146. SFAS 146 requires that a liability for a cost associated with an exit or disposal activity be recognized and measured initially at its fair value in the period in which the liability is incurred, except for one-time termination benefits that meet specific requirements. In accordance with SFAS 146, our facility related expense and liability to be recorded in the second quarter will include an estimate of the remaining rental obligation, net of estimated sublease income, for a facility we intend to vacate in the second quarter of 2009.

Table of Contents*Other income (expense) net*

| | Three Months Ended March 31, | | Increase (Decrease) | |
|---------------------------------------|---|-------------|----------------------------|----------|
| | 2009 | 2008 | \$ | % |
| | (dollars in thousands) | | | |
| Interest income | \$ 165 | \$ 1,399 | \$ (1,234) | (88%) |
| Interest expense | (272) | (352) | 80 | 23% |
| Foreign currency exchange gain (loss) | 530 | (825) | 1,355 | 164% |
| Total other income (expense) net | \$ 423 | \$ 222 | \$ 201 | 91% |

Interest income for the three months ended March 31, 2009 decreased as compared to the same period in 2008. Our average cash balances for the three months ended March 31, 2008 were higher than our average cash balances for the three months ended March 31, 2009, resulting in higher interest income during 2008. In addition, a decrease in prevailing interest rates in the overall market also contributed to lower interest income for the three months ended March 31, 2009. Interest expense for both periods consists of the accretion of non-cash interest expense on our obligation to Dr. Falk and interest on our secured equipment loan with Oxford Finance Corporation, or Oxford. On March 26, 2009, we prepaid the remaining balance of \$2.4 million of our secured equipment loan with Oxford. Foreign currency exchange gains (losses) primarily reflect foreign currency adjustments relating to our obligation to Dr. Falk, which is denominated in Euros.

Preferred stock dividends

Preferred stock dividends, which were \$56,000 for the three months ended March 31, 2009 and 2008, relate entirely to dividends on our redeemable preferred stock.

Liquidity and Capital Resources*Overview*

We have financed our operations since inception primarily through the sale of equity securities, payments from our collaborators, borrowings and capital lease financings and, prior to the middle of 2004, revenue from product sales.

Prior to September 2001, we received most of our funding from the issuance of equity and debt financing from Vertex Pharmaceuticals, Inc., including issuance of redeemable preferred stock and Series A Convertible Preferred Stock. From September 2001 through our initial public offering, we received funding of \$96.6 million by issuing Series B and Series C Convertible Preferred Stock. Upon our initial public offering in January 2006, the Series A, B and C Convertible Preferred Stock were converted, along with accrued but unpaid dividends, into shares of common stock. The outstanding redeemable preferred stock, which is not convertible into common stock, is redeemable, at the holder's option, on or after December 31, 2010, or by us at our option at any time. The liquidation preference of the redeemable preferred stock at March 31, 2009 was \$6.8 million and includes accrued but unpaid dividends on the redeemable preferred stock of \$2.3 million. Assuming we do not exercise our right to repurchase the redeemable preferred stock before December 31, 2010, the liquidation preference including accrued and unpaid dividends at that date will be \$7.2 million.

On January 31, 2006, we completed our initial public offering of 8,050,000 shares of common stock at a price of \$15.00 per share, resulting in net proceeds to us of approximately \$110.2 million.

Table of Contents

During April 2007, we completed a common stock offering in which we sold 6,518,830 shares of common stock at a price of \$14.75 per share, resulting in net proceeds to us of approximately \$89.9 million.

We received \$18.4 million from our former collaborative agreement with CFFTI. As a result of the termination of the Trizytek program in February 2009, we will not receive any additional milestone payments from CFFTI under the former collaborative agreement. However, in connection with our new license agreement with CFFTI, CFFTI will be obligated to pay us a percentage of any proceeds CFFTI realizes associated with any rights licensed or assigned to CFFTI under the license agreement.

We had received \$12.9 million from Dr. Falk since the inception of our collaborative agreement with Dr. Falk in December 2002. Effective June 6, 2007, Dr. Falk and we agreed to terminate our collaborative agreement, and we reacquired Dr. Falk's European Marketing Rights under the agreement. Based on the termination agreement, we agreed to make cash payments to Dr. Falk totaling 12.0 million, payable as follows: 5.0 million that was paid in July 2007 and equated to \$6.7 million based on foreign currency exchange rates at the time of payment, 2.0 million that was paid in June 2008 and equated to \$3.1 million based on foreign currency exchange rates at the time of payment, 2.0 million on June 6, 2009 and 3.0 million on June 6, 2010. Both parties are absolved from any further performance obligations under the original contract. On May 7, 2009, we entered into an agreement with Dr. Falk to make a cash payment of 1.8 million in May 2009 in full settlement of our remaining financial obligation.

Pursuant to our collaboration and license agreement with Genentech, we received a total of \$41.5 million from Genentech in 2007 through 2008 which was comprised of an equity investment, an upfront milestone payment and cost reimbursements. In addition, as part of the termination agreement, we received a \$4.0 million termination payment from Genentech in the fourth quarter of 2007. Upon commercialization of ALTU-238, Genentech will be entitled to a nominal royalty on sales of ALTU-238.

On January 26, 2009, we announced a strategic realignment to focus on the advancement of ALTU-238 and to discontinue our activities in support of Trizytek. In connection with the realignment plan, we recorded a restructuring charge of \$3.6 in the first quarter of 2009, and anticipate recording an additional charge of between \$6.0 and \$7.0 million in the second quarter of 2009.

On March 27, 2009, we provided notice to Lonza of our intent to terminate the Agreement between us and Lonza due to Lonza's material breach of the Agreement. The notice identifies the material breach as Lonza's failure to meet the requirements of the Agreement with respect to the production of validation batches of APIs for Trizytek. Per the terms of the Agreement, we would not owe Lonza any termination fee as a result of terminating the contract due to Lonza's material breach. Before we delivered the notice of our intent to terminate the Agreement due to Lonza's breach, Lonza asserted that we had unilaterally terminated the Agreement, without notice. The Agreement permits us to terminate the Agreement for convenience with 12 months prior written notice if we stop development of Trizytek and obligates us to make a termination payment of a specified amount to Lonza after the 12 month notice period less the cost of any APIs we have purchased from Lonza over a certain period of time. The specified payment is 8.3 million Swiss francs, or \$7.2 million based on current exchange rates. We responded to Lonza asserting that we have not terminated the Agreement for convenience. After receiving our response, Lonza stated that if the specified payment was not paid by April 3, 2009, Lonza would initiate Arbitration. Lonza also asserts that, per the terms of the Agreement, they are owed interest charges of approximately \$50,000 per month beginning on January 1, 2009 because we have not taken delivery of a specified value of APIs. We believe that as a result of Lonza's material breach, no termination fees or interest charges are due to Lonza under the terms of the Agreement and, accordingly, no provisions have been made for such payments at March 31, 2009.

Table of Contents*Funding Requirements*

Since our inception, we have generated significant losses while we have advanced our product candidates into preclinical and clinical trials. As we continue to advance ALTU-238 and any of our other product candidates through development, we expect to incur additional operating losses until such time, if any, as our efforts result in commercially viable and profitable drug products. In January 2009, we announced a realignment plan to discontinue development of Trizyte and to reduce headcount by 70% in order to conserve our financial resources for the development of ALTU-238 and any other products we may develop. We anticipate that after the impact of our restructuring actions, our current cash, cash equivalents and marketable securities will be sufficient to fund our operations into the third quarter of 2009. We will require significant additional funding to remain a going concern and to fund operations until such time, if ever, we become profitable. Raising sufficient capital in the current financial environment may be particularly difficult, and there can be no assurance that additional financing will be available on acceptable terms when needed, if at all. In addition to equity financing, we continue to evaluate and aggressively pursue other forms of capital infusion including collaborations with organizations that have capabilities that are complementary to our own, as well as program structured financing arrangements, in order to continue the development of our product candidates.

We believe the key factors that will affect our internal and external sources of cash are:

the success of clinical trials for ALTU-238;

our ability to successfully develop, manufacture and obtain regulatory approval for ALTU-238;

the success of the ALTU-237 program or any preclinical programs that we determine to move forward;

our ability to enter into strategic collaborations with corporate collaborators and the success of such collaborations;

the receptivity of the capital markets to financings of biotechnology companies;

the final outcome of our disagreement with Lonza concerning the termination of our manufacturing agreement; and

our ability to sublet our excess facilities on favorable terms.

We may raise funds from time to time through public or private sales of equity or from borrowings. Financing may not be available on acceptable terms, or at all, and our failure to raise capital when needed could materially adversely impact our ability to continue as a going concern. Additional equity financing may be dilutive to the holders of our common stock and debt financing, if available, may involve significant cash payment obligations and covenants that restrict our ability to operate our business. For example, warrants issued in connection with our Series C financings contain price protection provisions that reduce the exercise price of the warrants in the event we issue equity securities at a lower price than the original exercise price, thus furthering dilution. At March 31, 2009, 1,133,112 such warrants with an exercise price of \$9.80 per warrant were outstanding. We do not engage in off-balance sheet financing arrangements, other than operating leases.

Summary Cash Flow Information

| | March 31, | December | Increase (Decrease) | |
|--|-------------------------------|-----------------|----------------------------|----------|
| | 2009 | 31, | \$ | % |
| | (dollars in thousands) | | | |
| Cash, cash equivalents and marketable securities | \$24,999 | \$ 48,600 | \$(23,601) | (49%) |
| Working capital | 11,678 | 34,429 | (22,751) | (66%) |

-22-

Table of Contents

| | Three Months Ended March 31, | |
|----------------------|---|-------------|
| | 2009 | 2008 |
| | (dollars in thousands) | |
| Cash flows from: | | |
| Operating activities | \$ (20,582) | \$ (21,611) |
| Investing activities | 6,981 | 12,858 |
| Financing activities | (2,745) | 2,110 |

At March 31, 2009, we had \$25.0 million in cash, cash equivalents and marketable securities. The composition and mix of cash, cash equivalents and marketable securities may change frequently as a result of our evaluation of conditions in the financial markets, the maturity of specific investments, and our near term liquidity needs. Our funds at March 31, 2009 were invested in investment grade securities and money market funds.

Cash flows from operating activities. Since our inception, we have generated significant losses while we have advanced our product candidates into preclinical and clinical trials. Accordingly, we have historically used cash in our operating activities. During the three months ended March 31, 2009 and March 31, 2008, our operating activities used \$20.6 million and \$21.6 million, respectively. The use of cash in each period was primarily a result of expenditures associated with our research and development activities and amounts incurred to develop and maintain our administrative infrastructure.

Cash flows from investing activities. Net cash provided by investing activities was \$7.0 million for the three months ended March 31, 2009, reflecting \$16.0 million of proceeds from sales and maturities of marketable securities, partially offset by \$8.9 million to purchase marketable securities and \$0.1 million for capital expenditures. During the same period in 2008, net cash provided by investing activities was \$12.9 million for the three months ended March 31, 2008, reflecting \$16.2 million of proceeds from the maturities of marketable securities, partially offset by \$2.7 million to purchase marketable securities and \$0.7 million for capital expenditures. We expect capital expenditures to be negligible in 2009.

Cash Flows from financing activities. For the three months ended March 31, 2009, our financing activities consumed \$2.8 million, due to debt principal repayments which reflects the full repayment of all outstanding long-term debt. For the three months ended March 31, 2008, our financing activities provided \$2.1 million, primarily reflecting \$2.5 million of proceeds from the issuance of long-term debt under our equipment financing agreement, partially offset by repayments of long-term debt of \$0.5 million. In addition, we received \$0.2 million in proceeds from the exercise of common stock options.

Table of Contents

The following table summarizes our contractual obligations at March 31, 2009 and the effects such obligations are expected to have on our liquidity and cash flows in future periods:

Payments Due by Period**(dollars in thousands)**

| | Total | Remainder of 2009 | 2010 through 2011 | 2012 through 2013 | After 2013 |
|------------------------------------|--------------|----------------------------------|----------------------------------|----------------------------------|-----------------------|
| Contractual Obligations (1): | | | | | |
| Operating lease obligations | \$ 46,678 | \$ 3,088 | \$ 9,265 | \$ 9,417 | \$ 24,908 |
| Dr. Falk obligation (2) | 6,604 | 2,642 | 3,962 | | |
| Purchase obligations (3) (4) | 5,554 | 3,325 | 2,229 | | |
| Total contractual cash obligations | \$ 58,836 | \$ 9,055 | \$ 15,456 | \$ 9,417 | \$ 24,908 |

(1) Excludes estimated payment of \$7.2 million to Vertex in connection with its optional redemption of shares of redeemable preferred stock on or after December 31, 2010, plus dividends accruing after that date and royalties to Genentech on product sales of ALTU-238. In addition, on March 26, 2009, we prepaid the remaining balance of \$2,406 of our existing secured equipment loan with Oxford.

(2) Represents 5.0 million due

to Dr. Falk converted to U.S. dollars at the foreign exchange rate at March 31, 2009. On May 7, 2009, we entered into an agreement with Dr. Falk to make a cash payment of 1.8 million in May 2009 in full settlement of our remaining financial obligation.

- (3) Represents amounts due to Sandoz based on the foreign currency exchange rate at March 31, 2009, under the terms of our supply agreement with Sandoz pursuant to which we are obligated to purchase all of the recombinant human growth hormone, or hGH, forecasted for 2009 and 50% of the hGH forecasted for 2010.
- (4) Excludes an approximate \$7.2 million termination fee that Lonza contends we owe related to our unilateral

termination of
our
Manufacturing
and Supply
agreement for
convenience.
We refute this
contention and
believe that as a
result of Lonza's
material breach,
no termination
fee is owed
under the terms
of the
agreement.

Forward-Looking Statements and Risk Factors

This report contains forward-looking statements. The forward-looking statements include statements about the time period during which existing cash resources can support our operations, our ability to raise additional capital, the possibility of future revenues, the impact of our realignment activities on future use of cash, the financial impact of changes in interest rates, and other statements regarding our plans, estimates and beliefs. These statements involve known and unknown risks, uncertainties and other factors which may cause our actual results, performance or achievements to be materially different from any future results, performances or achievements expressed or implied by the forward-looking statements. Because of these risks and uncertainties, the forward-looking events and circumstances discussed in this report may not transpire. We discuss many of these risks in Part II Item 1A of this Quarterly Report on Form 10-Q and in our Annual Report on Form 10-K for the year ended December 31, 2008 under the heading Risk Factors. In some cases, you can identify forward-looking statements by terms such as anticipate, believe, could, estimate, expect, intend, may, plan, potential, predict, project, should, will, expressions intended to identify forward-looking statements.

Given these uncertainties, you should not place undue reliance on these forward-looking statements. Also, forward-looking statements speak only as of the date of this Quarterly Report. You should read this Quarterly Report with the understanding that our actual future results may be materially different. Except as required by law, we do not undertake any obligation to update or revise any forward-looking statements contained in this Quarterly Report, whether as a result of new information, future events or otherwise.

Table of Contents

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Our cash, cash equivalents and marketable securities are invested with highly-rated financial institutions in North America with the primary objective of preservation of principal. When purchased, the investments generally have a maturity of less than 18 months. Some of the securities we invest in are subject to interest rate risk and will fall in value if market interest rates increase. To minimize the risk associated with changing interest rates, we invest primarily in money market funds, bank certificates of deposit, United States government securities and investment-grade commercial paper and corporate notes that can be held to their maturity date. All of our investments at March 31, 2009 met these criteria. We had gross unrealized gains of \$0.1 million on our investments at March 31, 2009. If market interest rates were to increase immediately and uniformly by 10% from levels at March 31, 2009, we estimate that the fair value of our investment portfolio would decline by an immaterial amount.

Our assets are principally located in the United States and a majority of our historical revenues and operating expenses are denominated in United States dollars. Our payments to Dr. Falk for the repurchase of the European Marketing Rights of Trizytek are denominated in Euros. In addition, some purchases of raw materials and contract manufacturing services are also denominated in foreign currencies. Accordingly, we are subject to market risk with respect to foreign currency-denominated expenses. We recognized foreign currency exchange gains of \$0.5 million in the three months ended March 31, 2009. We may engage in additional collaborations with international partners. If we enter into additional collaborations with international partners providing for foreign currency-denominated revenues and expenses, we may be subject to significant foreign currency and market risk.

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Our management, with the participation of our Chief Executive Officer, or CEO, and Principal Financial Officer, or PFO, evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934) as of March 31, 2009. In designing and evaluating our disclosure controls and procedures, our management recognized that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving their objectives, and our management necessarily applied its judgment in evaluating the cost-benefit relationship of possible controls and procedures. Based on the evaluation by our management, our CEO and PFO concluded that, as of March 31, 2009, our disclosure controls and procedures were: (1) designed to ensure that material information relating to us is made known to our CEO and PFO by others within the Company, particularly during the period in which this report was being prepared and (2) effective, in that they provide reasonable assurance that information required to be disclosed by us in reports that we file or submit under the Securities Exchange Act of 1934, as amended, or the Exchange Act, is recorded, processed, summarized, and reported within the time periods specified in the Securities and Exchange Commission's rules and forms and that such information is accumulated and communicated to management as appropriate to allow timely decisions regarding required disclosures.

Changes in Internal Control

Based on an evaluation by management, no change in our internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) occurred during the fiscal quarter ended March 31, 2009 that materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Table of Contents

PART II OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

We are not a party to any material legal proceedings.

ITEM 1A. RISK FACTORS

Our business is subject to numerous risks. We cannot assure investors that our assumptions and expectations about our business will prove to have been correct. Important factors could cause our actual results to differ materially from those indicated or implied by forward-looking statements. Such factors that could cause or contribute to such differences include those factors discussed below.

Our existing and potential stockholders should consider carefully the risks described below and the other information in this Quarterly Report, including under the heading **Forward-Looking Statements and Risk Factors**, our **Management's Discussion and Analysis of Financial Condition and Results of Operations** and our condensed consolidated financial statements and the related notes. We may be unable, for many reasons, including those that are beyond our control, to implement our current business strategy. The following risks may result in material harm to our business, our financial condition and our results of operations. In that event, the market price of our common stock could decline.

Except as required by law, we do not undertake any obligation to update or revise any forward-looking statements contained in this Quarterly Report, whether as a result of new information, future events, or otherwise.

Risks Related to Our Business and Strategy

If we fail to obtain the additional capital necessary to fund our operations, we will be unable either to successfully develop and commercialize our product candidates or to finance the discovery and development of our next generation of product candidates.

Due to financial constraints, we recently discontinued development of Trizytek, our late-stage clinical candidate. We will require substantial future capital in order to complete the development and commercialization of our remaining clinical-stage product candidates, ALTU-238 and ALTU-237, and to conduct the research and development and clinical and regulatory activities necessary to bring our early stage research products and product candidates into clinical development. At this time, we have made a decision to allocate our financial, capital and human resources to ALTU-238, are evaluating the feasibility of moving forward our early-stage clinical and pre-clinical programs and will make future decisions on these programs depending upon the availability of resources. Our future capital requirements will depend on many factors, including:

- the results of our Phase II pediatric clinical trial for ALTU-238 that we initiated in March 2009 and the results and costs of future clinical trials for ALTU-238 that we may initiate;
- any further non-clinical or clinical studies we may initiate based on the results of our Phase I clinical trial for ALTU-237 or discussions with regulatory authorities;

- the actual expenses of discontinuing the Trizytek program, including any

Table of Contents

contractual termination payments we are required to make;
the timing, progress and results of ongoing manufacturing development work for ALTU-238;

the results of our preclinical studies and testing for our early stage research products and product candidates, and any decisions to initiate clinical trials;

the costs, timing and outcome of regulatory review of our product candidates in clinical development, and any of our preclinical product candidates that progress to clinical trials;

the cost of obtaining clinical and commercial supplies of active pharmaceutical ingredients, or APIs, and finished drug product in sufficient quantities for clinical development and any commercial launch;

the costs of establishing commercial operations, including commercial manufacturing and distribution arrangements and sales, marketing and medical affairs functions, should any of our product candidates be approved and we participate in the launch;

the costs of preparing, filing and prosecuting patent applications, maintaining and enforcing our issued patents, seeking freedom to operate under any third party intellectual property rights, and defending intellectual property-related claims;

our ability to establish and maintain collaborative or financing arrangements and obtain milestone, royalty and other payments from collaborators or third parties;

the costs associated with our realignment plan, including termination of contractual obligations and facility-related costs; and

the extent to which we acquire or invest in new businesses, products or technologies.

Additional funds may not be available when we need them on terms that are acceptable to us, or at all. If adequate funds are not available to us on a timely basis, or we decide it is necessary to preserve existing resources, we may find it appropriate or necessary to stage, delay or terminate preclinical studies, clinical trials or other development activities for one or more of our product candidates.

Our independent registered public accounting firm modified their report for the fiscal year ended December 31, 2008 with respect to our ability to continue as a going concern. This type of modification typically would indicate that our recurring losses from operations and current lack of sufficient funds to sustain operations through the end of the following fiscal year raise substantial doubt about our ability to continue as a going concern. Our consolidated financial statements have been prepared on the basis of a going concern, which contemplates the realization of assets and the satisfaction of liabilities in the normal course of business. If we became unable to continue as a going concern, we would have to liquidate our assets and might receive significantly less than the values at which they are carried on our consolidated financial statements. Any shortfall in the proceeds from the liquidation of our assets would directly reduce the amounts, if any, that holders of our common stock could receive in liquidation.

Table of Contents

To remain a going concern, significant funding will be required. Our available funds will not be sufficient to fund the completion of the development and commercialization of any of our product candidates, including ALTU-238. We currently expect that our existing capital resources will be sufficient to maintain our current and planned operations into the third quarter of 2009. In addition, our operating plan may change as a result of many factors, including factors currently unknown to us, and we may need additional funds sooner than the third quarter of 2009 and may seek such funds prior to that time. We are funding all costs related to the development ALTU-238 and cannot defer or avoid such expenses unless we delay or curtail the program, or we enter into a new collaboration agreement or secure alternative funding to support the development of ALTU-238. The failure to obtain additional financing or enter into a new collaboration could lead to a delay in or discontinuation of further development of ALTU-238. The inclusion of a going concern modification in the audit report of our registered public accounting firm for fiscal 2008 may materially and adversely affect our ability to raise new capital.

We are obligated under the terms of our redeemable preferred stock held by Vertex Pharmaceuticals Incorporated to make a significant payment upon the occurrence of a specified event. We may not have sufficient resources to make this payment when it becomes due.

If Vertex Pharmaceuticals Incorporated, or Vertex, the holder of our redeemable preferred stock, elects to redeem those shares on or after December 31, 2010, we will be required to pay an aggregate of \$7.2 million plus dividends accrued after that date. We will require additional funding to make this payment. Funds for this purpose may not be available to us on favorable terms, or at all.

We may have contractual liabilities in connection with our discontinuation of the Trizyte program.

We have significant contractual obligations that we entered into with third parties for the Trizyte program. In connection with our discontinuation of this program and our new License Agreement with CFFTI, CFFTI may assume certain, but not all, of these obligations. In the case where CFFTI does not assume these obligations, we will need to negotiate a termination of these obligations with the third parties, which may involve the payment of termination fees or costs. In particular, in March 2009 we provided notice to Lonza of our intent to terminate our manufacturing and supply agreement (the Manufacturing Agreement) with Lonza due to Lonza's material breach of the Agreement. Lonza has asserted that we have terminated the Manufacturing Agreement for convenience without notice. We have responded to Lonza asserting that we have not terminated the Agreement for convenience noting that the applicable provision of the Manufacturing Agreement permits us only and not Lonza to terminate the Agreement. After receiving our response, Lonza stated that if the specified payment was not made by April 3, 2009, Lonza would initiate arbitration. The settlement or arbitration of this matter could involve the payment of substantial amounts by us.

We have a history of net losses, which we expect to continue for at least several years and, as a result, we are unable to predict the extent of any future losses or when, if ever, we will achieve, or be able to maintain, profitability.

We have incurred significant losses since 1999, when we were reorganized as a company independent from Vertex. At March 31, 2009, our accumulated deficit was \$356.3 million, and we expect to continue to incur losses for at least the next several years. We have only been able to generate limited amounts of revenue from license and milestone payments under collaboration agreements and payments for funded research and development, as well as revenue from products we no longer sell. Although our realignment of operations to focus on the development of ALTU-238 will result in a reduction in our annual research and development spending, we expect to continue to incur net operating losses for the next several years.

Table of Contents

We must generate significant revenue to achieve and maintain profitability. All of our product candidates are still in development. Even if we succeed in developing and commercializing one or more of our product candidates, we may not be able to generate sufficient revenue to achieve or maintain profitability. Our failure to become and remain profitable would further depress the market price of our common stock and could impair our ability to raise capital, expand our business, diversify our product offerings or continue our operations.

Raising additional capital by issuing securities or through collaboration and licensing arrangements may cause dilution to existing stockholders, restrict our operations or require us to relinquish proprietary rights.

We may seek the additional capital necessary to fund our operations through public or private equity offerings, debt financings, or collaboration and licensing arrangements. To the extent that we raise additional capital through the sale of equity or convertible debt securities, existing stock ownership interests will be diluted, such dilution will in all likelihood be substantial, and the terms of such securities may include liquidation or other preferences that adversely affect the rights of our existing stockholders. In addition, certain warrants that we have issued contain price protection provisions that reduce the exercise price of the warrants in the event we issue equity securities at a lower price than the original exercise price, thus furthering dilution. At March 31, 2009, we had 1,133,112 such warrants. Debt financing, if available, may involve agreements that include covenants limiting or restricting our ability to take actions such as incurring additional debt, making capital expenditures or declaring dividends. If we raise additional funds through collaboration and licensing arrangements with third parties, we may have to relinquish valuable development and commercialization rights to our technologies or product candidates, or grant licenses on terms that are not favorable to us.

In order to fund our operations in the future, we may need to comply with NASDAQ Marketplace Rules that require stockholder approval of certain financings, which may limit our ability to raise sufficient capital.

The NASDAQ Marketplace Rules require us to obtain stockholder approval under certain circumstances if we issue outstanding equity securities that would comprise more than 20% of our total shares of common stock outstanding before the issuance of the securities. In order to fund our operations in the future, we may need to obtain stockholder approval in order to comply with these rules, and we may not be successful in obtaining any such stockholder approval. If we failed to obtain such an approval prior to a financing, our funding options would be limited, which would adversely affect our ability to successfully develop and commercialize our product candidates or to finance the discovery and development of our next generation of product candidates.

Our competitors may develop products that are less expensive, safer or more effective, which may diminish or prevent the commercial success of any product candidate that we bring to market.

Competition in the pharmaceutical and biotechnology industries is intense. We face competition from pharmaceutical and biotechnology companies, as well as numerous academic and research institutions and governmental agencies engaged in drug discovery activities, both in the United States and abroad. Some of these competitors have greater financial resources than we do, greater experience in research and development, manufacturing, preclinical testing, conducting clinical trials, obtaining regulatory approvals and marketing than we do, and have products or are pursuing the development of product candidates that target the same diseases and conditions that are the focus of our drug development programs, including those set forth below.

ALTU-238. If approved, ALTU-238, the product candidate we are developing as a once-weekly treatment for human growth hormone, or hGH, deficiency and related disorders, will compete with existing approved hGH therapies from

Table of Contents

companies such as BioPartners, Eli Lilly, Genentech, Merck Serono, Novo Nordisk, Pfizer, Sandoz, and Teva Pharmaceutical Industries. In addition, we understand that ALTU-238 may compete with product candidates in clinical development from some of these companies and others, including LG Life Sciences, which is developing a long-acting hGH therapy based on an encapsulated microparticle technology, and Merck Serono and Novo Nordisk, which are also developing a long-acting hGH therapy.

ALTU-237. If approved, ALTU-237, the product candidate we may further develop for the treatment of hyperoxalurias, depending on the availability of funding, may compete with product candidates in development at companies such as Amsterdam Molecular Therapeutics, Medix, NephroGenex, and OxThera.

We may not be successful in establishing and maintaining collaborations on acceptable terms, which could adversely affect our ability to develop and commercialize our products.

An element of our business strategy is to establish collaborative arrangements with third parties with regard to development, regulatory approval, sales, marketing and distribution of our products. We may collaborate with other companies to accelerate the development of some of our early-stage product candidates, to develop and commercialize or co-commercialize our more mature product candidates or to advance other business objectives. The process of establishing new collaborative relationships is difficult, time-consuming and involves significant uncertainty. We face, and will continue to face, significant competition in seeking appropriate collaborators. Moreover, if we do establish collaborative relationships, our collaborators may fail to fulfill their responsibilities or seek to renegotiate or terminate their relationships with us due to unsatisfactory clinical results, a change in business strategy, a change of control or other reasons. In the event of a termination, we may incur termination payments or other expenses in connection with any reacquisition of rights. For example, in connection with the termination of our collaboration with Genentech for ALTU-238, we became solely responsible for all expenses in connection with the ALTU-238 program. If we are unable to establish and maintain collaborative relationships on acceptable terms, we may have to delay or discontinue further development of one or more of our product candidates, undertake development and commercialization activities at our own expense or find alternative sources of funding.

If we enter into new collaborative agreements, our collaborators and we may not achieve our projected research and development goals in the time frames we announce and expect, which could have an adverse impact on our business and could cause our stock price to decline.

If we enter into new collaborative agreements for our product candidates, we expect to set goals for and make public statements regarding the timing of activities, such as the commencement and completion of preclinical studies and clinical trials, anticipated regulatory approval dates and developments and milestones under those collaboration agreements. The actual timing of such events can vary dramatically due to a number of factors such as delays or failures in our or our collaborators' preclinical studies or clinical trials, delays or failures in manufacturing process development activities or in manufacturing product candidates, the amount of time, effort and resources to be committed to our programs by our future collaborators, delays in filing for regulatory approval, and the uncertainties inherent in the regulatory approval process, including delays in obtaining regulatory approval. We cannot be certain that our or our collaborators' preclinical studies and clinical trials will advance or be completed in the time frames we announce or expect, that our collaborators or we will make regulatory submissions or receive regulatory approvals as planned or that our collaborators or we will be able to adhere to our current schedule for the achievement of key milestones under any of our internal or collaborative programs. If our collaborators or we fail to achieve one or more of these milestones as planned, our business will be materially adversely affected and the price of our common stock could decline.

Table of Contents

Risks Related to Development of Our Product Candidates

If we, or if we enter into future collaborative agreements, our collaborators, are unable to commercialize our lead product candidates, or experience significant delays in doing so, our business will be materially harmed.

We have invested a significant portion of our time and financial resources to date in the development of oral and injectable crystallized protein therapies, including Trizytek (for which we have discontinued development), ALTU-238 and ALTU-237 (the development of which is on hold until sufficient additional funding can be secured), for the treatment of gastrointestinal and metabolic disorders. Our ability and the ability of a collaborative partner to develop and commercialize our current product candidates successfully, and therefore our ability to generate revenues, will depend on numerous factors, including:

successfully scaling up the manufacturing processes for our product candidates, successfully completing stability testing and release of our product candidates, and obtaining sufficient supplies of, our product candidates, in order to complete our clinical trials and toxicology studies on a timely basis;

receiving marketing approvals from the FDA and foreign regulatory authorities;

arranging for commercial-scale supplies of our product candidates with contract manufacturers whose manufacturing facilities operate in compliance with current good manufacturing practice regulations, or cGMPs, including the need to scale up the manufacturing process for commercial scale supplies;

establishing sales, marketing and distribution capabilities on our own, through collaborative agreements or through third parties;

obtaining commercial acceptance of our product candidates, if approved, in the medical community and by third-party payors and government pricing authorities; and

establishing favorable pricing from foreign regulatory authorities.

If we are not successful in commercializing ALTU-238 or are significantly delayed in doing so, our business will be materially harmed.

Because our product candidates are in clinical development, there is a significant risk of failure.

Of the large number of drugs in development, only a small percentage result in the submission of an NDA to the FDA, and even fewer are approved for commercialization. We will only receive regulatory approval to commercialize a product candidate if we can demonstrate to the satisfaction of the FDA or the applicable foreign regulatory authority, in well-designed and controlled clinical trials, that the product candidate is safe and effective and otherwise meets the appropriate standards required for approval for a particular indication. Clinical trials are lengthy, complex and extremely expensive programs with

Table of Contents

uncertain results. A failure of one or more of our clinical trials may occur at any stage of testing. We have limited experience in conducting and managing the clinical trials necessary to obtain regulatory approvals, including approval by the FDA.

A number of events or factors, including any of the following, could delay the completion of our ongoing and planned clinical trials and negatively impact our ability to submit an NDA and obtain regulatory approval for, and to market and sell, a particular product candidate, including our clinical-stage product candidates:

unavailability of funds;

conditions imposed by us or imposed on us by the FDA or any foreign regulatory authority regarding the scope or design of our clinical trials;

delays in obtaining, or our inability to obtain or maintain, required approvals from institutional review boards, or IRBs, or other reviewing entities at clinical sites selected for participation in our clinical trials;

negative or inconclusive results from clinical trials, or results that are inconsistent with earlier results, that necessitate additional clinical studies;

delays in the completion of manufacturing development work for our product candidates, and in collecting the necessary manufacturing information for submission of our marketing approval applications for our product candidates;

any dispute that arises under our current or future collaborative agreements or our agreements with third parties;

insufficient supply or deficient quality of our product candidates or other materials necessary to conduct our clinical trials;

difficulties enrolling subjects in our clinical trials, including, for example, finding pediatric subjects with hGH deficiency who have not previously received hGH therapy for our pediatric trials of ALTU-238;

serious or unexpected side effects experienced by subjects in clinical trials; or

failure of our third-party contractors or our investigators to comply with regulatory requirements or otherwise meet their contractual obligations to us in a timely manner.

Delays in or inconclusive results from our clinical trials may result in increased development costs for our product candidates and corresponding delays in the filing of an NDA for product candidates and the receipt of marketing approval for the product candidate or discontinuation of a program, which could cause our stock price to decline and could limit our ability to obtain additional financing. For example, our stock price declined significantly following the announcement of the results of our Phase III clinical trial for Trizytek. In addition, we were unable to secure a corporate partnership for Trizytek following the announcement of such results and consequently decided to discontinue the Trizytek program which is now exclusively licensed to CFFTI. In addition, if one or more of our product candidates are delayed, our competitors may be able to bring products to market before we do, and the commercial advantage, profitability or viability of our product candidates, including our clinical-stage product candidates, could be significantly reduced.

Table of Contents

We have not yet completed a full Phase III program for any of our product candidates in clinical development, other than for the Trizytek program, which was discontinued in January 2009, and we have not advanced, and may never advance, our product candidates that are currently in preclinical testing into clinical trials. Even if our trials are successful, we may still be required or may determine it is desirable to perform additional studies for approval or in order to achieve a broad indication for the labeling of the drug.

For the ALTU-238 program, we have completed Phase I clinical trials in healthy adults and a Phase II clinical trial in adults with hGH deficiency and have commenced a Phase II clinical trial in children with hGH deficiency. The efficacy of ALTU-238 has not yet been tested in a human clinical trial, and ALTU-238 may prove not to be clinically effective as an extended-release formulation of hGH. In addition, it is possible that patients receiving ALTU-238 will suffer additional or more severe side effects than we observed in our earlier Phase I and Phase II clinical trials, which could delay or preclude regulatory approval of ALTU-238 or limit its commercial use.

If we observe serious or other adverse events during the time our product candidates are in development or after our products are approved and on the market, we may be required to perform lengthy additional clinical trials, may be denied regulatory approval of such products, may be forced to change the labeling of such products or may be required to withdraw any such products from the market, any of which would hinder or preclude our ability to generate revenues.

As our clinical trials progress or increase in size or the medical conditions of the population in which we are testing our products vary, the potential for serious or other adverse events related or unrelated to our product candidates could vary and possibly increase. If the incidence of these events increases in number or severity, if a regulatory authority believes that these events constitute an adverse effect caused by the drug, or if other effects are identified either during future clinical trials or after any of our drug candidates are approved and on the market:

we may be required to conduct additional preclinical or clinical trials, make changes in clinical trial brochures or, if a product is approved, make changes to the labeling of any such products, reformulate any such products, or implement changes to or obtain new approvals of our or our contractors or collaborators manufacturing facilities or processes;

regulatory authorities may be unwilling to approve our product candidates or may withdraw approval of our products;

we may experience a significant drop in the sales of the affected products;

our reputation in the marketplace may suffer; and

we may become the target of lawsuits, including class action suits.

Any of these events could prevent approval or harm sales of the affected products or could substantially increase the costs and expenses of commercializing and marketing any such products.

Table of Contents

We may fail to select or capitalize on the most scientifically, clinically or commercially promising or profitable indications or therapeutic areas for our product candidates.

We have limited technical, managerial and financial resources to determine the indications on which we should focus the development efforts related to our product candidates. We may make incorrect determinations. Our decisions to allocate our research, management and financial resources toward particular indications or therapeutic areas for our product candidates may not lead to the development of viable commercial products and may divert resources from better opportunities. Similarly, our decisions to delay or terminate drug development programs may also be incorrect and could cause us to miss valuable opportunities. For example, we have made a decision to allocate substantially all of our existing financial, capital and human resources to ALTU-238, and are evaluating the feasibility of moving forward our early-stage clinical and pre-clinical programs and will make future decisions on these programs depending upon the availability of resources. If we invest in the advancement of a candidate that proves not to be viable, we will have fewer resources available for potentially more promising candidates.

Risks Related to Regulatory Approval of Our Product Candidates and Other Government Regulations

If we or our future collaborators do not obtain required regulatory approvals, we will be unable to commercialize our product candidates, and our ability to generate revenue will be materially impaired.

ALTU-238, ALTU-237 and any other product candidates we may discover or acquire and seek to commercialize, either alone or in conjunction with a collaborator, are subject to extensive regulation by the FDA and other regulatory authorities in the United States and other countries relating to the testing, manufacture, safety, efficacy, recordkeeping, labeling, packaging, storage, approval, advertising, promotion, sale and distribution of drugs. In the United States and in many foreign jurisdictions, we must successfully complete rigorous preclinical testing and clinical trials and an extensive regulatory review process before a new drug can be sold. We have not obtained regulatory approval for any product. Satisfaction of these and other regulatory requirements is costly, time consuming, uncertain and subject to unanticipated delays.

The time required to obtain approval by the FDA is unpredictable but typically takes many years following the commencement of clinical trials, depending upon numerous factors, including the complexity of the product candidate and the disease to be treated. Our product candidates may fail to receive regulatory approval for many reasons, including:

a failure to demonstrate to the satisfaction of the FDA or comparable foreign regulatory authorities that a product candidate is safe and effective for a particular indication;

the results of clinical trials may not meet the level of statistical significance required by the FDA or other regulatory authorities for approval;

an inability to demonstrate that a product candidate's benefits outweigh its risks;

an inability to demonstrate that the product candidate presents an advantage over existing therapies;

the FDA's or comparable foreign regulatory authorities' disagreement with the manner in which our collaborators or we interpret the data from preclinical studies or clinical trials;

Table of Contents

the FDA or comparable foreign regulatory authorities' failure to approve the manufacturing processes or facilities of third-party contract manufacturers of clinical and commercial supplies; and

a change in the approval policies or regulations of, or the specific advice provided to us by, the FDA or comparable foreign regulatory authorities or a change in the laws governing the approval process.

The FDA or comparable foreign regulatory authorities might decide that the data are insufficient for approval and require additional clinical trials or other studies. Furthermore, even if we do receive regulatory approval to market a commercial product, any such approval may be subject to limitations on the indicated uses for which our collaborative partner or we may market the product or may be subject to post-approval commitments to conduct Phase IV studies, patient monitoring or other risk management measures that could require significant financial resources. It is possible that none of our existing or future product candidates will ever obtain the appropriate regulatory approvals necessary for us or our collaborators to begin selling them.

Failure to obtain regulatory approvals or to comply with regulatory requirements in foreign jurisdictions would prevent us or any collaborator from marketing our products internationally.

We intend to have our product candidates marketed outside the United States. In order to market products in the European Union and many other non-United States jurisdictions, our collaborators or we must obtain separate regulatory approvals and comply with numerous and varying regulatory requirements. We have no experience in obtaining foreign regulatory approvals for our product candidates. The approval procedures vary among countries and can involve additional and costly preclinical and clinical testing and data review. The time required to obtain approval in other countries may differ from that required to obtain FDA approval. The foreign regulatory approval process may include all of the risks associated with obtaining FDA approval. Approval by the FDA does not ensure approval by regulatory authorities in other countries, and approval by one foreign regulatory authority does not ensure approval by regulatory authorities in other foreign countries or by the FDA. We also face challenges arising from the different regulatory requirements imposed by United States and foreign regulators with respect to clinical trials. The EMEA often imposes different requirements than the FDA with respect to the design of a pivotal Phase III clinical trial. Our future collaborators or we may not receive necessary approvals to commercialize our products in any market. The failure to obtain these approvals could harm our business and result in decreased revenues from the sale of products or from milestones or royalties associated with any collaboration agreements we may enter into in the future.

Our product candidates will remain subject to ongoing regulatory requirements even if they receive marketing approval, and if we fail to comply with these requirements, we could lose these approvals, and the sales of any approved commercial products could be suspended.

Even if we receive regulatory approval to market a particular product candidate, the product will remain subject to extensive regulatory requirements, including requirements relating to manufacturing, labeling, packaging, adverse event reporting, storage, advertising, promotion, distribution and record keeping. In addition, the approval may be subject to limitations on the uses for which the product may be marketed or to the conditions of approval, or contain requirements for costly post-marketing testing and surveillance to monitor the safety or efficacy of the product, which could reduce our revenues, increase our expenses and render the approved product candidate not commercially viable.

Table of Contents

In addition, as clinical experience with a drug increases after approval because it is typically used by a larger and more diverse group of patients after approval than during clinical trials, side effects and other problems may be observed after approval that were not seen or anticipated during pre-approval clinical trials or other studies. Any adverse effects observed after the approval and marketing of a product candidate could result in limitations on the use of or withdrawal of any approved products from the marketplace. Absence of long-term safety data may also limit the approved uses of our products, if any. If we fail to comply with the regulatory requirements of the FDA and other applicable United States and foreign regulatory authorities, or previously unknown problems with any approved commercial products, manufacturers or manufacturing processes are discovered, we could be subject to administrative or judicially imposed sanctions or other setbacks, including:

restrictions on the products, manufacturers or manufacturing processes;

warning letters;

civil or criminal penalties;

fines;

injunctions;

product seizures or detentions;

import or export bans or restrictions;

voluntary or mandatory product recalls and related publicity requirements;

suspension or withdrawal of regulatory approvals;

total or partial suspension of production; and

refusal to approve pending applications for marketing approval of new products or supplements to approved applications.

If we are slow to adapt, or are unable to adapt, to changes in existing regulatory requirements or adoption of new regulatory requirements or policies, we may lose marketing approval for our products when and if any of them are approved, resulting in decreased revenue from milestones, product sales or royalties. Moreover, even when a manufacturer has fully complied with applicable regulatory standards, products manufactured and distributed may ultimately fail to comply with applicable specifications, leading to product withdrawals or recalls.

We deal with hazardous materials and must comply with environmental laws and regulations, which can be expensive and restrict how we do business.

Our activities and those of our third-party manufacturers on our behalf involve the controlled storage, use and disposal of hazardous materials, including microbial agents, corrosive, explosive and flammable chemicals and other hazardous compounds. Our manufacturers and we are subject to federal, state and local laws and regulations governing the use, manufacture, storage, handling and disposal of these hazardous materials. Although we believe that the safety procedures for handling and disposing of these materials comply with the standards prescribed by these laws and regulations, we cannot eliminate the risk of accidental contamination or injury from these materials.

Table of Contents

In the event of an accident, state or federal authorities may curtail our use of these materials and interrupt our business operations. In addition, we could be liable for any resulting civil damages which may exceed our financial resources and may seriously harm our business. While we believe that the amount of insurance we currently carry, providing coverage of \$1.0 million, should be sufficient for typical risks regarding our handling of these materials, it may not be sufficient to cover pollution conditions or other extraordinary or unanticipated events. Furthermore, an accident could damage, or force us to shut down, our operations. In addition, if we develop manufacturing capability, we may incur substantial costs to comply with environmental regulations and would be subject to the risk of accidental contamination or injury from the use of hazardous materials in our manufacturing process.

Risks Related to Our Dependence on Third Parties

We have no manufacturing capacity, and we have relied and expect to continue to rely on third-party manufacturers to produce our product candidates.

We do not own or operate manufacturing facilities for the production of clinical or commercial quantities of our product candidates or any of the compounds that we are testing in our preclinical programs, and we lack the internal resources and the capabilities to do so. As a result, we currently rely, and we expect to rely in the future, on third-party manufacturers to supply the APIs for our product candidates and to produce and package final drug products, if and when they are approved for marketing. Reliance on third-party manufacturers entails risks to which we would not be subject if we manufactured product candidates or products ourselves, including:

reliance on the third party for manufacturing process development, sourcing of key raw materials and specialized manufacturing equipment, regulatory compliance and quality assurance;

limitations on supply availability resulting from capacity and scheduling constraints of the third party;

the possible breach of the manufacturing agreement by the third party because of factors beyond our control; and

the possible termination or non-renewal of the agreement by the third party, based on its own business priorities, at a time that is costly or inconvenient for us.

Our current and anticipated future dependence upon others for the manufacture of our product candidates may adversely affect our future profit margins and our ability to develop our product candidates and commercialize any products that receive regulatory approval on a timely basis.

We currently rely on a limited number of manufacturers for the clinical and commercial supply of each of our product candidates, which could delay or prevent the clinical development and commercialization of our product candidates.

We currently depend on single source suppliers for ALTU-238. Any disruption in production, inability of a supplier to produce adequate quantities of clinical and other material to meet our needs or other impediments could adversely affect our ability to successfully complete the clinical trials and other studies of our product candidates, delay submissions of our regulatory applications or adversely affect our ability to commercialize our product candidates in a timely manner, or at all.

Table of Contents

We have purchased the hGH, the API in ALTU-238, for our prior and ongoing clinical trials from Sandoz GmbH, or Sandoz. We have also produced ALTU-238 for these trials and believe that the current scale of manufacturing is sufficient to support the planned Phase III program for ALTU-238 in both adult and pediatric growth hormone deficient patients. In July 2008, Sandoz and we entered into a long term supply agreement, which has an initial term expiring in 2012, with an optional two year extension period. Because we do not have another long term supplier of hGH in place, any disruption in Sandoz's ability to supply us with hGH as needed would adversely affect the ALTU-238 program.

We have an agreement with Althea for Althea to use the hGH supplied to it to produce the clinical supplies for our planned clinical trials of ALTU-238. Any delay in the production, testing and release of ALTU-238 could delay our planned clinical trials and result in additional unforeseen expenses.

Our agreement with Althea covers only the manufacture of ALTU-238 for the planned clinical trials of ALTU-238. We will need to negotiate an additional agreement under which Althea would provide the commercial supply of ALTU-238 or find an alternative commercial manufacturer. Switching manufacturers would require cooperation from Althea, technology transfers, training, and validation of the alternative manufacturer's processes, and, under some circumstances, will require us to make a specified payment to Althea. Changes in manufacturing processes or procedures, including a change in the location where the drug is manufactured or a change of a third-party manufacturer, may require prior review and approval from the FDA and satisfaction of comparable foreign requirements. This review may be costly and time-consuming and could delay or prevent the launch of a product. If we are unable to secure another contract manufacturer for ALTU-238 at an acceptable cost, the commercialization of ALTU-238 could be delayed, prevented or impaired, and the costs related to ALTU-238 may increase. Any dispute over the terms of, or decisions regarding, our collaboration with Althea or other adverse developments in our relationship would materially harm our business and might accelerate our need for additional capital.

Our contract manufacturers may encounter difficulties or unforeseen expenses in connection with the commercial scale-up of manufacturing activities for our product candidates

We do not have any agreements in place to manufacture our product candidates on a commercial scale, other than the supply agreement for API for ALTU-238. In order to commercialize ALTU-238, we, in conjunction with Althea, will need to scale up the manufacturing of ALTU-238 drug product. We may be required to fund capital improvements to support scale-up of manufacturing and related activities. Althea may not be able to increase its manufacturing capacity and we may need to find an alternative supplier. In addition, Sandoz may discontinue its manufacturing of hGH, in which case we would need to find an alternative source. It may be difficult for us to enter into additional supply arrangements on a timely basis or on acceptable terms, which could delay or prevent our ability to commercialize ALTU-238.

Any performance failure on the part of a contract manufacturer could delay clinical development or regulatory approval of our product candidates or commercialization of any approved products.

The failure of a contract manufacturer to achieve and maintain high manufacturing standards could result in patient injury or death, product liability claims, product recalls, product seizures or withdrawals, delays or failures in testing or delivery, cost overruns, failure of regulatory authorities to grant marketing

Table of Contents

approvals, delays, suspensions or withdrawals of approvals, injunctions, fines, civil or criminal penalties, or other problems that could seriously harm our business. Contract manufacturers may encounter difficulties involving production yields, quality control and quality assurance. These manufacturers are subject to ongoing periodic unannounced inspection by the FDA and corresponding state and foreign agencies which audit strict compliance with cGMP and other applicable government regulations and corresponding foreign standards. However, we or a future collaborator may have limited control over third-party manufacturers' compliance with these regulations and standards. Present or future manufacturers might not be able to comply with cGMP and other FDA or international regulatory requirements.

We rely on third parties to conduct, supervise and monitor our clinical trials, and those third parties may not perform satisfactorily, including failing to meet established deadlines for the completion of such trials.

We rely on third parties such as contract research organizations, medical institutions and clinical investigators to enroll qualified patients and conduct, supervise and monitor our clinical trials. Our reliance on these third parties for clinical development activities reduces our control over these activities. Our reliance on these third parties, however, does not relieve us of our regulatory responsibilities, including ensuring that our clinical trials are conducted in accordance with good clinical practice regulations and the investigational plan and protocols contained in the IND. Furthermore, these third parties may also have relationships with other entities, some of which may be our competitors. In addition, they may not complete activities on schedule, or may not conduct our preclinical studies or clinical trials in accordance with regulatory requirements or our trial design. If these third parties do not successfully carry out their contractual duties or meet expected deadlines, our efforts to obtain regulatory approvals for, and commercialize, our product candidates may be delayed or prevented.

Because we may in the future enter into sales or collaboration transactions, we may be dependent upon our collaborators, and we may be unable to prevent them from taking actions that may be harmful to our business or inconsistent with our business strategy.

Any future licensing and collaboration agreements that we may enter into with respect to our product development candidates may reduce or eliminate the control we have over the development and commercialization of our product candidates. Our future collaborators may decide to terminate a development program under circumstances where we might have continued such a program, or may be unable or unwilling to pursue ongoing development and commercialization activities as quickly as we would prefer. A collaborator may follow a different strategy for product development and commercialization that could delay or alter development and commercial timelines and likelihood of success. A collaborator may also be unwilling or unable to fulfill its obligations to us, including its development and commercialization responsibilities. Any future collaborators will likely have significant discretion in determining the efforts and level of resources that they dedicate to the development and commercialization of our product candidates. In addition, although we seek to structure our agreements with potential collaborators to prevent the collaborator from developing and commercializing a competitive product, we are not always able to negotiate such terms and the possibility exists that our collaborators may develop and commercialize, either alone, or with others or through an in-license or acquisition, products that are similar to or competitive with the products that are the subject of the collaboration with us. If any collaborator terminates its collaboration with us or fails to perform or satisfy its obligations to us, the development, regulatory approval or commercialization of our product candidate would be delayed or may not occur and our business and prospects could be materially and adversely affected. Likewise, if we fail to fulfill our obligations under a collaboration and license agreement, our collaborator may be entitled to damages, to terminate the agreement, or terminate or reduce its financial payment obligations to us under our collaborative agreement.

Table of Contents

Our collaborations with outside scientists and consultants may be subject to restriction and change.

We work with chemists, biologists and other scientists at academic and other institutions, and consultants who assist us in our research, development, regulatory and commercial efforts. These scientists and consultants have provided, and we expect that they will continue to provide, valuable advice on our programs. These scientists and consultants are not our employees, may have other commitments that would limit their future availability to us and typically will not enter into non-compete agreements with us. If a conflict of interest arises between their work for us and their work for another entity, we may lose their services. In addition, we will be unable to prevent them from establishing competing businesses or developing competing products. For example, if a key principal investigator identifies a potential product or compound that is more scientifically interesting to his or her professional interests, his or her availability could be restricted or eliminated.

Risks Related to Commercialization of Our Product Candidates

If physicians and patients do not accept our future products, we may be unable to generate significant revenue, if any.

Even if we or a future collaborator receives regulatory approval for our product candidates, these product candidates may not gain market acceptance among physicians, healthcare payors, government pricing agencies, patients or the medical community. Physicians may elect not to recommend or patients may elect not to use these products for a variety of reasons, including:

prevalence and severity of adverse side effects;

ineffective marketing and distribution support;

timing of market introduction of competitive products;

lack of availability of, or inadequate reimbursement from managed care plans and other third-party or government payors;

lower demonstrated clinical safety and efficacy compared to other products;

other potential advantages of alternative treatment methods; and

lack of cost-effectiveness or less competitive pricing.

If our approved drugs fail to achieve market acceptance, we will not be able to generate significant revenue, if any.

If the government and third-party payors fail to provide coverage and adequate payment rates for our future products, if any, our revenue and prospects for profitability will be harmed.

In both domestic and foreign markets, our sales of any future products will depend in part upon the availability of reimbursement from third-party payors. Such third-party payors include government health programs such as Medicare and Medicaid, managed care providers, private health insurers and other organizations. These third-party payors are increasingly attempting to contain healthcare costs by demanding price discounts or rebates and limiting both coverage on which drugs they will pay for and the amounts that they will pay for new drugs. As a result, they may not cover or provide adequate payment for our drugs.

Table of Contents

In the United States there have been, and we expect that there will continue to be, a number of federal and state proposals to implement governmental pricing reimbursement controls. The Medicare Prescription Drug and Modernization Act of 2003 imposed new requirements for the distribution and pricing of prescription drugs that may affect the marketing of our products, if we obtain FDA approval for those products. Under this law, Medicare was extended to cover a wide range of prescription drugs other than those directly administered by physicians in a hospital or medical office. Competitive regional private drug plans were authorized to establish lists of approved drugs, or formularies, and to negotiate rebates and other price control arrangements with drug companies. Proposals to allow the government to negotiate Medicare drug prices with drug companies directly, if enacted, might further constrain drug prices, leading to reduced revenues and profitability. While we cannot predict whether any future legislative or regulatory proposals will be adopted, the adoption of such proposals could have a material adverse effect on our business, financial condition and profitability.

Foreign governments tend to impose strict price controls on pharmaceutical products, which may adversely affect our revenues, if any.

In some foreign countries, particularly the countries of the European Union, Canada and Japan, the pricing of prescription pharmaceuticals is subject to governmental control. In these countries, pricing negotiations with governmental authorities can take considerable time after the receipt of marketing approval for a product. To obtain reimbursement or pricing approval in some countries, we may be required to conduct a clinical trial that compares the cost-effectiveness of our product candidate to other available therapies. In some countries, the pricing is limited by the pricing of existing or comparable therapies. If reimbursement of our products is unavailable or limited in scope or amount, or if pricing is set at unsatisfactory levels, our ability to enter into collaborative development and commercialization agreements and our revenues from these agreements could be adversely affected.

There is a substantial risk of product liability claims in our business. If we are unable to obtain sufficient insurance, a product liability claim against us could adversely affect our business.

We face an inherent risk of product liability exposure related to the testing of our product candidates in human clinical trials and will face even greater risks upon any commercialization by us of our product candidates. We have product liability insurance covering our clinical trials in the amount of \$10 million, which we believe is adequate to cover any current product liability exposure we may have. However, liabilities may exceed the extent of our coverage, resulting in material losses. Clinical trial and product liability insurance is becoming increasingly expensive. As a result, we may be unable to obtain sufficient insurance or increase our existing coverage at a reasonable cost to protect us against losses that could have a material adverse effect on our business. An individual may bring a product liability claim against us if one of our products or product candidates causes, or is claimed to have caused, an injury or is found to be unsuitable for consumer use. Any product liability claim brought against us, with or without merit, could result in:

liabilities that substantially exceed our product liability insurance, which we would then be required to pay from other sources, if available;

an increase of our product liability insurance rates or the inability to maintain insurance coverage in the future on acceptable terms, or at all;

Table of Contents

withdrawal of clinical trial volunteers or patients;

damage to our reputation and the reputation of our products, resulting in lower sales;

regulatory investigations that could require costly recalls or product modifications;

litigation costs; and

the diversion of management's attention from managing our business.

Risks Related to Our Intellectual Property

If the combination of patents, trade secrets and contractual provisions that we rely on to protect our intellectual property is inadequate to provide us with market exclusivity, our ability to successfully commercialize our product candidates will be harmed and we may not be able to operate our business profitably.

Our success depends, in part, on our ability to obtain, maintain and enforce our intellectual property rights both domestically and abroad. The patent position of biotechnology companies is generally highly uncertain, involves complex legal and factual questions and has in recent years been the subject of much litigation. The validity, enforceability and commercial value of our rights, therefore, are highly uncertain.

Our patents may not protect us against our competitors. The issuance of a patent is not conclusive as to its scope, validity or enforceability. The scope, validity or enforceability of our patents can be challenged in litigation. Such litigation is often complex, can involve substantial costs and distraction and the outcome of patent litigation is often uncertain. If the outcome is adverse to us, third parties may be able to use our patented inventions and compete directly with us, without payment to us. Third parties may also be able to circumvent our patents by design innovations. We may not receive any additional patents based on the applications that we have filed and are currently pending.

Because patent applications in the United States and many foreign jurisdictions are typically not published until 18 months after filing or, in some cases, not at all, and because publications of discoveries in the scientific literature often lag behind actual discoveries, neither we nor our licensors or collaborators can be certain that they or we were the first to make the inventions claimed in patents or pending patent applications, or that they or we were the first to file for protection of the inventions set forth in these patent applications. Assuming the other requirements for patentability are met, in the United States, the first to make the claimed invention is entitled to the patent, and outside the United States, the first to file is entitled to the patent.

Many of the proteins that are the APIs in our product candidates are off-patent. Therefore, we have obtained and are seeking to obtain patents directed to novel compositions of matter, formulations, methods of manufacturing and methods of treatment to protect some of our products. Such patents may not, however, prevent our competitors from developing products using the same APIs but different manufacturing methods or formulation technologies that are not covered by our patents.

If third parties successfully assert that we have infringed their patents and proprietary rights or challenge the validity of our patents and proprietary rights, we may become involved in intellectual

Table of Contents

property disputes and litigation that would be costly, time consuming, and could delay or prevent the development or commercialization of our product candidates.

Our ability to commercialize our product candidates depends on our ability to develop, manufacture, market and sell our product candidates without infringing the proprietary rights of third parties. Third parties may allege our product candidates infringe their intellectual property rights. Numerous United States and foreign patents and pending patent applications that are owned by third parties exist in fields that relate to our product candidates and our underlying technology, including patents and patent applications claiming compositions of matter of, methods of manufacturing, and methods of treatment using, specific proteins, combinations of proteins, and protein crystals. For example, we are aware of some issued United States and/or foreign patents that may be relevant to the development and commercialization of our product candidates. However, we believe that, if these patents were asserted against us, it is likely that we would not be found to infringe any valid claim of the patents relevant to our development and commercialization of these products. If any of these patents were asserted against us and determined to be valid and construed to cover any of our product candidates, including, without limitation, ALTU-238 and ALTU-237, our development and commercialization of these products could be materially adversely affected.

Although we believe it is unlikely that we would be found to infringe any valid claim of these patents, we may not succeed in any action in which the patents are asserted against us. In order to successfully challenge the validity of any United States patent, we would need to overcome a presumption of validity. This burden is a high one requiring clear and convincing evidence. If any of these patents were found to be valid and we were found to infringe any of them, or any other patent rights of third parties, we would be required to pay damages, stop the infringing activity or obtain licenses in order to use, manufacture or sell our product candidates. Any required license might not be available to us on acceptable terms, or at all. If we succeeded in obtaining these licenses, payments under these licenses would reduce any earnings from our products. In addition, some licenses might be non-exclusive and, accordingly, our competitors might gain access to the same technology as that which was licensed to us. If we failed to obtain a required license or were unable to alter the design of our product candidates to make the licenses unnecessary, we might be unable to commercialize one or more of our product candidates, which could significantly affect our ability to establish and grow our commercial business.

In order to protect or enforce our patent rights, defend our activities against claims of infringement of third-party patents, or to satisfy contractual obligations to licensees of our own intellectual property, we might be required to initiate patent litigation against third parties, such as infringement suits or nullity, opposition or interference proceedings. Our collaborators or we may enforce our patent rights under the terms of our major collaboration and license agreements, but neither we nor our collaborators is required to do so. In addition, others may sue us for infringing their patent rights or file nullity, opposition or interference proceedings against our patents, even if such claims are without merit.

Intellectual property litigation is relatively common in our industry and can be costly. Even if we prevail, the cost of such litigation could deplete our financial resources. Litigation is also time consuming and could divert management's attention and resources away from our business. Furthermore, during the course of litigation, confidential information may be disclosed in the form of documents or testimony in connection with discovery requests, depositions or trial testimony. Disclosure of our confidential information and our involvement in intellectual property litigation could materially adversely affect our business. Some of our competitors may be able to sustain the costs of complex patent litigation more effectively than we can because they have substantially greater resources. In addition, any uncertainties resulting from the initiation and continuation of any litigation could significantly limit our ability to continue our operations.

Table of Contents

Many of our employees were previously employed at universities or other biotechnology or pharmaceutical companies, including our competitors or potential competitors. While we try to ensure that our employees do not use the proprietary information or know-how of others in their work for us, we may be subject to claims that we or these employees have inadvertently or otherwise used or disclosed intellectual property, trade secrets or other proprietary information of any such employee's former employer. Litigation may be necessary to defend against these claims and, even if we are successful in defending ourselves, could result in substantial costs or be distracting to management. If we fail in defending such claims, in addition to paying monetary damages, we may lose valuable intellectual property rights or personnel.

If we are unable to protect our trade secrets, we may be unable to protect our interests in proprietary technology, processes and know-how that is not patentable or for which we have elected not to seek patent protection.

In addition to patented technology, we rely upon unpatented proprietary technology, processes and know-how, including particularly our manufacturing know-how relating to the production of the crystallized proteins used in the formulation of our product candidates. In an effort to protect our unpatented proprietary technology, processes and know-how, we require our employees, consultants, collaborators, contract manufacturers and advisors to execute confidentiality agreements. These agreements, however, may not provide us with adequate protection against improper use or disclosure of confidential information, in particular as we are required to make such information available to a larger pool of people as we seek to increase production of our product candidates and their component proteins. These agreements may be breached, and we may not become aware of, or have adequate remedies in the event of, any such breach. In addition, in some situations, these agreements may conflict with, or be subject to, the rights of third parties with whom our employees, consultants, collaborators, contract manufacturers or advisors have previous employment or consulting relationships. Also, others may independently develop substantially equivalent technology, processes and know-how or otherwise gain access to our trade secrets. If we are unable to protect the confidentiality of our proprietary technology, processes and know-how, competitors may be able to use this information to develop products that compete with our products, which could adversely impact our business.

If we fail to comply with our obligations in the agreements under which we licensed development, commercialization or other technology rights to products or technology from third parties, we could lose license rights that are important to our business or incur financial obligations based on our exercise of such license rights.

Some of our license agreements provide for licenses to us of technology that is important to our business, and we may enter into additional agreements in the future that provide licenses to us of valuable technology. These licenses impose, and future licenses may impose, various commercialization, milestone and other obligations on us. If we fail to comply with these obligations, the licensor may have the right to terminate the license even where we are able to achieve a milestone or cure a default after a date specified in an agreement, in which event we would lose valuable rights and our ability to develop our product candidates.

Risks Related to Our Employees and Growth

Our future success depends on our ability to attract, retain and motivate key executives and personnel and to attract, retain and motivate qualified personnel.

Table of Contents

We are a small company with 38 employees as of April 30, 2009. We recently underwent a strategic realignment, which resulted in an approximate 70% headcount reduction. Our success depends on our ability to attract, retain and motivate highly qualified management, development and scientific personnel, which may be made more difficult as a result of the realignment. In particular, we are highly dependant on our new President and Chief Executive Officer, Dr. Georges Gemayel, and the other principal members of our executive, development and scientific teams.

All of the arrangements we have with the key members of our executive, development and scientific teams may be terminated by us or the employee at any time without notice. The loss of the services of any of these persons might impede the achievement of our research, development and commercialization objectives.

Recruiting and retaining qualified development and scientific personnel and sales and marketing personnel will also be critical to our success. We may not be able to attract and retain these personnel on acceptable terms given the competition among numerous pharmaceutical and biotechnology companies for similar personnel. We also experience competition for the hiring of development and scientific personnel from universities and research institutions. We do not maintain key person insurance on any of our employees.

As we evolve from a company primarily involved in drug research and development into one that may become involved in the commercialization of drug products, we may have difficulty managing our growth, which could disrupt our operations.

As we advance our drug candidates through the development process, we will need to expand our development, regulatory, manufacturing, sales and marketing capabilities or contract with other organizations to provide these capabilities for us. As our operations expand, we expect that we will need to manage additional relationships with various contract manufacturers, collaborative partners, suppliers and other organizations. Our ability to manage our operations and growth requires us to continue to improve our operational, financial and management controls, reporting systems and procedures. Such growth could place a strain on our management, administrative and operational infrastructure. We may not be able to make improvements to our management information and control systems in an efficient or timely manner and may discover deficiencies in existing systems and controls. In addition, the physical expansion of our operations may lead to significant costs and may divert our management and business development resources. Any inability to manage growth could delay the execution of our business plans or disrupt our operations.

Risks Related to Our Common Stock and Public Company Compliance Requirements

Our stock price has been and is likely to continue to be volatile.

Investors should consider an investment in our common stock as risky and subject to significant loss and wide fluctuations in market value. Our common stock has only been publicly traded since January 26, 2006, and accordingly there is a limited history on which to gauge the volatility of our stock price. Our stock price has, however, been volatile since we began to be publicly traded. For example, our stock price declined approximately 50% following our announcement that our collaboration with Genentech had been terminated in December 2007. Our stock price also declined sharply following our announcement of the top line data of our Phase III efficacy trial of Trizytek in August 2008 and in connection with the announcement of our strategic realignment in January 2009. The stock market as a whole has experienced significant volatility, particularly with respect to pharmaceutical, biotechnology and other life sciences company stocks. The volatility of pharmaceutical, biotechnology and other life

Table of Contents

sciences company stocks may not relate to the operating performance of the companies represented by the stock. In addition, we are currently not in compliance with the applicable rules to qualify for continued listing on The NASDAQ Global Market. To maintain listing, we are required, among other things, to maintain a daily closing bid price of \$1.00 and a minimum market value of publicly held shares of \$5.0 million. NASDAQ has suspended enforcement of its rules requiring a minimum \$1.00 closing bid price and a minimum market value of publicly held shares of \$5.0 million until July 20, 2009.

The market price of our common stock has been between \$0.14 and \$19.79 per share from January 1, 2007 until May 5, 2009. Some of the factors that may cause the market price of our common stock to continue to fluctuate include:

delays in or results from our clinical trials or studies;

our entry into or the loss of a significant collaboration or the expansion or contraction of a significant collaboration, disputes with a collaborator, or delays in the progress of a collaborative development program;

competitive product information such as results of clinical trials conducted by others on drugs that would compete with our product candidates or the regulatory filing or approval of such competitive products;

litigation or threatened litigation, including any litigation or arbitration we may be subject to in connection with our Manufacturing Agreement with Lonza

delays or other problems with manufacturing our product candidates or approved products;

failure or delays in advancing product candidates from our preclinical programs, or other product candidates we may discover or acquire in the future, into clinical trials;

failure or discontinuation of any of our research programs;

regulatory review delays, changes in regulatory requirements, new regulatory developments or enforcement policies in the United States and foreign countries;

developments or disputes concerning patents or other proprietary rights;

introduction of technological innovations or new commercial products by us or our competitors;

changes in estimates or recommendations by securities analysts, if any, who cover our common stock;

failure to meet estimates or recommendations by securities analysts, if any, who cover our common stock;

positive or negative publicity regarding our product candidates or any approved products;

sales, future sales or anticipated sales of our common stock by us or our stockholders;

Table of Contents

changes in the structure of health care payment systems;

failure of any of our product candidates, if approved, to achieve commercial success;

economic and other external factors or other disasters or crises;

period-to-period fluctuations in our financial results; and

general market conditions.

These and other external factors may cause the market price and demand for our common stock to fluctuate substantially, which may limit or prevent investors from readily selling their shares of common stock and may otherwise negatively affect the liquidity of our common stock. In addition, in the past, when the market price of a stock has been volatile, holders of that stock have instituted securities class action litigation against the company that issued the stock. If any of our stockholders brought a lawsuit against us, we could incur substantial costs defending the lawsuit regardless of the validity of the claims or the ultimate outcome. Such a lawsuit could also divert the time and attention of our management and create additional volatility in our common stock price.

One of our stockholders has substantial influence over us which could delay or prevent a change in corporate control or result in the entrenchment of management and the board of directors.

Entities affiliated with Warburg Pincus Private Equity VIII, L.P., or Warburg Pincus, one of our principal stockholders, are entitled to designate up to two individuals as candidates to our board of directors, for so long as Warburg Pincus owns at least 2,691,935 shares of our common stock, or one individual for so long as Warburg Pincus owns at least 1,794,623 shares of our common stock. We have agreed to nominate and use our reasonable efforts to cause the election of such candidates. Stewart Hen and Jonathan S. Leff were the members of our board of directors designated by Warburg Pincus, but each of these individuals resigned as Directors effective December 31, 2008, and Warburg Pincus has not designated any candidates to replace them. As of April 20, 2009, Warburg Pincus owned 1,784,948 shares of common stock and warrants to purchase an additional 717,917 shares of our common stock.

A significant portion of our total outstanding shares may be sold into the market in the near future. This could cause the market price of our common stock to drop significantly, even if our business is doing well.

Sales of a substantial number of shares of our common stock in the public market could occur at any time. These sales, or the perception in the market that the holders of a large number of shares intend to sell shares, could reduce the market price of our common stock. We had 31,131,056 shares of common stock outstanding as of May 5, 2009. Holders of up to approximately 7.8 million shares of our common stock, assuming the exercise of warrants to purchase shares of our common stock, have rights, subject to some conditions, to require us to file registration statements covering their shares or to include their shares in registration statements that we may file for ourselves or other stockholders. We have registered all shares of common stock issuable under our equity compensation plans and they can now be freely sold in the public market upon issuance. A decline in the price of shares of our common stock might impede our ability to raise capital through the issuance of additional shares of our common stock or other equity securities, and may cause our stockholders to lose part or all of their investments in our shares of common stock.

Table of Contents

Provisions of our charter, bylaws, and Delaware law may make an acquisition of us or a change in our management more difficult.

Certain provisions of our certificate of incorporation and bylaws could discourage, delay or prevent a merger, acquisition or other change in control that stockholders may consider favorable, including transactions in which stockholders might otherwise receive a premium for their shares. These provisions could limit the price that investors might be willing to pay in the future for shares of our common stock, thereby depressing the market price of our common stock. Stockholders who wish to participate in these transactions may not have the opportunity to do so. Furthermore, these provisions could prevent or frustrate attempts by our stockholders to replace or remove our management. These provisions:

allow the authorized number of directors to be changed only by resolution of our board of directors;

establish a classified board of directors, such that not all members of the board are elected at one time;

authorize our board of directors to issue without stockholder approval blank check preferred stock that, if issued, could operate as a poison pill to dilute the stock ownership of a potential hostile acquirer to prevent an acquisition that is not approved by our board of directors;

require that stockholder actions must be effected at a duly called stockholder meeting and prohibit stockholder action by written consent;

establish advance notice requirements for stockholder nominations to our board of directors or for stockholder proposals that can be acted on at stockholder meetings;

limit who may call stockholder meetings; and

require the approval of the holders of 80% of the outstanding shares of our capital stock entitled to vote in order to amend certain provisions of our restated certificate of incorporation and restated bylaws.

In addition, because we are incorporated in Delaware, we are governed by the provisions of Section 203 of the Delaware General Corporation Law, which may, unless certain criteria are met, prohibit large stockholders, in particular those owning 15% or more of our outstanding voting stock, from merging or combining with us for a prescribed period of time.
