In accordance with U.S. GAAP regarding fair value measurements, fair value is defined as the price that the Fund would receive to sell an asset or pay to transfer a liability in an orderly transaction between market participants at the measurement date. The U.S GAAP disclosure requirements establish a framework for measuring fair value, and a three-level hierarchy for fair value measurements based upon the transparency of inputs to the valuation of an asset or liability. Inputs may be observable or unobservable and refer broadly to the assumptions that market participants would use in pricing the asset or liability. Observable inputs reflect the assumptions market participants would use in pricing the asset or liability based on market data obtained from sources independent of the Fund. Unobservable inputs reflect the Fund's own assumptions about the assumptions that market participants would use in pricing the asset or liability based on the best information available in the circumstances. Each investment is assigned a level based upon the observability of the inputs which are significant to the overall valuation. The three-tier hierarchy of inputs is summarized below.

Level 1 quoted prices in active markets for identical investments

Level 2 other significant observable inputs (including quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.)

Level 3 significant unobservable inputs (including the Fund's own assumptions in determining the fair value of investments)

The following table summarizes the valuation of the Fund's investments by the above fair value hierarchy levels as of June 30, 2012:

Asset-Backed Securities, Commercial Mortgage-Backed Securities and Collateralized Mortgage Obligations Within the non-Agency Mortgage Backed (RMBS and CMO) as well as the non-Credit Card or non-Auto Loan backed Asset Backed Securities, due to the relative illiquidity of these markets, the inability of the Fund to observe trading activity in the markets, and the broker quotes not being indicative to trade, the Fund has determined securities in these sectors generally warrant a Level 3 classification.

Because of the wide range of spreads and relatively low trading activity of similar securities, the Fund's Valuation Committee engages in a regular review process of such securities which meets as often as daily, and involves (as needed) participation from the Mortgage Trading Desk, Fixed Income Research, Risk, Pricing Group, Fund Accounting and Legal. The Fund's Pricing Group gathers prices from Pricing Direct and IDC (and other vendors as deemed appropriate over time) and from major recognized brokers who make a market in these instruments. The Fund's trading desk reports on trading activity and engages in dialogue with the trading personnel at the brokers. This review covers the entire portfolio of securities in this sector.

Because the Fund has declared these instruments as Level 3 (due to wide spreads, low quality ratings, and relatively low trading activity), significant inputs (including Constant Prepayment Rate (CPR), Loss Severity, and Probability of Default) generally considered observable are deemed unobservable in these asset classes. The Fund's Valuation Committee periodically reviews these asset classes (as a standing practice) to confirm that the status remains unchanged.

The significant unobservable inputs used in the fair value measurement of the Fund's Collateralized Mortgage Obligation Securities are CPR, Loss Severity, and Probability of Default. On non-evaluated assets, broker quotes are used when other market information not available to produce an evaluation and are considered non-observable. Generally, a change in the assumption used for the probability of default is accompanied by a directionally similar change in the assumption used for the loss severity and a directionally opposite change in the assumption used for prepayment rates.

Edgar Filing: ALLIANCEBERNSTEIN GLOBAL HIGH INCOME FUND INC - Form N-Q

The significant unobservable inputs used in the fair value measurement of the Fund's Private Corporate and Asset Backed Securities are the spread over the public curve as well as the spreads or yields on the non-rated instruments.

Bank Loans The significant unobservable inputs used in the fair value measurement of the Fund's Bank Loans are the market quotes that are received by the pricing vendors.

Corporate, Emerging Markets-Sovereigns, Emerging Markets-Treasuries, Government, Agency, and Municipal Securities The significant unobservable inputs used in the fair value measurement of the Fund's Corporate, Emerging Markets-Sovereigns, Emerging Markets-Treasuries, Government, Agency, and Municipal Securities are non-agency quality ratings, spreads on non-rated instrument, and yields on non-rated instruments. On non-evaluated assets, broker quotes are used when other market information not available to produce an evaluation and are considered non-observable. Generally, an increase in spreads or a decrease in yields leads to an inverse move in the price of the assets. A decrease in rating or absence of a rating is accompanied by a directionally opposite change in price.

The significant unobservable inputs used in the fair value measurement of these securities are the spread over the public curve as well as the spreads or yields on non-rated instruments.
