BASE PROSPECTUS

\$100,000,000

AllianzGI Convertible & Income Fund II

Common Shares of Beneficial Interest

Investment Objective. AllianzGI Convertible & Income Fund II (formerly, AGIC Convertible & Income Fund II) (the Fund) is a diversified, closed-end management investment company that commenced operations on July 31, 2003, following the initial public offering of its common shares. The Fund's investment objective is to provide total return through a combination of capital appreciation and high current income. The Fund cannot assure you that it will achieve its investment objective, and you could lose all of your investment in the Fund.

Portfolio Contents. Under normal circumstances, the Fund will invest at least 80% of its total assets in a diversified portfolio of convertible securities and non-convertible income-producing securities. The portion of the Fund's assets invested in convertible securities, on the one hand, and non-convertible income-producing securities, on the other, will vary from time to time consistent with the Fund's investment objective, although the Fund will normally invest at least 50% of its total assets in convertible securities. In making allocation decisions, Allianz Global Investors U.S. LLC (formerly, Allianz Global Investors Capital LLC) (AGI U.S.) will consider factors such as changes in equity prices, changes in interest rates and other economic and market factors. The Fund may invest without limit in convertible securities and non-convertible income-producing securities that are rated below investment grade (below Baa3 by Moody's Investors Service, Inc. (Moody's) or below BBB- by either Standard & Poor's Ratings Services, a division of The McGraw-Hill Company, Inc. (S&P) or Fitch, Inc. (Fitch)) or that are unrated but judged by AGI U.S. to be of comparable quality, and expects that ordinarily AGI U.S.'s portfolio strategies will result in the Fund investing primarily in these securities. The Fund may invest without limit in securities of any rating. The Fund typically invests in securities with a broad range of maturities. The weighted average maturity of the Fund's portfolio will typically range from five to ten years, although the weighted average maturity of obligations held by the Fund may be shorter or longer at any time or from time to time depending on market conditions.

(continued on following page)

The Fund's common shares (the Common Shares) are listed on the New York Stock Exchange (NYSE) under the symbol NCZ. The last reported sale price of the Common Shares, as reported by the NYSE on May 31, 2013, was \$8.87 per Common Share. The net asset value of the Common Shares at the close of business on May 31, 2013, was \$8.34 per Common Share.

Investment in the Fund's Common Shares involves substantial risks arising from, among other strategies, the Fund's ability to invest in convertible securities and in debt instruments that are, at the time of purchase, rated below investment grade (below Baa3 by Moody's or below BBB- by either S&P or Fitch) or unrated but determined by AGI U.S. to be of comparable quality, and the Fund's use of leverage. Debt securities of below investment grade quality are regarded as having predominantly speculative characteristics with respect to capacity to pay interest and to repay principal, and are commonly referred to as high yield securities or junk bonds. Because of the risks associated with investing in convertible securities and high yield securities and using leverage, an investment in the Fund should be considered speculative. Before investing in the Common Shares, you should read the discussion of the principal risks of investing in the Fund, including the risks of leverage and of investing in below investment grade/high yield securities, in Principal Risks of the Fund. Certain of these risks are summarized in Prospectus Summary Principal Risks of the Fund.

The Securities and Exchange Commission has not approved or disapproved of these securities or determined that this prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

Table of Contents

(continued from previous page)

The Fund may invest up to 20% of its total assets in securities other than convertible securities and non-convertible income-producing securities. The Fund may invest up to 5% of its total assets in illiquid securities (*i.e.*, securities that cannot be disposed of within seven days in the ordinary course of business at approximately the value at which the Fund has valued the securities). The Fund may hold or have exposure to equity securities. The Fund may invest in securities of other open- or closed-end investment companies, including, but not limited to, exchange-traded funds. The Fund may invest in securities of companies with small and medium market capitalizations.

The Fund also invests in non-convertible income-producing securities, including, but not limited to, corporate bonds, debentures, notes and other similar types of corporate debt instruments of U.S. and foreign corporate and other issuers, including commercial paper, as well as non-convertible preferred stocks; bank loans (including, among others, senior loans, delayed funding loans, revolving credit facilities and loan participations and assignments); real estate investment trusts and commercial and other mortgage-related and asset-backed securities issued on a public or private basis; payment-in-kind securities; credit-linked trust certificates and other securities issued by special purpose or structured vehicles; zero-coupon bonds; bank certificates of deposit, fixed time deposits and bankers' acceptances; and U.S. Government securities. The Fund's investments in non-convertible income-producing securities may have fixed or variable principal payments and all types of interest rate and dividend payment and reset terms, including fixed rate, adjustable rate, zero-coupon, contingent, deferred, payment-in-kind and auction-rate features.

The Fund may utilize various derivative strategies (both long and short positions) involving the purchase or sale of futures and forward contracts, call and put options, credit default swaps, total return swaps, basis swaps and other swap agreements and other derivative instruments for investment purposes, leveraging purposes or in an attempt to hedge against market, credit, interest rate, currency and other risks in the portfolio. The Fund may purchase and sell securities on a when-issued, delayed delivery or forward commitment basis and may engage in short sales.

The Fund may invest up to 20% of its total assets in U.S. dollar-denominated securities of foreign issuers based in developed countries. For this purpose, foreign securities include, but are not limited to, foreign convertible securities and non-convertible income-producing securities, foreign equity securities (including preferred securities of foreign issuers), foreign bank obligations, and obligations of foreign governments or their subdivisions, agencies and instrumentalities, international agencies and supranational entities. For this purpose, foreign securities do not include American Depository Receipts or securities guaranteed by a United States person, but may include foreign securities in the form of Global Depository Receipts or other securities representing underlying shares of foreign issuers. See *Investment Objective and Strategies* *Portfolio Contents* *Foreign (Non-U.S.) Investments*.

The Fund may invest without limit in securities that have not been registered for public sale in the U.S. or relevant non-U.S. jurisdiction, including, without limitation, securities eligible for purchase and sale pursuant to Rule 144A under the Securities Act of 1933, as amended (the *Securities Act*), or relevant provisions of applicable non-U.S. law, and other securities issued in private placements.

Leverage. The Fund currently utilizes leverage through its outstanding auction rate preferred shares. The Fund may issue additional preferred shares to add leverage to its portfolio. The Fund may also add leverage to its portfolio by utilizing reverse repurchase agreements, dollar rolls or other forms of borrowings, such as bank loans or commercial paper or other credit facilities, although these forms of leverage will generally be used, if at all, as a substitute for, rather than in addition to, the leverage obtained through the issuance of preferred shares. The Fund may also enter into transactions other than those noted above that may give rise to a form of leverage including, among others, futures and forward contracts, credit default swaps, total return swaps and other derivative transactions, loans of portfolio securities, short sales and when-issued, delayed delivery and forward commitment transactions. Depending upon market conditions and other factors, the Fund may or may not determine to add leverage following an offering to maintain or increase the total amount of leverage (as a percentage of the Fund's total assets) that the Fund currently maintains, taking into account the additional assets

Table of Contents

raised through the issuance of Common Shares in such offering. The Fund utilizes leverage opportunistically and may choose to increase or decrease, or eliminate entirely, its use of leverage over time and from time to time based on AGI U.S.'s assessment of the yield curve environment, interest rate trends, market conditions and other factors. If the Fund determines to add leverage following an offering, it is not possible to predict with accuracy the precise amount of leverage that would be added, in part because it is not possible to predict the number of Common Shares that ultimately will be sold in an offering or series of offerings. To the extent that the Fund does not add additional leverage following an offering, the Fund's total amount of leverage as a percentage of its total assets will decrease, which could result in a reduction of investment income available for distribution to common shareholders. Leveraging is a speculative technique and there are special risks and costs involved. There can be no assurance that a leveraging strategy will be used or that it will be successful during any period in which it is employed. See "Use of Leverage" and "Principal Risks of the Fund - Leverage Risk."

This prospectus is part of a registration statement that the Fund has filed with the Securities and Exchange Commission, using the shelf registration process. The Fund may offer, from time to time, in one or more offerings, including through rights offerings, up to \$100,000,000 of the Common Shares on terms to be determined at the time of the offering. This prospectus provides you with a general description of the Common Shares that the Fund may offer. Each time the Fund uses this prospectus to offer Common Shares, the Fund will provide a prospectus supplement that will contain specific information about the terms of that offering. The prospectus supplement may also add, update or change information contained in this prospectus. You should read this prospectus and the applicable prospectus supplement, which contains important information about the Fund, carefully before you invest in the Common Shares. Common Shares may be offered directly to one or more purchasers, through agents designated from time to time by the Fund, or to or through underwriters or dealers. The prospectus supplement relating to an offering will identify any agents, underwriters or dealers involved in the sale of Common Shares, and will set forth any applicable purchase price, fee, commission or discount arrangement between the Fund and its agents or underwriters, or among the Fund's underwriters, or the basis upon which such amount may be calculated. See "Plan of Distribution." The Fund may not sell any Common Shares through agents, underwriters or dealers without delivery or deemed delivery of a prospectus supplement describing the method and terms of the particular offering of the Common Shares.

You should retain this prospectus and any prospectus supplement for future reference. A Statement of Additional Information, dated July 1, 2013, containing additional information about the Fund has been filed with the Securities and Exchange Commission and is incorporated by reference in its entirety into this prospectus. You can review the table of contents of the Statement of Additional Information on page 96 of this prospectus. You may request a free copy of the Statement of Additional Information, request the Fund's most recent annual and semiannual reports, request information about the Fund and make shareholder inquiries by calling toll free (800) 254-5197 or by writing to the Fund at c/o Allianz Global Investors Fund Management LLC, 1633 Broadway, New York, New York 10019. You may also obtain a copy of the Statement of Additional Information (and other information regarding the Fund) from the Securities and Exchange Commission's Public Reference Room in Washington, D.C. by calling (202) 551-8090. The Securities and Exchange Commission charges a fee for copies. The Fund's Statement of Additional Information and most recent annual and semiannual reports are available, free of charge, on the Fund's website (<http://www.allianzinvestors.com>). You can obtain the same information, free of charge, from the Securities and Exchange Commission's web site (<http://www.sec.gov>).

The Common Shares do not represent a deposit or obligation of, and are not guaranteed or endorsed by, any bank or other insured depository institution, and are not federally insured by the Federal Deposit Insurance Corporation, the Federal Reserve Board or any other government agency.

Table of Contents

PROSPECTUS SUMMARY

This is only a summary. This summary may not contain all of the information that you should consider before investing in the Fund's common shares of beneficial interest (the Common Shares). You should review the more detailed information contained in this prospectus and in any related prospectus supplement and in the Statement of Additional Information, especially the information set forth under the heading Principal Risks of the Fund.

The Fund

AllianzGI Convertible & Income Fund II (the Fund) is a diversified, closed-end management investment company. The Fund commenced operations on July 31, 2003, following the initial public offering of its Common Shares. Effective January 28, 2013, the Fund changed its name from AGIC Convertible & Income Fund II to its current name, AllianzGI Convertible & Income Fund II.

The Common Shares are listed on the New York Stock Exchange (NYSE) under the symbol NCZ. As of May 31, 2013, the net assets of the Fund attributable to Common Shares were \$566,304,670 and the Fund had outstanding 67,926,745 Common Shares and 10,960 auction rate preferred shares of beneficial interest (ARPS) and, together with any other preferred shares issued by the Fund, Preferred Shares). The last reported sale price of the Common Shares, as reported by the NYSE on May 31, 2013, was \$8.87 per Common Share. The net asset value of the Common Shares at the close of business on May 31, 2013, was \$8.34 per Common Share. See Description of Capital Structure.

The Offering

The Fund may offer, from time to time, in one or more offerings, including through rights offerings, up to \$100,000,000 of the Common Shares on terms to be determined at the time of the offering. The Common Shares may be offered at prices and on terms to be set forth in one or more prospectus supplements. You should read this prospectus and the applicable prospectus supplement carefully before you invest in the Common Shares. Common Shares may be offered directly to one or more purchasers, through agents designated from time to time by the Fund, or to or through underwriters or dealers. The prospectus supplement relating to an offering will identify any agents, underwriters or dealers involved in the sale of Common Shares, and will set forth any applicable purchase price, fee, commission or discount arrangement between the Fund and its agents or underwriters, or among the Fund's underwriters, or the basis upon which such amount may be calculated. See Plan of Distribution. The Fund may not sell any Common Shares through agents, underwriters or dealers without delivery or deemed delivery of a prospectus supplement describing the method and terms of the particular offering of the Common Shares.

Use of Proceeds

The net proceeds of an offering will be invested in accordance with the Fund's investment objective and policies as set forth below. It is presently anticipated that the Fund will be able to invest substantially all of the net proceeds of an offering in investments that meet its investment objective and policies within 30 days of receipt by the Fund. See Use of Proceeds.

Table of Contents

Investment Objective

The Fund's investment objective is to provide total return through a combination of capital appreciation and high current income. The Fund attempts to achieve this objective by investing in a diversified portfolio of convertible securities and non-convertible income-producing securities described under "Portfolio Contents" below. As described below, in seeking to achieve its investment objective, the Fund expects ordinarily to invest primarily in high yield securities or junk bonds. The Fund cannot assure you that it will achieve its investment objective.

Portfolio Management Strategies

In selecting investments for the Fund, Allianz Global Investors U.S. LLC (formerly, Allianz Global Investors Capital LLC) (AGI U.S. or the Sub-Adviser), the Fund's sub-adviser, attempts to identify issuers that successfully adapt to change. AGI U.S. uses traditional credit analysis combined with a disciplined, fundamental bottom-up research process that facilitates the early identification of issuers demonstrating an ability to improve their fundamental characteristics. See "Independent Credit Analysis" below. AGI U.S. attempts to identify potential investments that it expects will exceed minimum credit statistics and exhibit the highest visibility of future expected operating performance. AGI U.S.'s sell discipline is clearly defined and designed to drive the Fund's portfolio continually toward strength, taking into account factors such as a change in credit fundamentals, a decline in attractiveness relative to other securities and a decline in industry fundamentals.

In selecting convertible securities for investment by the Fund, AGI U.S. evaluates each convertible security's investment characteristics as an income-producing security, using the techniques described above, as well as its potential for capital appreciation, using techniques that focus on the security's equity characteristics. AGI U.S. seeks to capture approximately 60-80% of any increase in the market price of the underlying equities (upside potential) and 50% or less of any decrease in the market price of the underlying equities (downside exposure). In analyzing specific companies for possible investment, AGI U.S. ordinarily looks for several of the following characteristics: above-average per share earnings growth; high return on invested capital; a healthy balance sheet; sound financial and accounting policies and overall financial strength; strong competitive advantages; effective research and product development and marketing; development of new technologies; efficient service; pricing flexibility; strong management; and general operating characteristics that will enable the companies to compete successfully in their respective markets. AGI U.S. will consider selling a particular convertible security when any of those factors materially changes.

Independent Credit Analysis

AGI U.S. relies heavily on its own analysis of the credit quality and risks associated with individual securities considered for the Fund, rather than relying exclusively on rating agencies or third-party research. The Fund's portfolio managers utilize this information in an attempt to minimize credit risk and identify issuers, industries or

Table of Contents

sectors that are undervalued or that offer attractive capital appreciation potential or high current income relative to AGI U.S.'s assessment of their credit characteristics. This aspect of AGI U.S.'s capabilities will be particularly important to the extent that the Fund invests in high yield securities.

Portfolio Contents

Under normal circumstances, the Fund will invest at least 80% of its total assets in a diversified portfolio of convertible securities and non-convertible income-producing securities (the 80% Policy). The portion of the Fund's assets invested in convertible securities, on the one hand, and non-convertible income-producing securities, on the other, will vary from time to time consistent with the Fund's investment objective, although the Fund will normally invest at least 50% of its total assets in convertible securities (the 50% Policy). The Fund's investments in derivatives and other synthetic instruments that have economic characteristics similar to convertible securities or non-convertible income-producing securities will be counted toward satisfaction of the Fund's 80% Policy and 50% Policy. For purposes of the Fund's 80% Policy and 50% Policy, the Fund generally values its derivative instruments based on their market value. In making allocation decisions, AGI U.S. will consider factors such as changes in equity prices, changes in interest rates and other economic and market factors. The Fund may invest without limit in convertible securities and non-convertible income-producing securities that are below investment grade quality, and expects that ordinarily AGI U.S.'s portfolio strategies will result in the Fund investing primarily in these securities. The Fund typically invests in securities with a broad range of maturities. The weighted average maturity of the Fund's portfolio will typically range from five to ten years, although the weighted average maturity of obligations held by the Fund may be shorter or longer at any time or from time to time depending on market conditions.

The Fund may invest up to 20% of its total assets in securities other than convertible securities and non-convertible income-producing securities. The Fund may invest up to 5% of its total assets in illiquid securities (*i.e.*, securities that cannot be disposed of within seven days in the ordinary course of business at approximately the value at which the Fund has valued the securities). The Fund may hold or have exposure to equity securities. The Fund may invest in securities of other open- or closed-end investment companies, including, but not limited to, exchange-traded funds (ETFs). The Fund may invest in securities of companies with small and medium market capitalizations.

The Fund may utilize various derivative strategies (both long and short positions) involving the purchase or sale of futures and forward contracts, call and put options, credit default swaps, total return swaps, basis swaps and other swap agreements and other derivative instruments for investment purposes, leveraging purposes or in an attempt to hedge against market, credit, interest rate, currency and other risks in the portfolio. The Fund may purchase and sell securities

Table of Contents

on a when-issued, delayed delivery or forward commitment basis and may engage in short sales.

Convertible Securities

The Fund may invest without limit in convertible securities, and these securities will ordinarily constitute a principal component of the Fund's investment program. Under normal circumstances, the Fund will invest at least 50% of its total assets in convertible securities. Convertible securities are bonds, debentures, notes, preferred stocks or other securities that may be converted or exchanged at either a stated price or stated rate into underlying shares of common stock. Convertible securities have general characteristics similar to both debt securities and equity securities. Although to a lesser extent than with debt obligations, the market value of convertible securities tends to decline as interest rates increase and, conversely, tends to increase as interest rates decline. In addition, because of the conversion feature, the market value of convertible securities tends to vary with fluctuations in the market value of the underlying common stocks and, therefore, also will react to variations in the general market for equity securities. Convertible securities are investments that provide for a stable stream of income with generally higher yields than common stocks. There can be no assurance of current income because the issuers of the convertible securities may default on their obligations. Convertible securities, however, generally offer lower interest or dividend yields than non-convertible debt securities of similar credit quality because of the potential for equity-related capital appreciation. A convertible security, in addition to providing current income, offers the potential for capital appreciation through the conversion feature, which enables the holder to benefit from increases in the market price of the underlying common stock. See Investment Objective and Strategies Portfolio Contents Convertible Securities.

Synthetic Convertible Securities

The Fund also may invest without limit in synthetic convertible securities, which will be selected based on the similarity of their economic characteristics to those of a traditional convertible security due to the combination of separate securities that possess the two principal characteristics of a traditional convertible security, *i.e.*, an income-producing security (income-producing component) and the right to acquire an equity security (convertible component). The income-producing component is achieved by investing in non-convertible, income-producing securities such as bonds, preferred stocks and money market instruments. The convertible component is achieved by purchasing warrants or options to buy common stock at a certain exercise price, or options on a stock index. The Fund may also purchase synthetic securities created by other parties, typically investment banks, including convertible structured notes. The income-producing and convertible components of a synthetic convertible security may be issued separately by different issuers and at different times. The values of synthetic convertible securities will respond differently to market fluctuations than a traditional convertible security because a synthetic convertible is

Table of Contents

composed of two or more separate securities or instruments, each with its own market value. Synthetic convertible securities are also subject to the risks associated with derivatives. See Principal Risks of the Fund Derivatives Risk. In addition, if the value of the underlying common stock or the level of the index involved in the convertible element falls below the strike price of the warrant or option, the warrant or option may lose all value. The Fund's holdings of synthetic convertible securities are considered convertible securities for purposes of the Fund's policy to normally invest at least 50% of its total assets in convertible securities and 80% of its total assets in a diversified portfolio of convertible securities and non-convertible income-producing securities. See Investment Objective and Strategies Portfolio Contents Synthetic Convertible Securities.

Non-Convertible Income-Producing Securities

The Fund also invests in non-convertible income-producing securities, including, but not limited to, corporate bonds, debentures, notes and other similar types of corporate debt instruments of U.S. and foreign corporate and other issuers, including commercial paper, as well as non-convertible preferred stocks; bank loans (including, among others, senior loans, delayed funding loans, revolving credit facilities and loan participations and assignments); real estate investment trusts (REITs) and commercial and other mortgage-related and asset-backed securities issued on a public or private basis; payment-in-kind securities; credit-linked trust certificates and other securities issued by special purpose or structured vehicles; zero-coupon bonds; bank certificates of deposit, fixed time deposits and bankers' acceptances; and U.S. Government securities. The Fund's investments in non-convertible income-producing securities may have fixed or variable principal payments and all types of interest rate and dividend payment and reset terms, including fixed rate, adjustable rate, zero-coupon, contingent, deferred, payment-in-kind and auction-rate features. See Investment Objective and Strategies Portfolio Contents.

High Yield Securities

The Fund may invest without limit in convertible securities and non-convertible income producing securities that are rated below investment grade (below Baa3 by Moody's Investors Service, Inc. (Moody's) or below BBB- by either Standard & Poor's (S&P) or Fitch Inc. (Fitch)) or that are unrated but determined by AGI U.S. to be of comparable quality, and expects that normally AGI U.S.'s portfolio strategies will result in the Fund investing primarily in those securities. Below investment grade securities are commonly referred to as high yield securities or junk bonds. The Fund may invest in high yield securities of any rating, including securities given the lowest non-default rating (Caa by Moody's or C by S&P or Fitch, as described in Appendix A) or unrated securities judged to be of comparable quality by AGI U.S. The Fund may purchase distressed securities that are in default or the issuers of which are in bankruptcy. High yield securities involve a greater degree of risk (in particular, a greater risk of default) than, and special risks in addition to the risks

Table of Contents

associated with, investment grade debt obligations. While offering a greater potential opportunity for capital appreciation and higher yields, high yield securities typically entail greater potential price volatility and may be less liquid than higher-rated securities. High yield securities may be regarded as predominantly speculative with respect to the issuer's continuing ability to make timely principal and interest payments. They also may be more susceptible to real or perceived adverse economic and competitive industry conditions than higher-rated securities. Debt securities in the lowest investment grade category also may be considered to possess some speculative characteristics by certain ratings agencies. See Investment Objective and Strategies Portfolio Contents High Yield Securities.

Foreign (Non-U.S.) Investments

The Fund may invest up to 20% of its total assets in U.S. dollar-denominated securities of foreign issuers based in developed countries. For this purpose, foreign securities include, but are not limited to, foreign convertible securities and non-convertible income-producing securities, foreign equity securities (including preferred securities of foreign issuers), foreign bank obligations, and obligations of foreign governments or their subdivisions, agencies and instrumentalities, international agencies and supranational entities. For this purpose, foreign securities do not include American Depositary Receipts (ADRs) or securities guaranteed by a United States person (*i.e.*, the Fund does not count these securities for purposes of the 20% limitation noted above), but may include foreign securities in the form of Global Depositary Receipts (GDRs) or other securities representing underlying shares of foreign issuers. See Investment Objective and Strategies Portfolio Contents Foreign (Non-U.S.) Investments.

Restricted Securities

The Fund may invest without limit in securities that have not been registered for public sale in the U.S. or relevant non-U.S. jurisdiction, including, without limitation, securities eligible for purchase and sale pursuant to Rule 144A under the Securities Act of 1933, as amended (the Securities Act), or relevant provisions of applicable non-U.S. law, and other securities issued in private placements. Rule 144A under the Securities Act provides a non-exclusive safe harbor exemption from the registration requirements of the Securities Act for the resale of certain restricted securities to certain qualified institutional buyers, such as the Fund. Restricted securities may be deemed illiquid and thus may be subject to the Fund's limit on investments in illiquid securities, although the Fund may determine that certain restricted securities are liquid in accordance with procedures adopted by the Board of Trustees.

Leverage

The Fund currently utilizes leverage through its outstanding ARPS. As of May 31, 2013, the aggregate dollar amount (*i.e.*, liquidation preference) of the Fund's outstanding ARPS was \$274,000,000, which then represented approximately 32.10% of the Fund's total assets (including assets attributable to the ARPS). Information regarding the terms and features of the ARPS is provided under Description of Capital Structure in this prospectus.

Table of Contents

The Fund may issue additional preferred shares to add leverage to its portfolio. The Fund may also add leverage to its portfolio by utilizing reverse repurchase agreements, dollar rolls or other forms of borrowings, such as bank loans or commercial paper or other credit facilities, although these forms of leverage will generally be used, if at all, as a substitute for, rather than in addition to, the leverage obtained through the issuance of Preferred Shares. The Fund may also enter into transactions other than those noted above that may give rise to a form of leverage including, among others, futures and forward contracts, credit default swaps, total return swaps and other derivative transactions, loans of portfolio securities, short sales and when-issued, delayed delivery and forward commitment transactions.

Depending upon market conditions and other factors, the Fund may or may not determine to add leverage following an offering to maintain or increase the total amount of leverage (as a percentage of the Fund's total assets) that the Fund currently maintains, taking into account the additional assets raised through the issuance of Common Shares in such offering. The Fund utilizes leverage opportunistically and may choose to increase or decrease, or eliminate entirely, its use of leverage over time and from time to time based on AGI U.S.'s assessment of the yield curve environment, interest rate trends, market conditions and other factors. If the Fund determines to add leverage following an offering, it is not possible to predict with accuracy the precise amount of leverage that would be added, in part because it is not possible to predict the number of Common Shares that ultimately will be sold in an offering or series of offerings. To the extent that the Fund does not add additional leverage following an offering, the Fund's total amount of leverage as a percentage of its total assets will decrease, which could result in a reduction of investment income available for distribution to holders of the Common Shares (Common Shareholders).

The Fund's net assets attributable to its Preferred Shares and the net proceeds the Fund obtains from reverse repurchase agreements or other forms of leverage utilized, if any, will be invested in accordance with the Fund's investment objective and policies as described in this prospectus and any Prospectus Supplement. So long as the rate of return, net of applicable Fund expenses, on the debt obligations and other investments purchased by the Fund exceeds the dividend rates payable on the Preferred Shares together with the costs to the Fund of other leverage it utilizes, the investment of the Fund's net assets attributable to leverage will generate more income than will be needed to pay the costs of the leverage. If so, and all other things being equal, the excess may be used to pay higher dividends to Common Shareholders than if the Fund were not so leveraged.

Regarding the expenses associated with the Fund's leverage, the terms of the ARPS provide that they would ordinarily pay dividends at a rate set at auctions held every seven days, subject to a maximum applicable rate calculated as a function of the ARPS then-current

Table of Contents

rating and a reference interest rate. However, the weekly auctions for the ARPS, as well as auctions for similar preferred shares of other closed-end funds in the U.S., have failed since February 2008, and the dividend rates on the ARPS since that time have been paid at the maximum applicable rate (*i.e.* a multiple of a reference rate, which is the applicable

AA Financial Composite Commercial Paper Rate (for a dividend period of fewer than 184 days) or the applicable Treasury Index Rate (for a dividend period of 184 days or more)). In July 2012, Moody's, one of the two ratings agencies that provides ratings for the Fund's ARPS, downgraded its rating of the ARPS from Aaa to A1 pursuant to a revised ratings methodology adopted by Moody's. Under the Fund's Bylaws, this resulted in an increase in the multiple used to calculate the maximum applicable rate from 150% to 200%, thereby increasing the dividend rate payable to ARPS holders and increasing the expenses to Common Shareholders associated with the Fund's leverage. See Use of Leverage and Description of Capital Structure. The Fund expects that the ARPS will continue to pay dividends at the maximum applicable rate for the foreseeable future and cannot predict whether or when the auction markets for the ARPS may resume normal functioning. See Principal Risks of the Fund Leverage Risk, Principal Risks of the Fund Additional Risks Associated with the Fund's Preferred Shares and Description of Capital Structure for more information.

Leveraging is a speculative technique and there are special risks and costs involved. The Fund cannot assure you that its Preferred Shares and use of any other forms of leverage (such as the use of reverse repurchase agreements or derivatives strategies), if any, will result in a higher yield on your Common Shares. When leverage is used, the net asset value and market price of the Common Shares and the yield to Common Shareholders will be more volatile. See Principal Risks of the Fund Leverage Risk. In addition, dividend, interest and other expenses borne by the Fund with respect to its Preferred Shares and its use any other forms of leverage are borne by the Common Shareholders (and not by the holders of Preferred Shares) and result in a reduction of the net asset value of the Common Shares. In addition, because the fees received by the Investment Manager (defined below) and by the Sub-Adviser are based on the total managed assets of the Fund (including any assets attributable to any preferred shares or other forms of leverage of the Fund that may be outstanding), the Investment Manager and the Sub-Adviser have a financial incentive for the Fund to have preferred shares outstanding and to use certain other forms of leverage (*e.g.*, reverse repurchase agreements and other borrowings), which may create a conflict of interest between the Investment Manager and the Sub-Adviser, on the one hand, and the Common Shareholders, on the other hand.

Under the 1940 Act, the Fund is not permitted to issue new preferred shares unless immediately after such issuance the value of the Fund's total net assets (as defined below) is at least 200% of the liquidation value of the outstanding Preferred Shares and the newly issued

Table of Contents

preferred shares plus the aggregate amount of any senior securities of the Fund representing indebtedness (*i.e.*, such liquidation value plus the aggregate amount of senior securities representing indebtedness may not exceed 50% of the Fund's total net assets). In addition, the Fund is not permitted to declare any cash dividend or other distribution on its Common Shares unless, at the time of such declaration, the value of the Fund's total net assets satisfies the above-referenced 200% coverage requirement.

The 1940 Act also generally prohibits the Fund from engaging in most forms of leverage representing indebtedness other than preferred shares (including the use of reverse repurchase agreements, dollar rolls, bank loans, commercial paper or other credit facilities, credit default swaps and other derivative transactions, loans of portfolio securities, short sales and when-issued, delayed delivery and forward commitment transactions, to the extent that these instruments are not covered as described below) unless immediately after the issuance of the leverage the Fund has satisfied the asset coverage test with respect to senior securities representing indebtedness prescribed by the 1940 Act; that is, the value of the Fund's total assets less all liabilities and indebtedness not represented by senior securities (for these purposes, "total net assets") is at least 300% of the senior securities representing indebtedness (effectively limiting the use of leverage through senior securities representing indebtedness to 33 1/3% of the Fund's total net assets, including assets attributable to such leverage). The Fund is not permitted to declare any cash dividend or other distribution on its Common Shares unless, at the time of such declaration, the 300% asset coverage requirement described above is satisfied. The Fund may (but is not required to) cover its commitments under reverse repurchase agreements, dollar rolls, derivatives and certain other instruments by the segregation of liquid assets, or by entering into offsetting transactions or owning positions covering its obligations. For instance, the Fund may cover its position in a reverse repurchase agreement by segregating liquid assets at least equal in amount to its forward purchase commitment. To the extent that certain of these instruments are so covered, they will not be considered "senior securities" under the 1940 Act and therefore will not be subject to the 300% asset coverage requirement otherwise applicable to forms of leverage used by the Fund. However, reverse repurchase agreements and other such instruments, even if covered, may represent a form of economic leverage and create special risks. The use of these forms of leverage increases the volatility of the Fund's investment portfolio and could result in larger losses to Common Shareholders than if these strategies were not used. See "Principal Risks of the Fund" Leverage Risk. Failure to maintain certain asset coverage requirements could result in an event of default under certain borrowings that may be used by the Fund.

The Fund's ability to utilize leverage is also limited by asset coverage requirements and other guidelines imposed by rating agencies (currently Moody's and Fitch) that provide ratings for the Preferred

Table of Contents

Shares, which may be more restrictive than the limitations imposed by the 1940 Act noted above. See Description of Capital Structure for more information.

The Fund also may borrow money in order to repurchase its shares or as a temporary measure for extraordinary or emergency purposes, including for the payment of dividends or the settlement of securities transactions which otherwise might require untimely dispositions of portfolio securities held by the Fund.

Investment Manager

Allianz Global Investors Fund Management LLC (the Investment Manager) serves as the investment manager of the Fund. Subject to the supervision of the Board of Trustees of the Fund (the Board), the Investment Manager is responsible for managing, either directly or through others selected by it, the investment activities of the Fund and the Fund's business affairs and other administrative matters. The Investment Manager receives an annual fee from the Fund, payable monthly, in an amount equal to 0.70% of the Fund's average daily total managed assets. Total managed assets means the total assets of the Fund (including any assets attributable to any preferred shares or other forms of leverage of the Fund that may be outstanding) minus accrued liabilities (other than liabilities representing leverage). The Investment Manager is located at 1633 Broadway, New York, New York 10019. Organized in 2000, the Investment Manager provides investment management and advisory services to a number of closed-end and open-end investment company clients. The Investment Manager is a wholly-owned indirect subsidiary of Allianz SE, a publicly-traded European insurance and financial services company. As of March 31, 2013, the Investment Manager had approximately \$55 billion in assets under management.

The Investment Manager has retained its affiliate, AGI U.S., as a sub-adviser to manage the Fund's portfolio investments. See Sub-Adviser below.

Sub-Adviser

AGI U.S. serves as the Fund's sub-adviser responsible for managing the Fund's portfolio investments. Subject to the supervision of the Investment Manager, AGI U.S. has full investment discretion and makes all determinations with respect to the investment of the Fund's assets.

Effective January 1, 2013, the Subadviser, formerly known as Allianz Global Investors Capital LLC, changed its name to Allianz Global Investors U.S. LLC in connection with reorganization transactions within the Allianz Global Investors U.S. business. The reorganizations involved the combination of four affiliated investment advisory firms with and into the Subadviser, including Allianz Global Investors Managed Accounts LLC and Allianz Global Investors Solutions LLC, each effective January 1, 2013, and RCM Capital Management LLC and Caywood-Scholl Capital Management LLC, each effective April 1, 2013. The reorganizations did not result in any changes to the Fund's portfolio management team at the Subadviser or in the Fund's day-to-day investment management.

Table of Contents

AGI U.S. is registered as an investment adviser with the Securities and Exchange Commission (SEC) and is organized as a Delaware limited liability company. Its principal place of business is located at 1633 Broadway, New York, New York 10019. AGI U.S. also has an office located at 600 West Broadway, San Diego, California 92101. AGI U.S. provides investment management services across a broad class of assets including equity, fixed income, futures and options, convertibles and other securities and derivative instruments. AGI U.S.'s primary business is to provide discretionary advisory services to institutional clients through its separate account management services.

In addition, AGI U.S. provides discretionary investment advisory services to a variety of commingled funds (including SEC registered open-end investment companies, SEC registered closed-end investment companies and other commingled funds that are not registered with the SEC), which may be sponsored or established by AGI U.S., its affiliates or by unaffiliated third parties. AGI U.S. also participates as a non-discretionary investment adviser providing investment models to unaffiliated third parties. As of April 30, 2013, AGI U.S. had assets under management of approximately \$49 billion.

Dividends and Distributions

The Fund makes regular monthly cash distributions to Common Shareholders at a rate based upon the projected performance of the Fund. Distributions can only be made from net investment income after paying any accrued dividends to holders of the Preferred Shares. The dividend rate that the Fund pays depends on a number of factors, including dividends payable on the Preferred Shares and the expenses of any other leveraging transactions. The net income of the Fund consists of all income paid or accrued on portfolio assets less all expenses of the Fund. Expenses of the Fund are accrued each day. Over time, substantially all the net investment income of the Fund will be distributed. At least annually, the Fund also intends to distribute to you your pro rata share of any available net capital gain. Although it does not now intend to do so, the Board of Trustees may change the Fund's dividend policy and the amount or timing of the distributions based on a number of factors, including the amount of the Fund's undistributed net investment income and historical and projected investment income and the amount of the expenses and dividend rates on any outstanding Preferred Shares.

To permit the Fund to maintain a more stable monthly distribution, the Fund may distribute less than the entire amount of net investment income earned in a particular period. The undistributed net investment income would be available to supplement future distributions. As a result, the distributions paid by the Fund for any particular monthly period may be more or less than the amount of net investment income actually earned by the Fund during the period. Undistributed net investment income will be added to the Fund's net asset value and, correspondingly, distributions from undistributed net investment income will be deducted from the Fund's net asset value.

Table of Contents

The tax treatment and characterization of the Fund's distributions may vary significantly from time to time because of the varied nature of the Fund's investments. To the extent required by the 1940 Act and other applicable laws, absent an exemption, a notice will accompany each monthly distribution with respect to the estimated source (as between net income and gains) of the distribution made. The tax characterization of the Fund's distributions made in a taxable year cannot finally be determined until at or after the end of the year. As a result, there is a possibility that the Fund may make total distributions during a taxable year in an amount that exceeds the Fund's net investment income and net realized capital gains for the relevant year (including as reduced by any capital loss carry-forwards). For example, the Fund may distribute amounts early in the year that are derived from short-term capital gains, but incur net short-term capital losses later in the year, thereby offsetting short-term capital gains out of which distributions have already been made by the Fund. In such a situation, the amount by which the Fund's total distributions exceed net investment income and net realized capital gains would generally be treated as a tax-free return of capital up to the amount of a shareholder's tax basis in his or her Common Shares, with any amounts exceeding such basis treated as gain from the sale of Common Shares. In general terms, a return of capital would occur where a Fund distribution (or portion thereof) represents a return of a portion of your investment, rather than net income or capital gains generated from your investment during a particular period. Although return of capital distributions may not be taxable, such distributions would reduce the basis of a shareholder's Common Shares and therefore may increase a shareholder's tax liability for capital gains upon a sale of Common Shares. See Tax Matters. The Fund will send shareholders detailed tax information with respect to Fund distributions annually.

The 1940 Act currently limits the number of times the Fund may distribute long-term capital gains in any tax year, which may increase the variability of the Fund's distributions and result in certain distributions comprising more or less heavily than others of long-term capital gains eligible for favorable income tax rates.

Unless a Common Shareholder elects to receive distributions in cash, all distributions of Common Shareholders whose shares are registered with the plan agent will be automatically reinvested in additional Common Shares of the Fund under the Fund's Dividend Reinvestment Plan. See Distributions and Dividend Reinvestment Plan.

Shareholder Servicing Agent, Custodian and Transfer Agent

The Investment Manager, at its own expense, has retained UBS Securities LLC to serve as a shareholder servicing agent for the Fund. Brown Brothers Harriman & Co. serves as custodian of the Fund's assets and also provides certain fund accounting, sub-administrative and compliance services to the Investment Manager on behalf of the Fund. American Stock Transfer and Trust Company, LLC serves as

Table of Contents

the Fund's transfer agent and dividend disbursement agent. See Shareholder Servicing Agent, Custodian and Transfer Agent.

Listing

The Fund's outstanding Common Shares are listed on the New York Stock Exchange (NYSE) under the symbol NCZ, as will be the Common Shares offered in this prospectus, subject to notice of issuance.

Market Price of Shares

Shares of closed-end investment companies frequently trade at prices lower than net asset value. Shares of closed-end investment companies have during some periods traded at prices higher than net asset value and during other periods traded at prices lower than net asset value. The Fund cannot assure you that Common Shares will trade at a price equal to or higher than net asset value in the future. Net asset value will be reduced immediately following an offering by any sales load and/or commissions and the amount of offering expenses paid or reimbursed by the Fund. See Use of Proceeds. In addition to net asset value, market price may be affected by factors relating to the Fund such as dividend levels and stability (which will in turn be affected by Fund expenses, including dividends paid on the Fund's Preferred Shares and the costs of any other leverage used by the Fund, levels of interest payments by the Fund's portfolio holdings, levels of appreciation/depreciation of the Fund's portfolio holdings, regulation affecting the timing and character of Fund distributions and other factors), portfolio credit quality, liquidity, call protection, market supply and demand and similar factors relating to the Fund's portfolio holdings. See Use of Leverage, Principal Risks of the Fund, Description of Shares and Repurchase of Common Shares; Conversion to Open-End Fund in this prospectus, and see Repurchase of Common Shares; Conversion to Open-End Fund in the Statement of Additional Information. The Common Shares are designed for long-term investors and should not be treated as trading vehicles.

Principal Risks of the Fund

The following is a summary of the principal risks associated with an investment in Common Shares of the Fund. Investors should also refer to Principal Risks of the Fund in this prospectus and Investment Objective and Policies in the Statement of Additional Information for a more detailed explanation of these and other risks associated with investing in the Fund.

Market Discount Risk. As with any stock, the price of the Fund's Common Shares will fluctuate with market conditions and other factors. If you sell your Common Shares, the price received may be more or less than your original investment. Net asset value of the Fund's Common Shares will be reduced immediately following an offering by any sales load and/or commissions and offering expenses paid or reimbursed by the Fund in connection with such offering. The completion of an offering may result in an immediate dilution of the net asset value per Common Share for all existing Common Shareholders. The Common Shares are designed for long-term investors and should not be treated as trading vehicles. Shares of

Table of Contents

closed-end management investment companies frequently trade at a discount from their net asset value. The Common Shares may trade at a price that is less than the offering price for Common Shares issued pursuant to an offering. This risk may be greater for investors who sell their Common Shares relatively shortly after completion of an offering.

Market Risk. The market price of securities owned by the Fund may go up or down, sometimes rapidly or unpredictably. Securities may decline in value due to factors affecting securities markets generally or particular industries represented in the securities markets. The value of a security may decline due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously.

Issuer Risk. The value of securities may decline for a number of reasons that directly relate to the issuer, such as its financial strength, management performance, financial leverage and reduced demand for the issuer's goods and services, as well as the historical and prospective earnings of the issuer and the value of its assets. These risks can apply to the Common Shares issued by the Fund and to the issuers of securities and other instruments in which the Fund invests.

Convertible Securities Risk. The Fund may invest without limit in convertible securities, which may include, among others, bonds, debentures, notes, preferred stocks or other securities. Convertible securities will ordinarily constitute a principal component of the Fund's investment program. Under normal circumstances, the Fund will invest at least 50% of its total assets in convertible securities. Convertible securities generally offer lower interest or dividend yields than non-convertible debt securities of similar quality. The market values of convertible securities tend to decline as interest rates increase and, conversely, to increase as interest rates decline. However, a convertible security's market value tends to reflect the market price of the common stock of the issuing company when that stock price approaches or is greater than the convertible security's conversion price. The conversion price is defined as the predetermined price at which the convertible security could be exchanged for the associated stock. As the market price of the underlying common stock declines, the price of the convertible security tends to be influenced more by the yield of the convertible security. Thus, it may not decline in price to the same extent as the underlying common stock. In the event of a liquidation of the issuing company, holders of convertible securities would be paid before the company's common stockholders but after holders of any senior debt.

Table of Contents

obligations of the company. Consequently, the issuer's convertible securities generally entail less risk than its common stock but more risk than its debt obligations. Convertible securities are often rated below investment grade or not rated because they fall below debt obligations and just above common equity in order of preference or priority on the issuer's balance sheet. See High Yield Risk.

Synthetic Convertible Securities Risk. The Fund may invest without limit in synthetic convertible securities, which are created through a combination of separate securities that possess the two principal characteristics of a traditional convertible security, *i.e.*, an income-producing security (income-producing component) and the right to acquire an equity security (convertible component). The income-producing component is achieved by investing in non-convertible, income-producing securities such as bonds, preferred stocks and money market instruments. The convertible component is achieved by purchasing warrants or options to buy common stock at a certain exercise price, or options on a stock index. The values of synthetic convertible securities will respond differently to market fluctuations than a traditional convertible security because a synthetic convertible is composed of two or more separate securities or instruments, each with its own market value. Synthetic convertible securities are also subject to the risks associated with derivatives. See Principal Risks of the Fund Derivatives Risk. In addition, if the value of the underlying common stock or the level of the index involved in the convertible element falls below the strike price of the warrant or option, the warrant or option may lose all value.

Credit Risk. Credit risk is the risk that one or more of the Fund's investments in debt securities or other instruments will decline in price, or fail to pay interest, liquidation value or principal when due, because the issuer of the obligation or the issuer of a reference security experiences an actual or perceived decline in its financial status.

High Yield Risk. The Fund may invest without limit in debt instruments that are, at the time of purchase, rated below investment grade or unrated but determined by AGI U.S. to be of comparable quality, and may invest without limit in securities of any rating.

In general, lower rated debt securities carry a greater degree of risk that the issuer will lose its ability to make interest and principal payments, which could have a negative effect on the net asset value of the Fund's Common Shares or Common Share dividends. Securities of below investment grade quality are regarded as having predominantly speculative characteristics with respect to capacity to pay interest and repay principal, and are commonly referred to as high yield securities or junk bonds. High yield securities involve a greater risk of default and their prices are generally more volatile and sensitive to actual or perceived negative developments, such as a decline in the issuer's revenues or revenues of underlying borrowers or a general economic downturn, than are the prices of higher grade

Table of Contents

securities. Debt securities in the lowest investment grade category also may be considered to possess some speculative characteristics by certain rating agencies. The Fund may purchase distressed securities that are in default or the issuers of which are in bankruptcy, which involve heightened risks. See Principal Risks of the Fund Distressed and Defaulted Securities Risk. An economic downturn could severely affect the ability of issuers (particularly those that are
