NEW YORK COMMUNITY BANCORP, INC.

NOTES TO THE UNAUDITED CONSOLIDATED FINANCIAL STATEMENTS

Note 1. Organization and Basis of Presentation

Organization

Formerly known as Queens County Bancorp, Inc., New York Community Bancorp, Inc. (on a stand-alone basis, the Parent Company or, collectively with its subsidiaries, the Company) was organized under Delaware law on July 20, 1993 and is the holding company for New York Community Bank and New York Commercial Bank (hereinafter referred to as the Community Bank and the Commercial Bank, respectively, and collectively as the Banks). In addition, for the purpose of these Consolidated Financial Statements, the Community Bank and the Commercial Bank refer not only to the respective banks but also to their respective subsidiaries.

The Community Bank is the primary banking subsidiary of the Company. Founded on April 14, 1859 and formerly known as Queens County Savings Bank, the Community Bank converted from a state-chartered mutual savings bank to the capital stock form of ownership on November 23, 1993, at which date the Company issued its initial offering of common stock (par value: \$0.01 per share) at a price of \$25.00 per share (\$0.93 per share on a split-adjusted basis, reflecting the impact of nine stock splits between 1994 and 2004). The Commercial Bank was established on December 30, 2005.

Reflecting its growth through acquisitions, the Community Bank currently operates 225 branches, two of which operate directly under the Community Bank name. The remaining 223 Community Bank branches operate through seven divisional banks: Queens County Savings Bank, Roslyn Savings Bank, Richmond County Savings Bank, and Roosevelt Savings Bank in New York; Garden State Community Bank in New Jersey; AmTrust Bank in Florida and Arizona; and Ohio Savings Bank in Ohio.

The Commercial Bank currently operates 30 branches in Manhattan, Queens, Brooklyn, Westchester County, and Long Island (all in New York), including 18 branches that operate under the name Atlantic Bank.

On September 17, 2015, the Company submitted an application to the FDIC and the New York State Department of Financial Services (NYSDFS) requesting approval to merge the Commercial Bank with and into the Community Bank. The merger was approved by the NYSDFS on September 16, 2016 and is currently pending the approval of the FDIC. The merger of the Company's two bank subsidiaries is not expected to impact either bank's customers or employees.

On October 29, 2015, the Company announced the signing of a definitive merger agreement with Astoria Financial Corporation (Astoria Financial). The merger was approved by shareholders of both companies on April 26, 2016. Under the merger agreement, either the Company or Astoria Financial may terminate the merger agreement, without penalty, if the merger has not occurred by December 31, 2016. Based on discussions with its regulators, the Company does not expect to receive the regulatory approvals required to consummate the Astoria transaction by that date. Astoria Financial and the Company remain committed to the transaction, but any extension of the end date or other modification under the merger agreement is subject to the discretionary approval of the Board of Directors of each company, and there can be no assurance that each Board of Directors will agree to any such extension or other modification.

Basis of Presentation

The following is a description of the significant accounting and reporting policies that the Company and its wholly-owned subsidiaries follow in preparing and presenting their consolidated financial statements, which conform to U.S. generally accepted accounting principles (GAAP) and to general practices within the banking industry. The preparation of financial statements in conformity with GAAP requires the Company to make estimates and judgments that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the consolidated financial statements, and the reported amounts of revenues and expenses during the reporting period. Estimates that are particularly susceptible to change in the near term are used in connection with the determination of the allowances for loan losses; the valuation of mortgage servicing rights (MSRs); the evaluation of goodwill for impairment; the evaluation of other-than-temporary impairment (OTTI) on securities; and the evaluation of the need for a valuation allowance on the Company's deferred tax assets.

The accompanying consolidated financial statements include the accounts of the Company and other entities in which the Company has a controlling financial interest. All inter-company accounts and transactions are eliminated in consolidation. The Company currently has certain unconsolidated subsidiaries in the form of wholly-owned statutory business trusts, which were formed to issue guaranteed capital debentures (capital securities). Please see Note 7, Borrowed Funds, for additional information regarding these trusts.

When necessary, certain reclassifications are made to prior-year amounts to conform to the current-year presentation. The presentation of long-term borrowings and Federal Home Loan Bank stock in the Consolidated Statements of Cash Flows for the nine months ended September 30, 2015 are presented on a gross basis to conform to the presentation for the nine months ended September 30, 2016.

Table of Contents**Note 2. Computation of Earnings per Share**

Basic earnings per share (EPS) is computed by dividing net income by the weighted average number of common shares outstanding during the period. Diluted EPS is computed using the same method as basic EPS, however, the computation would reflect any potential dilution that would occur if outstanding in-the-money stock options were exercised and converted into common stock.

Unvested stock-based compensation awards containing non-forfeitable rights to dividends are considered participating securities, and therefore are included in the two-class method for calculating EPS. Under the two-class method, all earnings (distributed and undistributed) are allocated to common shares and participating securities based on their respective rights to receive dividends. The Company grants restricted stock to certain employees under its stock-based compensation plans. Recipients receive cash dividends during the vesting periods of these awards, including on the unvested portion of such awards. Since these dividends are non-forfeitable, the unvested awards are considered participating securities and therefore have earnings allocated to them.

The following table presents the Company's computation of basic and diluted EPS for the periods indicated:

	Three Months Ended September 30,		Nine Months Ended September 30,	
(in thousands, except share and per share data)	2016	2015	2016	2015
Net income	\$ 125,299	\$ 114,688	\$ 381,668	\$ 357,651
Less: Dividends paid on and earnings allocated to participating securities	(973)	(834)	(2,928)	(2,594)
Earnings applicable to common stock	\$ 124,326	\$ 113,854	\$ 378,740	\$ 355,057

Total securities available for sale	\$ 199,071	\$ 7,988	\$ 2,804	\$ 204,255

The following tables summarize the Company's portfolio of securities held to maturity at September 30, 2016 and December 31, 2015:

(in thousands)	September 30, 2016				
	Amortized Cost	Carrying Amount	Gross Unrealized Gain	Gross Unrealized Loss	Fair Value
Mortgage-Related Securities:					
GSE certificates	\$ 2,231,754	\$ 2,231,754	\$ 156,154	\$	\$ 2,387,908
GSE CMOs ⁽¹⁾	1,119,704	1,119,704	75,607		1,195,311
Total mortgage-related securities	\$ 3,351,458	\$ 3,351,458	\$ 231,761	\$	\$ 3,583,219
Other Securities:					
GSE debentures	\$ 88,527	\$ 88,527	\$ 6,084	\$	\$ 94,611
Municipal bonds	72,187	72,187	2,698		74,885
Corporate bonds	74,101	74,101	10,753		84,854
Capital trust notes	74,277	65,652	3,918	14,053	55,517
Total other securities	\$ 309,092	\$ 300,467	\$ 23,453	\$ 14,053	\$ 309,867
Total securities held to maturity ⁽²⁾	\$ 3,660,550	\$ 3,651,925	\$ 255,214	\$ 14,053	\$ 3,893,086

(1) Collateralized mortgage obligations.

(2) Held-to-maturity securities are reported at a carrying amount equal to amortized cost less the non-credit portion of OTTI recorded in Accumulated Other Comprehensive Loss (AOCL). At September 30, 2016, the non-credit portion of OTTI recorded in AOCL was \$8.6 million, pre-tax.

Table of Contents

(in thousands)	December 31, 2015				
	Amortized Cost	Carrying Amount	Gross Unrealized Gain	Gross Unrealized Loss	Fair Value
Mortgage-Related Securities:					
GSE certificates	\$ 2,269,828	\$ 2,269,828	\$ 76,827	\$ 4,722	\$ 2,341,933
GSE CMOs	1,325,033	1,325,033	53,236	57	1,378,212
Total mortgage-related securities	\$ 3,594,861	\$ 3,594,861	\$ 130,063	\$ 4,779	\$ 3,720,145
Other Securities:					
GSE debentures	\$ 2,159,856	\$ 2,159,856	\$ 23,892	\$ 7,568	\$ 2,176,180
Municipal bonds	75,317	75,317	262	1,084	74,495
Corporate bonds	73,756	73,756	10,503		84,259
Capital trust notes	74,317	65,600	3,750	15,900	53,450
Total other securities	\$ 2,383,246	\$ 2,374,529	\$ 38,407	\$ 24,552	\$ 2,388,384
Total securities held to maturity ⁽¹⁾	\$ 5,978,107	\$ 5,969,390	\$ 168,470	\$ 29,331	\$ 6,108,529

(1) Held-to-maturity securities are reported at a carrying amount equal to amortized cost less the non-credit portion of OTTI recorded in AOCL. At December 31, 2015, the non-credit portion of OTTI recorded in AOCL was \$8.7 million, pre-tax.

At September 30, 2016 and December 31, 2015, respectively, the Company had \$586.4 million and \$664.0 million of Federal Home Loan Bank of New York (FHLB-NY) stock, at cost. In order to have access to the funding provided by the FHLB-NY, the Company is required to maintain an investment in FHLB-NY stock.

The following table summarizes the gross proceeds and gross realized gains from the sale of available-for-sale securities during the nine months ended September 30, 2016 and 2015:

(in thousands)	For the Nine Months Ended September 30,	
	2016	2015
Gross proceeds	\$ 264,413	\$ 256,900
Gross realized gains	413	400

In addition, during the nine months ended September 30, 2015, the Company sold held-to-maturity securities with gross proceeds of \$19.7 million and gross realized gains of \$543,000, all of which were securities on which the Company had collected a substantial portion (at least 85%) of the initial principal balance. No comparable sales occurred in the first nine months of 2016.

In the following table, the beginning balance represents the credit loss component for debt securities on which OTTI occurred prior to January 1, 2016. For credit-impaired debt securities, OTTI recognized in earnings after that date is presented as an addition in two components, based upon whether the current period is the first time a debt security was credit-impaired (initial credit impairment) or is not the first time a debt security was credit-impaired (subsequent

credit impairment).

(in thousands)		For the Nine Months Ended September 30, 2016
Beginning credit loss amount as of January 1, 2016	\$	198,766
Add: Initial other-than-temporary credit losses		
Subsequent other-than-temporary credit losses		
Amount previously recognized in AOCL		
Less: Realized losses for securities sold		
Securities intended or required to be sold		
Increase in cash flows on debt securities		135
Ending credit loss amount as of September 30, 2016	\$	198,631

Table of Contents

The following table summarizes the carrying amounts and estimated fair values of held-to-maturity mortgage-backed securities and debt securities, and the amortized costs and estimated fair values of available-for-sale securities, at September 30, 2016, by contractual maturity.

At September 30, 2016									
(dollars in thousands)	Mortgage-Related Securities	Average Yield	U.S. Treasury and GSE Obligations	Average Yield	State, County, and Municipal	Average Yield (1)	Other Debt Securities (2)	Average Yield	Fair Value
Held-to-Maturity Securities:									
Due within one year	\$		%\$		%\$	109	2.96%	\$	%\$ 109
Due from one to five years	655,716	3.73	66,604	4.14			47,970	3.32	830,343
Due from five to ten years	2,338,989	3.09	21,923	3.52			16,447	9.05	2,550,076
Due after ten years	356,753	2.97			72,078	2.88	75,336	5.25	512,558
Total securities held to maturity	\$ 3,351,458	3.20%	\$ 88,527	3.99%	\$ 72,187	2.88%	\$ 139,753	5.03%	\$ 3,893,086

Table of Contents

An OTTI loss on impaired securities must be fully recognized in earnings if an investor has the intent to sell the debt security, or if it is more likely than not that the investor will be required to sell the debt security before recovery of its amortized cost. However, even if an investor does not expect to sell a debt security, it must evaluate the expected cash flows to be received and determine if a credit loss has occurred. In the event that a credit loss occurs, only the amount of impairment associated with the credit loss is recognized in earnings. Amounts of impairment relating to factors other than credit losses are recorded in AOCL.

At September 30, 2016, the Company had unrealized losses on certain capital trust notes and equity securities.

The Company reviews quarterly financial information related to its investments in capital trust notes, as well as other information that is released by each of the issuers of such notes, to determine their continued creditworthiness. The Company continues to monitor these investments and currently estimates that the present value of expected cash flows is not less than the amortized cost of the securities. It is possible that these securities will perform worse than is currently expected, which could lead to adverse changes in cash flows from these securities and potential OTTI losses in the future. Future events that could trigger material unrecoverable declines in the fair values of the Company's investments, and thus result in potential OTTI losses, include, but are not limited to: government intervention; deteriorating asset quality and credit metrics; significantly higher levels of default and loan loss provisions; losses in value on the underlying collateral; net operating losses; and illiquidity in the financial markets.

The Company considers a decline in the fair value of equity securities to be other than temporary if the Company does not expect to recover the entire amortized cost basis of the security. The unrealized losses on the Company's equity securities at September 30, 2016 were caused by market volatility. The Company evaluated the near-term prospects of recovering the fair value of these securities, together with the severity and duration of impairment to date, and determined that they were not other than temporarily impaired. Nonetheless, it is possible that these equity securities will perform worse than is currently expected, which could lead to adverse changes in their fair value, or to the failure of the securities to fully recover in value as currently anticipated by management. Either event could cause the Company to record an OTTI loss in a future period. Events that could trigger a material decline in the fair value of these securities include, but are not limited to, deterioration in the equity markets; a decline in the quality of the loan portfolio of the issuer in which the Company has invested; and the recording of higher loan loss provisions and net operating losses by such issuer.

The investment securities designated as having a continuous loss position for twelve months or more at September 30, 2016 consisted of five capital trust notes. At December 31, 2015, the investment securities designated as having a continuous loss position for twelve months or more consisted of seven agency debt securities, five capital trust notes, and two agency mortgage-backed securities. At September 30, 2016 and December 31, 2015, the combined market value of the respective securities represented unrealized losses of \$16.5 million and \$24.9 million. At September 30, 2016, the fair value of securities having a continuous loss position for twelve months or more was 37.8% below the collective amortized cost of \$43.7 million. At December 31, 2015, the fair value of such securities was 2.0% below the collective amortized cost of \$1.2 billion.

Table of Contents**Note 5: Loans**

The following table sets forth the composition of the loan portfolio at September 30, 2016 and December 31, 2015:

	September 30, 2016		December 31, 2015	
	Percent of		Percent of	
	Non-Covered		Non-Covered	
	Loans Held		Loans Held	
	for Investment		for Investment	
	Amount		Amount	
(dollars in thousands)				
Non-Covered Loans Held for Investment:				
Mortgage Loans:				
Multi-family	\$ 27,066,459	72.49%	\$ 27,066,459	72.49%
	Shares	Price		
	(In thousands)			
Options outstanding at March 31, 2010	3,218	\$ 1.77		
Exercised	(14)	1.39		
Expired	(14)	1.80		
Options outstanding at June 30, 2010	3,190	\$ 1.77		

At June 30, 2010, there were 885,000 shares of common stock available for grant under our 2007 Omnibus Incentive Plan.

Included in the options outstanding at June 30, 2010 are currently exercisable options to purchase 769,000 shares of our common stock with an exercise price per share of \$1.19 that, if remaining unexercised, are scheduled to expire in September 2011.

Common Stock Warrants

At June 30, 2010, there were outstanding warrants to purchase approximately 336,000 shares of our common stock with a weighted average exercise price per share of \$3.56. All of the outstanding warrants were exercisable at June 30, 2010 and had a weighted average remaining contractual life of approximately 0.6 years.

In July 2010, warrants to purchase 75,000 shares of our common stock at an exercise price per share of \$5.00 expired unexercised.

8. Business Segment Information

Edgar Filing: NEW YORK COMMUNITY BANCORP INC - Form 10-Q

We currently operate in three reportable segments: Roadway Sensors, Vehicle Sensors and Transportation Systems. The Roadway Sensors segment includes our Vantage and VersiCam vehicle detection systems for traffic intersection control, incident detection and certain highway traffic data collection applications. This segment also includes our Pico compact video detection system, which was designed primarily to respond to international video detection needs. The Vehicle Sensors segment includes our lane departure warning products and is comprised of all of our activities related to vehicle safety. The Transportation Systems segment includes transportation engineering and consulting services and the development of transportation management and traveler information systems for the ITS industry. The accounting policies of the reportable segments are the same as those described in the summary of significant accounting policies. Certain corporate expenses, including interest and amortization of intangible assets, are not allocated to the segments. The reportable segments are each managed separately because they manufacture and distribute distinct products or provide services with different processes. All segment revenues are derived from external customers.

Table of Contents

The following table sets forth selected unaudited consolidated financial information for our reportable segments for the three months ended June 30, 2010 and 2009:

	Roadway Sensors	Vehicle Sensors	Transportation Systems	Total
	(In thousands)			
Three Months Ended June 30, 2010				
Product revenue	\$ 7,693	\$ 1,628	\$	\$ 9,321
Service and other revenue		141	6,212	6,353
Stock-based compensation	9	7	14	30
Depreciation and amortization	56	21	51	128
Segment income (loss)	1,370	(182)	313	1,501
Three Months Ended June 30, 2009				
Product revenue	\$ 5,875	\$ 810	\$	\$ 6,685
Service and other revenue		248	7,701	7,949
Stock-based compensation	8	8	14	30
Depreciation and amortization	62	22	58	142
Segment income (loss)	362	(506)	534	390

The following table reconciles segment income to consolidated income before income taxes:

	Three Months Ended June 30,

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

This report, including the following discussion and analysis, contains forward-looking statements (within the meaning of the Private Securities Litigation Reform Act of 1995) that are based on our current expectations, estimates and projections about our business and our industry, and reflect management's beliefs and certain assumptions made by us based upon information available to us as of the date of this report. When used in this report and the information incorporated herein by reference, the words expect(s), feel(s), believe(s), should, will, may, anticipate(s), estimate(s) and similar expressions or variations of these words are intended to identify forward-looking statements. These forward-looking statements include, but are not limited to, statements regarding our anticipated growth, sales, revenue, expenses, profits, capital needs, competition, development plans, and manufacturing capabilities, the applications for and acceptance of our products and services, and the status of our facilities and product development. These statements are not guarantees of future performance and are subject to certain risks and uncertainties that could cause our actual results to differ materially from those projected. You should not place undue reliance on these forward-looking statements that speak only as of the date hereof. We encourage you to carefully review and consider the various disclosures made by us which describe certain factors which could affect our business, including in Risk Factors set forth in Part II, Item 1A of this report, before deciding to invest in our company or to maintain or increase your investment. We undertake no obligation to revise or update publicly any forward-looking statement for any reason, including to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events.

Overview

General. We are a leader in the traffic management market focused on the development and application of advanced technologies that reduce traffic congestion and improve the safety of surface transportation systems infrastructure. Additionally, we believe our products and services, in conjunction with sound traffic management, minimize the environmental impact of traffic congestion. By combining outdoor image processing, traffic engineering and information technology, we offer a broad range of Intelligent Transportation Systems (ITS) and driver safety solutions to customers in the United States (U.S.) and internationally.

Business Segments. We currently operate in three reportable segments: Roadway Sensors, Vehicle Sensors and Transportation Systems. The Roadway Sensors segment includes our Vantage, VersiCam and Pico vehicle detection systems for traffic intersection control, incident detection and certain highway traffic data collection applications, as well as our Abacus family of products. The Vehicle Sensors segment includes our lane departure warning (LDW) products, including our AutoVue LDW system, and is comprised of all of our activities related to in-vehicle safety. The Transportation Systems segment includes transportation engineering and consulting services, and the development of transportation management and traveler information systems for the ITS industry.

Our Roadway Sensors segment product line uses advanced image processing technology to capture and analyze video images through sophisticated algorithms, enabling vehicle detection and transmission of both video images and data using various communication technologies.

- Our Vantage video detection systems detect vehicle presence, count, speed and other traffic data used in traffic management systems. Our Vantage systems give traffic managers the ability to mitigate roadway congestion by modifying traffic signal timing or detecting incidents quickly.

Edgar Filing: NEW YORK COMMUNITY BANCORP INC - Form 10-Q

- VersiCam, our integrated camera and processor video detection system, is a cost-efficient video detection system for smaller intersections that require only a few detection points.
- Pico, our compact video detection system, was developed primarily to address international video detection needs, and was designed for easy installation and configuration.
- Our Abacus products take advantage of the large number of existing installed closed-circuit television video feeds monitoring roadways, signalized intersections, tunnels and bridges to allow for data collection and incident detection without the set-up and calibration required with other systems.

We believe that future growth domestically and internationally, particularly in developing countries, will be dependent in part on the continued adoption of above-ground video detection technologies, instead of traditional in-pavement loop technology, to manage traffic.

Table of Contents

Our Vehicle Sensors segment addresses the leading cause of roadway fatalities: lane change, roadway departure and rear-end collision accidents. We developed the world's first production LDW system and offer a proven system that is available as an original equipment manufacturer (OEM) and aftermarket option on heavy trucks worldwide and as an option in certain passenger cars. Our LDW products utilize video detection images to detect when a vehicle begins to drift toward an unintended lane change. When this occurs, the unit automatically emits a distinctive rumble strip or other audible warning sound, alerting the driver to make a correction. We believe that as a result of the expected 2013 European Union (EU) mandate for LDW and other active safety systems, and an overall awareness of the potential benefits of LDW, that we will experience an even higher degree of competition from a variety of tier-one OEM suppliers and other potential market entrants worldwide. While we believe that this increased competition validates the long-term market opportunity for LDW systems in commercial vehicles, it could also adversely affect our future LDW sales and margins. We are currently working with our European OEM customer base to establish long-term supply agreements that extend to 2013 and beyond in order to meet the anticipated increase in demand; however, we cannot assure you that our efforts will be successful or that the increase in demand will occur. We have entered into an exclusive license of our LDW technology to our strategic partner, Valeo Schalter and Sensoren GmbH (Valeo), for the passenger car market. Recently, we and our partner have experienced a greater degree of competition in the passenger car market, as several passenger car OEMs have introduced vehicle platforms with competing LDW systems. However, Valeo continues to pursue opportunities in the passenger car market.

In addition to our LDW systems, our Vehicle Sensors portfolio includes radar-based Forward Collision Warning (FCW) and Blind Spot Warning (BSW) systems for the North American truck market, and our SafetyDirect product, a system that reports driver performance data captured by our LDW system, and has the ability to relay this data directly to fleet operators through integration with the truck's existing fleet communications system. We offer the FCW and BSW features through the resale of Delphi's radar-based systems, for which we are the exclusive North American dealer, while SafetyDirect was internally developed. These products, together with our LDW products, combine to create a suite of active safety driver assistance features focused on reducing the number of motor vehicle crashes and the severity of crash-related injuries.

Our Transportation Systems segment includes transportation engineering and consulting services focused on the planning, design, development and implementation of software-based systems that integrate sensors, video surveillance, computers, and advanced communications equipment to enable public agencies to monitor, control and direct traffic flow, assist in the quick dispatch of emergency crews and distribute real-time information about traffic conditions. Our services include planning, design and implementation of surface transportation infrastructure systems. We perform analysis and study goods movement, commercial vehicle operations, travel demand forecasting and systems engineering, and identify mitigation measures to reduce traffic congestion. Historically, these services and systems have primarily been sold to local, state and national transportation agencies in the United States under a broad range of fixed price and cost plus fixed fee contracts; however, in the fiscal year ended March 31, 2010 (fiscal 2010), we began work on our first two overseas contract awards and plan to pursue additional international opportunities for our Transportation Systems segment.

Our Transportation Systems segment is largely dependent upon governmental funding and is affected by state and local budgetary issues. We believe the overall expansion of our Transportation Systems segment in the future will at least in part be dependent on the passage of a new Federal Highway Bill, which Congress is currently working on. We anticipate continued delays in the enactment of such a new bill, and until such time as a bill becomes law, the allotment of transportation funds in federal, state and local budgets may be uncertain and we believe that prolonged uncertainty may adversely impact our net sales and contract revenues and our overall financial performance in future periods.

In April 2009, we completed the acquisition of certain assets of Hamilton Signal, which included the Abacus system, for an aggregate purchase price of approximately \$518,000.

Critical Accounting Policies and Estimates

Management's Discussion and Analysis of Financial Condition and Results of Operations is based on our unaudited consolidated financial statements included herein, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and related disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. On an ongoing basis, we evaluate these estimates and assumptions, including those related to the collectibility of accounts receivable, the valuation of inventories, the recoverability of long-lived assets and goodwill, the realizability of deferred tax assets, accounting for stock-based compensation, the valuation of equity instruments, warranty reserves and other contingencies. We base these estimates on historical experience and on various other factors that we believe to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. These estimates and assumptions by their nature involve risks and uncertainties, and may prove to be inaccurate. In the event that any of our estimates or assumptions are inaccurate in any material respect, it could have a material adverse effect on our reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period.

Table of Contents

The accounting policies that affect our more significant judgments and estimates used in the preparation of our unaudited condensed consolidated financial statements are those relating to revenue recognition, accounts receivable, inventory, goodwill, warranty, income taxes, and stock-based compensation. These policies are described in further detail in our Annual Report on Form 10-K for fiscal 2010. There have been no significant changes in our critical accounting policies and estimates during the three months ended June 30, 2010 as compared to what was previously disclosed in our Annual Report on Form 10-K for fiscal 2010, except for our revenue recognition policy, which has been updated as follows:

Revenue Recognition. We record product revenues and related costs of sales upon transfer of title, which is generally upon shipment or, if required, upon acceptance by the customer, provided that we believe collectibility of the net sales amount is reasonably assured. Accordingly, at the date revenue is recognized, the significant uncertainties concerning the sale have been resolved.

We recognize revenue from the sale of deliverables that are part of a multiple-element arrangement in accordance with applicable accounting guidance that establishes a selling price hierarchy permitting the use of an estimated selling price to determine the allocation of arrangement consideration to a deliverable in a multiple-element arrangement where neither vendor specific objective evidence (VSOE) nor third-party evidence (TPE) is available for that deliverable. In the absence of VSOE or TPE of the standalone selling price for one or more delivered or undelivered elements in a multiple-element arrangement, we are required to estimate the selling prices of those elements. Overall arrangement consideration is allocated to each element (both delivered and undelivered items) based on their relative selling prices, regardless of whether those selling prices are evidenced by VSOE or TPE or are based on our estimated selling price.

We account for multiple-element arrangements that consist only of software and software-related services in accordance with industry-specific accounting guidance for software and software-related transactions. For such transactions, revenue on arrangements that include multiple elements is allocated to each element based on the relative fair value of each element, and fair value is generally determined by VSOE. If we cannot objectively determine the fair value of any undelivered element included in such multiple-element arrangements and the only undelivered element is post-contract customer support or maintenance, and VSOE of the fair value of such support or maintenance does not exist, revenue from the entire arrangement is recognized ratably over the support period. When the fair value of a delivered element has not been established, but VSOE of fair value exists for the undelivered elements, we use the residual method to recognize revenue if the fair value of all undelivered elements is determinable. Under the residual method, the fair value of the undelivered elements is deferred and the remaining portion of the arrangement fee is allocated to the delivered elements and is recognized as revenue.

Contract revenues are derived primarily from long-term contracts with governmental agencies. Contract revenues include costs incurred plus a portion of estimated fees or profits determined using the percentage of completion method of accounting based on the relationship of costs incurred to total estimated costs. Any anticipated losses on contracts are charged to earnings when identified. Changes in job performance and estimated profitability, including those arising from contract penalty provisions and final contract settlements, may result in revisions to recognized costs and revenues and are recognized in the period in which the revisions are determined. Profit incentives are included in revenue when their realization is reasonably assured. Under the percentage of completion method, recognition of profit is dependent upon the accuracy of a variety of estimates, including engineering progress, materials quantities, and achievement of milestones, incentives, penalty provisions, labor productivity, cost estimates and others. Such estimates are based on various professional judgments we make with respect to those factors and are subject to change as the project proceeds and new information becomes available.

In addition to product and contract revenues, we derive revenue from the provision of specific non-recurring contract engineering services to our strategic partner, Valeo, related to our LDW systems, and royalties earned on unit sales of our LDW systems by Valeo to the passenger car market. Non-recurring contract engineering revenues are recognized in the period in which the related services are performed. Royalty revenues are recorded based on unit sales of our products by Valeo and are recognized in the period in which such sales occur. Non-recurring contract engineering revenues and royalty revenues are included in our net sales.

Revenues from follow-on service and support, for which we generally charge separately, are recorded in the period in which the services are performed and are included in our net sales.

Recent Accounting Pronouncements

Refer to Note 1 of Notes to Unaudited Condensed Consolidated Financial Statements, included in Part I, Item I of this report for a discussion of recent accounting pronouncements.

[Table of Contents](#)

Results of Operations

The following table sets forth statement of income data as a percentage of total net sales and contract revenues for the periods indicated:

	Three Months Ended June 30,	
	2010	2009
Net sales and contract revenues:		
Net sales	60.4%	47.4%
Contract revenues	39.6	52.6
Total net sales and contract revenues	100.0%	100.0%
Costs of net sales and contract revenues:		
Cost of net sales	28.8	26.3
Cost of contract revenues	26.4	35.6
Gross profit	44.8	38.1
Operating expenses:		
Selling, general and administrative	29.6	29.1
Research and development	6.0	6.6
Amortization of intangible assets	0.2	0.3
Total operating expenses	35.8	36.0
Operating income	8.9	2.2
Non-operating income (expense):		
Other income, net	0.0	0.1
Interest expense, net	(0.3)	(0.6)
Income before income taxes	8.7	1.7
Provision for income taxes	(3.6)	(0.8)
Net income	5.1%	1.0%

Analysis of Quarterly Results of Operations

Net Sales and Contract Revenues. Net sales are comprised of product sales from our Roadway Sensors and Vehicle Sensors segments, as well as contract engineering revenue and royalty revenue generated from our Vehicle Sensors segment. Contract revenues consist entirely of Transportation Systems contract revenues, which are generated from systems integration and ITS consulting services primarily with federal, state, county and municipal agencies.

The following table presents details of our net sales and contract revenues for the three months ended June 30, 2010 and 2009:

	Three Months Ended June 30,		Increase (Decrease)		% Change
	2010	2009	(In thousands, except percentages)		
Roadway sensors	\$ 7,693	\$ 5,875	\$ 1,818		30.9%
Vehicle sensors	1,769	1,058	711		67.2

Edgar Filing: NEW YORK COMMUNITY BANCORP INC - Form 10-Q

Net sales	9,462	6,933	2,529	36.5
Contract revenues	6,212	7,701	(1,489)	(19.3)
Total net sales and contract revenues	\$ 15,674	\$ 14,634	\$ 1,040	7.1

We have historically had a diverse customer base. For the three months ended June 30, 2010, no individual customer represented greater than 10% of our total net sales and contract revenues. In the corresponding period in the prior fiscal year, one individual customer accounted for approximately 12.1% of our total net sales and contract revenues.

Table of Contents

Roadway Sensors

The increase in Roadway Sensors net sales for the three months ended June 30, 2010 as compared to the corresponding period in the prior year was driven by strong domestic sales volumes in both our direct and dealer markets. In the current period, we saw particular strength in certain of our newer product lines such as VersiCam and Abacus. In the prior year period, we experienced significantly lower sales primarily as a result of the downturn in the overall economy, which brought declines in commercial and residential construction, reductions and delays in spending on infrastructure projects and government budgetary pressures.

Vehicle Sensors

Vehicle Sensors net sales were primarily made up of sales of our LDW systems to the heavy truck market, which aggregated approximately \$1.6 million and \$810,000 for the three months ended June 30, 2010 and 2009, respectively. In the prior year quarter ended June 30, 2009, we experienced a significant slowdown in overall LDW unit shipments to each of our key markets, driven largely by the weakness in the U.S. and worldwide economy at that time. Comparatively, in the current quarter we saw stronger shipments, particularly to our foreign OEM customers in Europe and Japan, as well as our domestic truck fleet customers. We remain cautious in the outlook for the remainder of our current fiscal year. We anticipate that Vehicle Sensors unit sales in future periods could be adversely impacted by, among other factors, slower than expected adoption rates of our LDW system across each of our target markets and the continuing uncertainty in the global economic environment. Additionally, future unit sales of LDW systems and unit pricing could be adversely impacted as a result of increased competition in this market.

Also included in Vehicle Sensors net sales are revenues from contract engineering services and royalty revenues in the passenger car market that are derived from our strategic relationship with Valeo, which aggregated approximately \$141,000 and \$248,000 for the three months ended June 30, 2010 and 2009, respectively. The decline in the current fiscal year continues to reflect decreases in contract engineering services provided to Valeo as the pertinent engineering development activities have generally reached maturity for the related vehicle platforms that currently incorporate our LDW system. Our LDW systems are currently offered as an option on four Infiniti models. While Valeo is promoting our LDW systems to other passenger car OEMs, we cannot assure you that Valeo will be successful in these efforts.

Contract Revenues

Contract revenues are primarily dependent upon the continued availability of funding at both the state and federal levels from the various departments of transportation. For the three months ended June 30, 2010, our contract revenues decreased compared to the corresponding period in the prior year due primarily to delays or reductions in funding for certain of our projects. Likewise, in the prior year period, we experienced higher revenues from several large contracts which contained higher than usual amounts of sub-consulting content. In the future, we plan to continue to pursue large contracts that may contain significant sub-consulting content, which will likely contribute to variability in the timing and amount of our contract revenues from period to period.

Gross Profit. The following table presents details of our gross profit for the three months ended June 30, 2010 and 2009:

Edgar Filing: NEW YORK COMMUNITY BANCORP INC - Form 10-Q

	Three Months Ended June 30,			
	2010	2009	Increase	% Change
	(In thousands, except percentages)			
Total gross profit	\$ 7,017	\$ 5,582	\$ 1,435	25.7%
Total gross profit as a % of total net sales and contract revenues	44.8%	38.1%		
Gross profit as a % of net sales	52.2%	44.6%		
Gross profit as a % of contract revenues	33.4%	32.4%		

The increase in our total gross profit as a percent of total net sales and contract revenues for the three months ended June 30, 2010 as compared to the corresponding period in the prior year was primarily the result of our mix, whereby product net sales represents approximately 60% of our total net sales and contract revenues in the current period as compared to only 47% in the prior year period. Our product net sales generally carry higher margins than our contract revenues derived from our consulting services.

The increase in gross profit as a percent of net sales (gross margin) for the three months ended June 30, 2010 as compared to the corresponding period in the prior year was primarily a result of higher margins in Roadway Sensors during the current quarter, driven by our customer mix and lower costs for certain key materials. We generally enjoy higher gross margins on direct sales as compared to dealer and aftermarket sales. In Vehicle Sensors, we also saw significant improvement in our year over year gross

Table of Contents

margins as a result of higher sales levels in the current period which provided for improved overhead absorption. Additionally, in the prior year period, we recorded certain estimates for excess and obsolete inventory in our Vehicle Sensors segment, which adversely affected our gross margins in that period. Gross profit as a percentage of net sales can fluctuate in any specific quarter or year based on, among other factors, customer and product mix, competitive pricing requirements, product warranty costs and provisions for excess and obsolete inventories, as well as possible shifts of engineering resources from development activities to sustaining activities, which we record as cost of goods sold.

We recognize contract revenues and related gross profit using percentage of completion contract accounting, and the underlying mix of contract activity affects the related gross profit recognized in any given period. The slight increase in gross profit as a percent of contract revenues for the three months ended June 30, 2010 compared to the corresponding period in the prior year was primarily due to a contract mix weighted more toward higher margin contracts in the current quarter. As discussed above, a higher portion of our contract revenues in the three months ended June 30, 2009 were made up of sub-consultant content, which generally carry lower margins. We expect the variability and related timing of sub-consulting content in our Transportation Systems contracts in future periods to continue to cause fluctuations in this segment's gross margins from period to period.

Selling, General and Administrative Expense. The following table presents selling, general and administrative expense for the three months ended June 30, 2010 and 2009:

	Three Months Ended June 30, 2010			Three Months Ended June 30, 2009			
	Amount	% of Net Sales and Contract Revenues		Amount	% of Net Sales and Contract Revenues	Increase (Decrease)	% Change
	(In thousands, except percentages)						
Salary and personnel-related	\$ 3,239	20.7%	\$	2,887	19.7%	\$ 352	12.2%
Facilities, insurance and supplies	643	4.1		595	4.1	48	8.1
Professional and outside services	418	2.7		295	2.0	123	41.7
Travel and conferences	410	2.6		345	2.4	65	18.8
Other	(69)	-0.4		131	0.9	(200)	(152.7)
Selling, general and administrative	\$ 4,641	29.6%	\$	4,253	29.1%	\$ 388	9.1

The increase in selling, general and administrative expense for the three months ended June 30, 2010 compared to the corresponding period in the prior year was primarily due to higher selling and commission-related expenses for our Roadway Sensors and Vehicle Sensors segments, as total net sales for both segments collectively increased approximately 36% from the prior year quarter. We also saw a shift from cost of sales to sales and marketing of certain of our headcount expenses in our Transportation Systems segment in the current period commensurate with the overall decline in this segment's revenues as discussed above and the reallocation of existing personnel. As compared to the prior year quarter, we also incurred additional consulting and outside services expenses in our Vehicle Sensors segment related to market research and certain other sales and marketing activities. Additionally, in the current quarter, we realized approximately \$200,000 in net reversals of previously recorded bad debt expense (included in the "Other" category in the table above) as a result of collecting certain large accounts receivable balances. In prior periods, we had recorded an estimated allowance for doubtful accounts against these receivables given the uncertainty of collection at that time. In the future, our operating results in any given period may be favorably or adversely impacted as a result of our estimates of the realization of our accounts receivable.

Table of Contents

Research and Development Expense. The following table presents research and development expense for the three months ended June 30, 2010 and 2009:

	Three Months Ended June 30, 2010		Three Months Ended June 30, 2009			
	Amount	% of Net Sales and Contract Revenues	Amount	% of Net Sales and Contract Revenues	Increase (Decrease)	% Change
	(In thousands, except percentages)					
Salary and personnel-related	\$ 620	4.0%	\$ 683	4.7%	\$ (63)	(9.2)%
Facilities, development and supplies	274	1.7	236	1.6	38	16.1
Other	47	0.3	45	0.3	2	4.4
Research and development	\$ 941	6.0%	\$ 964	6.6%	\$ (23)	(2.4)

Our total research and development expenses in the three months ended June 30, 2010 were largely consistent with the corresponding period in the prior year. We currently expect our total research and development expenditures for the current fiscal year will be flat to slightly higher when compared to the prior fiscal year.

Interest Expense, Net. Net interest expense of \$40,000 for the three months ended June 30, 2010 was lower than the \$86,000 for the three months ended June 30, 2009 primarily due to the overall lower level of borrowings in the current fiscal year, as we continue to make monthly principal payments on our term note. As a result, we anticipate our interest expense will continue to decline for the remainder of the fiscal year ending March 31, 2011. See Liquidity and Capital Resources below for additional details on our borrowings.

Income Taxes. The following table presents our provision for income taxes for the three months ended June 30, 2010 and 2009:

	Three Months Ended June 30,				% Change
	2010	2009	Increase		
	(In thousands, except percentages)				
Provision for income taxes	\$ 563	\$ 110	\$ 453		412%
Effective tax rate	41.4%	43.3%			

On an interim basis, we estimate what our anticipated annual effective tax rate will be, while also separately considering applicable discrete and other non-recurring items, and record a quarterly income tax provision in accordance with the anticipated annual rate. As the fiscal year progresses, we refine our estimates based on actual events and financial results during the year. This process can result in significant changes to our expected effective tax rate. When this occurs, we adjust our income tax provision during the quarter in which our estimates are refined so that the year-to-date provision reflects the expected annual effective tax rate. These changes, along with adjustments to our deferred taxes, among others, may create fluctuations in our overall effective tax rate from quarter to quarter.

Liquidity and Capital Resources

Cash Flows

We have historically financed our operations with a combination of cash flows from operations, borrowings under credit facilities and the sale of equity securities. We currently rely on cash flows from operations and the availability of borrowings on a line of credit facility to fund our operations, which we believe to be sufficient to fund our operations for at least the next twelve months. However, we may need or choose to raise additional capital to fund potential future acquisitions and our future growth. We may raise such funds by selling equity or debt securities to the public or to selected investors, or by borrowing money from financial institutions. If we raise additional funds by issuing equity or convertible debt securities, the ownership percentage of existing stockholders would likely be reduced.

At June 30, 2010, we had \$23.0 million in working capital, which included no borrowings on our \$12.0 million line of credit and \$11.7 million in cash and cash equivalents. This compares to working capital of \$22.6 million at March 31, 2010, which included no borrowings on our line of credit and \$10.4 million in cash and cash equivalents.

Table of Contents

The following table summarizes our cash flows for the three months ended June 30, 2010 and 2009:

	Three Months Ended June 30,	
	2010	2009
	(In thousands)	
Net cash provided by (used in):		
Operating activities	\$ 1,916	\$ 21
Investing activities	(207)	(342)
Financing activities	(438)	(67)

Operating Activities. Cash provided by our operations for the three months ended June 30, 2010 was primarily the result of (i) our net income of \$797,000 during the current period; (ii) \$838,000 in non-cash items within the statement of income, primarily adjustments to our deferred tax assets of \$467,000 and depreciation expense of \$244,000; and (iii) \$281,000 in cash resulting from changes in our operating assets and liabilities during the period. Cash provided by operating activities during the three months ended June 30, 2009 was primarily the result of our net income during that period of \$144,000, along with \$389,000 in non-cash items within the statement of income, primarily depreciation and stock-based compensation expense. These cash inflows were substantially offset by \$512,000 in net cash used by changes in operating assets and liabilities during the period.

Investing Activities. Cash used in our investing activities for the three months ended June 30, 2010 consisted of (i) \$101,000 for purchases of property and equipment and (ii) \$106,000 representing the first anniversary payment for the acquisition of certain assets of Hamilton Signal. Cash used in investing activities for the three months ended June 30, 2009 consisted of purchases of property and equipment of \$42,000 as well as \$300,000 used for the acquisition of Hamilton Signal. In April 2011, we expect to make the final payment of \$112,000 related to the Hamilton Signal acquisition.

Financing Activities. Net cash used in financing activities during the three months ended June 30, 2010 was the result of payments on our long-term debt of \$457,000. These payments were partially offset during the period by \$19,000 in proceeds received from the exercise of outstanding stock options to purchase shares of our common stock. During the three months ended June 30, 2009, cash used in financing activities was the result of net payments on our long-term debt of \$139,000, partially offset by \$72,000 in proceeds from the exercise of outstanding stock options to purchase shares of our common stock.

Borrowings

In October 2008, we entered into a \$19.5 million credit facility with California Bank & Trust, which provides for a two-year revolving line of credit with borrowings of up to \$12.0 million and a \$7.5 million 48-month term note (discussed below). Interest on borrowed amounts under the revolving line of credit are payable monthly at a rate equal to the current stated prime rate (3.25% at June 30, 2010) up to the current stated prime rate plus 0.50%, depending on aggregate deposit balances maintained at the bank in relation to the total loan commitment under the credit facility. We are obligated to pay an unused line fee of 0.25% per annum applied to the average unused portion of the revolving line of credit during the preceding month. The revolving line of credit does not contain any early termination fees and is secured by substantially all of our assets. As of June 30, 2010, no amounts were outstanding under the revolving line of credit portion of the facility. Availability under this line of credit may be reduced or otherwise limited as a result of our obligations to comply with certain financial covenants, as described further below.

Edgar Filing: NEW YORK COMMUNITY BANCORP INC - Form 10-Q

As of June 30, 2010, we had outstanding borrowings of approximately \$4.8 million under the term note included in our credit facility. Principal payments under this term note are required to be repaid in 48 monthly installments of \$152,000 commencing on June 1, 2009. Additionally, beginning on November 1, 2009, and on November 1 of each year thereafter, we are required to repay additional principal of up to \$500,000, calculated based on certain financial measures, as further defined in the loan agreement. These additional principal payments effectively reduce the total number of monthly installments necessary to repay the term note. Interest on the term note is payable monthly at a rate equal to the current stated prime rate plus 0.50% up to the current stated prime rate plus 1.00%, depending on aggregate deposit balances maintained at the bank in relation to the total loan commitment under the credit facility. The term note contains no early termination fees and, along with our revolving line of credit discussed above, is secured by substantially all of our assets.

In connection with our credit facility and loan agreement with California Bank & Trust, we are also required to comply with certain quarterly financial covenants. These include achieving ratios for working capital and debt service, as well as maintaining a level of profitability, all of which are further defined in the agreement. While we believe we are currently in compliance with all such financial covenants and expect to maintain compliance for the foreseeable future, we cannot assure you that we will not violate one or more covenants in the future. If we were to be in violation of covenants under this agreement, our lender could choose to accelerate payment on all outstanding loan balances and pursue its security interest in our assets. In this event, we cannot assure you that we would be able to quickly obtain equivalent or suitable replacement financing on acceptable terms, or at all. If we were not able to secure alternative sources of financing, such acceleration would have a material adverse impact on our business and financial condition.

Table of Contents

Off Balance Sheet Arrangements

Other than our operating leases, we do not believe we have any other material off balance sheet arrangements at June 30, 2010.

Seasonality

We have historically experienced, and expect to continue to experience seasonality, particularly with respect to our Roadway Sensors net sales in the third and fourth fiscal quarters due to a reduction in road construction or repairs during the winter months in many markets as a result of inclement weather conditions.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Interest Rate Risk

Our exposure to interest rate risk is limited to our line of credit and our bank term note. Our line of credit bears interest equal to the prevailing prime rate plus 0% to 1.0%. We do not believe that a 10% increase in the interest rate on our line of credit or term note would have a material impact on our financial position, operating results or cash flows. In addition, we believe that the carrying value of our outstanding debt under our credit facility approximates fair value.

Foreign Currency Risk

To date, a small portion of our net sales have been denominated in Euros. Gains or losses from foreign currency remeasurement are included in other income in our consolidated financial statements and to date have not been significant. We do not believe we are currently exposed to any material risk of loss from currency exchange fluctuations. We do not currently purchase derivative financial instruments to hedge foreign currency exchange risk, but may do so in the future.

ITEM 4T. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Edgar Filing: NEW YORK COMMUNITY BANCORP INC - Form 10-Q

As of the end of the period covered by this report, we carried out an evaluation, under the supervision and with the participation of our management, including our Chief Executive Officer and our Chief Financial Officer, of the effectiveness of the design and operation of our disclosure controls and procedures, as such term is defined in Exchange Act Rules 13a-15(e) and 15d-15(e). Based upon that evaluation, the Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures are effective to ensure that information required to be disclosed by us in the reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and forms and are effective in ensuring that information required to be disclosed by us in the reports that we file or submit under the Exchange Act is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure. In designing and evaluating the disclosure controls and procedures, our management recognized that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving the desired control objectives. Our management necessarily applied its judgment in evaluating the cost-benefit relationship of such controls and procedures.

Changes in Internal Controls

During the fiscal quarter covered by this report, there has been no change in our internal controls over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934, as amended) that has materially affected, or is reasonably likely to materially affect, our internal controls over financial reporting.

Table of Contents

Inherent Limitations on Internal Control

A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of management override or improper acts, if any, have been detected. These inherent limitations include the realities that judgments in decision making can be faulty, and that breakdowns can occur because of simple errors. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the control. The design of any system of controls is also based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Because of the inherent limitations in a cost-effective control system, misstatements due to management override, error or improper acts may occur and not be detected. Any resulting misstatement or loss may have an adverse and material effect on our business, financial condition and results of operations.

PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

The information set forth under the heading "Litigation and Other Contingencies" in Note 6 of Notes to Unaudited Condensed Consolidated Financial Statements, included in Part I, Item I of this report, is incorporated herein by reference.

ITEM 1A. RISK FACTORS

Our business is subject to a number of risks, some of which are discussed below. Other risks are presented elsewhere in this report and in the information incorporated by reference into this report. You should consider the following risks carefully in addition to the other information contained in this report and our other filings with the SEC, including our annual report on Form 10-K and subsequent reports on Forms 10-Q and 8-K, before deciding to buy, sell, or hold our common stock. The risks and uncertainties described below are not the only ones facing our company. Additional risks and uncertainties not presently known to us or that we currently deem immaterial may also affect our business operations. If any of these risks actually occurs, our business, financial condition, or results of operations could be seriously harmed. In that event, the market price for our common stock could decline and you may lose all or part of your investment.

The economic slowdown has reduced and delayed government funding for transportation infrastructure projects and initiatives, decreased availability of financial capital for our customers and has adversely impacted real estate development, all of which is adversely impacting our net sales and could impact our contract revenues. Decreased consumer spending, the failure of certain financial institutions and businesses, concerns about the availability and cost of credit, and reduced corporate profits and capital spending have resulted in a downturn in worldwide economic conditions, as well as budgetary shortfalls increasingly present at all levels of government. These unfavorable economic conditions are having a negative impact on customer orders and government funding of infrastructure projects incorporating our products and services. Such factors have and may continue to result in cancellations and rescheduling of backlog and customer orders. In addition, the recent decline in the U.S. real estate market, particularly in new home and commercial construction, has adversely impacted new road construction and in the prior fiscal year resulted in flat or declining Roadway Sensor and Vehicle Sensor net sales and also

adversely impacted Transportation Systems contract revenues. Any of the foregoing economic conditions may adversely affect our net sales and contract revenues in future periods and make it extremely difficult for our customers, our suppliers and us to accurately forecast and plan future business activities. Additionally, there continues to be uncertainties regarding the impact of the federal stimulus package and the fact that the accessibility of funds is taking longer than originally anticipated, as well as a delay in the passage of a new Federal Highway Bill. If such conditions continue or worsen, our business, financial condition and results of operations could be materially and adversely affected.

Because we depend on government contracts and subcontracts, we face additional risks related to contracting with federal, state and local governments, including budgetary issues and fixed price contracts. A significant portion of our sales are derived from contracts with governmental agencies, either as a general contractor, subcontractor or supplier. Government contracts represented approximately 45%, 45% and 38% of our total net sales and contract revenues for the fiscal years ended March 31, 2010, 2009 and 2008, respectively. We anticipate that revenue from government contracts will continue to remain a significant portion of our net sales and contract revenues. Government business is, in general, subject to special risks and challenges, including:

- delays in funding, including delays in the allocation of funds to state and local agencies from the U.S. federal government as a result of the expiration of the 2005 Federal Highway Bill on October 31, 2009, as well as delays or reductions in stimulus funds and other state and local funding dedicated for transportation projects;
- long purchase cycles or approval processes;
- competitive bidding and qualification requirements;

Table of Contents

- the impact of international conflicts;
- performance bond requirements;
- changes in government policies and political agendas;
- other government budgetary constraints, cut-backs, delays or reallocation of government funding;
- milestone requirements and liquidated damage provisions for failure to meet contract milestones; and
- international conflicts or other military operations that could cause the temporary or permanent diversion of government funding from transportation or other infrastructure projects.

Governmental budgets and plans are subject to change without warning. Certain risks of selling to governmental entities include dependence on appropriations and administrative allocation of funds, changes in governmental procurement legislation and regulations and other policies that may reflect political developments or agendas, significant changes in contract scheduling, intense competition for government business and termination of purchase decisions for the convenience of the governmental entity. Substantial delays in purchase decisions by governmental entities, and the current constraints on government budgets at the federal, state and local level, could cause our net sales and contract revenues and income to drop substantially or to fluctuate significantly between fiscal periods.

In addition, a large number of our government contracts are fixed price contracts. As a result, we may not be able to recover any cost overruns we may incur. These fixed price contracts require us to estimate the total project cost based on preliminary projections of the project's requirements. The financial viability of any given project depends in large part on our ability to estimate these costs accurately and complete the project on a timely basis. In the event our costs on these projects exceed the fixed contractual amount, we will be required to bear the excess costs. Such additional costs would adversely affect our financial condition and results of operations. Moreover, certain of our government contracts are subject to termination or renegotiation at the convenience of the government, which could result in a large decline in our net sales and contract revenues in any given period. Our inability to address any of the foregoing concerns or the loss or renegotiation of any material government contract could seriously harm our business, financial condition and results of operations.

California state budgetary constraints may have a material adverse impact on us. The state of California has experienced, and is continuing to experience, a significant budget shortfall and other related budgetary issues and constraints. The state of California has historically been and is considered to be a key geographic region for our Roadway Sensors and Transportation Systems segments. Ongoing uncertainty as to the timing and accessibility of federal stimulus monies to the state, changes in state funding allocations to local agencies and municipalities, or other delays in purchasing for, or commencement of, transportation projects has and may continue to have a negative impact on our net sales and contract revenues and our income.

The markets in which we operate are highly competitive and have many more established competitors, which could adversely affect our sales or the market acceptance of our products. We compete with numerous other companies in our target markets including, but not limited to, large, multinational corporations, which include tier-one automotive suppliers, and many smaller regional engineering firms.

In Vehicle Sensors, we believe that as a result of the expected 2013 European mandate for LDW and other active safety systems, and an overall awareness of the potential benefits of LDW, we will experience an even higher degree of competition from a variety of tier-one OEM suppliers and other potential market entrants worldwide. We also expect such competition to increase due to technological advancements, industry consolidations and reduced barriers to entry. Increased competition is likely to result in loss of market share, price reductions and reduced gross margins, any of which could seriously harm our business, financial condition and results of operations. For example, a developer of LDW systems was acquired by a large multinational organization during our fiscal year ended March 31, 2009. This new competitor has recently increased its market share and could become more aggressive in pursuing market share in both the passenger car and heavy truck markets as a result of its greater access to resources and reputation in the market. Furthermore, awareness of LDW technology is increasing and other market players have developed competing technologies, which may contain improvements or added features beyond those offered by our LDW systems. Additionally, from time to time, we may be required to re-compete for LDW business from our main customer base of heavy truck OEMs. These OEMs could make a supplier change based on price, product performance or available features. Should our competition be successful, this could adversely affect our ability to successfully market and sell our LDW systems to new and existing customers.

We compete with existing, well-established companies in our Roadway Sensors segment, both domestically and abroad. Certain technological barriers to entry make it difficult for new competitors to enter the market with competing video or other technologies; however, we are aware of new market entrants from time to time. Increased competition could result in loss of market share, price reductions and reduced gross margins, any of which could seriously harm our business, financial condition and results of operations.

Table of Contents

The Transportation Systems market is highly fragmented and is subject to evolving national and regional quality and safety standards. Our competitors vary in size, number, scope and breadth of the products and services they offer, and include large multi-national engineering firms and smaller local regional firms.

In all of our segments, many of our competitors have far greater name recognition and greater financial, technological, marketing, and customer service resources than we do. This may allow them to respond more quickly to new or emerging technologies and changes in customer requirements. It may also allow them to devote greater resources to the development, promotion, sale and support of their products than we can. Recent consolidations of end users, distributors and manufacturers in our target markets have exacerbated this problem. As a result of the foregoing factors, we may not be able to compete effectively in our target markets and competitive pressures could adversely affect our business, financial condition and results of operations.

We may engage in acquisitions of companies or technologies that may require us to undertake significant capital infusions and could result in disruptions of our business and diversion of resources and management attention. We completed the acquisition of certain assets of Hamilton Signal in April 2009. We have in the past acquired, and may in the future acquire, additional complementary businesses, products, and technologies. Acquisitions may require significant capital infusions and, in general, acquisitions also involve a number of special risks, including:

- potential disruption of our ongoing business and the diversion of our resources and management's attention;
- the failure to retain or integrate key acquired personnel;
- the challenge of assimilating diverse business cultures, and the difficulties in integrating the operations, technologies and information system of the acquired companies;
- increased costs to improve managerial, operational, financial and administrative systems and to eliminate duplicative services;
- the incurrence of unforeseen obligations or liabilities;
- potential impairment of relationships with employees or customers as a result of changes in management; and
- increased interest expense and amortization of acquired intangible assets.

Our competitors are also soliciting potential acquisition candidates, which could both increase the price of any acquisition targets and decrease the number of attractive companies available for acquisition. Acquisitions may also materially and adversely affect our operating results due to large write-offs, contingent liabilities, substantial depreciation, deferred compensation charges or intangible asset amortization, or other adverse tax or accounting consequences. We cannot assure you that we will be able to identify or consummate any additional acquisitions, successfully integrate any acquisitions or realize the benefits anticipated from any acquisition.

We may be unable to attract and retain key personnel, which could seriously harm our business. Due to the specialized nature of our business, we are highly dependent on the continued service of our executive officers and other key management, engineering and technical personnel. The loss of any of our officers, or any of our other executives or key members of management could adversely affect our business, financial condition, or results of operations. Our success will also depend in large part upon our ability to continue to attract, retain and motivate qualified engineering and other highly skilled technical personnel. In particular, the future success of our Transportation Systems segment will depend on our ability to hire additional qualified engineers and planners. Competition for qualified employees, particularly development engineers, is intense. We may not be able to continue to attract and retain sufficient numbers of such highly skilled employees. Our inability to attract and retain additional key employees or the loss of one or more of our current key employees could adversely affect our business, financial condition and results of operations.

Table of Contents

Our profitability could be adversely affected if we are not able to maintain adequate utilization of our Transportation Systems workforce. The cost of providing our Transportation Systems engineering and consulting services, including the extent to which we utilize our workforce, affects our profitability. The rate at which we utilize our workforce is affected by a number of factors, including:

- our ability to transition employees from completed projects to new assignments and to hire and assimilate new employees;
- our ability to forecast demand for our services and thereby maintain an appropriate headcount in our various regions;
- our need to devote time and resources to training, business development, professional development and other non-chargeable activities; and
- our ability to match the skill sets of our employees to the needs of the marketplace.

Our use of the percentage of completion method of accounting for our contract revenues could result in a reduction or reversal of previously recorded revenues and profits. A significant portion of our total net sales and contract revenues are measured and recognized using the percentage of completion method of accounting. Our use of this accounting method results in recognition of revenues and profits ratably over the life of a contract, based generally on the proportion of costs incurred to date to total costs expected to be incurred for the entire project. The effects of revisions to revenues and estimated costs are recorded when the amounts are known or can be reasonably estimated. Such revisions could occur in any period and their effects could be material. Although we have historically made reasonably reliable estimates of the progress towards completion of long-term engineering, program management, construction management or construction contracts, the uncertainties inherent in the estimating process make it possible for actual costs to vary materially from estimates, including reductions or reversals of previously recorded revenues and profits.

Our failure to successfully bid on new contracts and renew existing contracts could reduce our revenues and profits. Our business depends on our ability to successfully bid on new contracts and renew existing contracts with private and public sector customers. Contract proposals and negotiations are complex and frequently involve a lengthy bidding and selection process, which are affected by a number of factors, such as market conditions, financing arrangements and required governmental approvals. For example, a customer may require us to provide a surety bond or letter of credit to protect the client should we fail to perform under the terms of the contract. If negative market conditions arise, or if we fail to secure adequate financial arrangements or the required governmental approval, we may not be able to pursue particular projects, which could adversely reduce or eliminate our profitability.

We may experience production gaps that could materially and adversely impact our sales and financial results and the ultimate acceptance of our products. It is possible that we could experience unforeseen quality control issues or part shortages as we adjust production to meet current demand for our products. We have historically used single suppliers for certain significant components in our products. Should any such delay or disruption occur, or should a key supplier discontinue operations because of the current economic climate, our future sales will likely be materially and adversely affected. Additionally, we rely heavily on select contract manufacturers to produce many of our products and do not have any long-term contracts to guarantee supply of such products. Although we believe our contract manufacturers have sufficient

capacity to meet our production schedules for the foreseeable future and we believe we could find alternative contract manufacturing sources for many of our products, if necessary, we could experience a production gap if for any reason our contract manufacturers were unable to meet our production requirements and our cost of goods sold could increase, adversely affecting our margins.

If we are unable to develop and introduce new products and product enhancements successfully and in a cost-effective and timely manner, or are unable to achieve market acceptance of our new products, our operating results would be adversely affected. We believe our revenue growth and future operating results will depend on our ability to complete development of new products and enhancements, introduce these products in a timely, cost-effective manner, achieve broad market acceptance of these products and enhancements, and reduce our production costs. We cannot guarantee the success of these products, and we may not be able to introduce any new products or any enhancements to our existing products on a timely basis, or at all. In addition, the introduction of any new products could adversely affect the sales of certain of our existing products.

We believe that we must continue to make substantial investments to support ongoing research and development in order to remain competitive. We need to continue to develop and introduce new products that incorporate the latest technological advancements in outdoor image processing hardware, software and camera technologies in response to evolving customer requirements. We cannot assure you that we will be able to adequately manage product transition issues. Our business and results of operations could be adversely affected if we do not anticipate or respond adequately to technological developments or changing customer requirements or if we cannot adequately manage inventory issues typically related to new product transitions and introductions. We cannot assure you that any such investments in research and development will lead to any corresponding increase in revenue.

Table of Contents

Market acceptance of our new products depends upon many factors, including our ability to accurately predict market requirements and evolving industry standards, our ability to resolve technical challenges in a timely and cost-effective manner, our ability to qualify any new products with OEMs and achieve manufacturing efficiencies, the perceived advantages of our new products over traditional products and the marketing capabilities of our independent distributors and strategic partners, including Valeo's ability to expand sales of LDW systems in the passenger car market. The success of our LDW system will also depend in part on the success of the automotive vehicles that incorporate our technology, as well as the success of optional equipment that OEMs bundle with our technologies.

Certain of the components used in our products may need to be re-engineered in the next 12 to 36 months as the industry is moving towards a standard of using lead-free components. We cannot assure you as to our ability to successfully redesign our products to incorporate compliant components and gain market acceptance of such redesigned products. In addition, we may experience a shortage of products as a result of potential scarcity of lead-free components.

Our business and results of operations could also be seriously harmed by any significant delays in our new product development. Certain of our new products could contain undetected design faults and software errors or bugs when first released by us, despite our testing. We may not discover these faults or errors until after a product has been installed and used by our customers. Any faults or errors in our existing products or in any new products may cause delays in product introduction and shipments, require design modifications or harm customer relationships, any of which could adversely affect our business and competitive position.

New environmental regulations may result in a decline in our Vehicle Sensors net sales. From time to time, environmental regulations are enacted, which can significantly increase the cost of manufacturing new vehicles as well as the cost of maintaining existing vehicles and truck fleets. As a result, we could experience a decline in sales of our Vehicle Sensors products as truck and vehicle manufacturers and fleet operators attempt to control their costs.

We depend upon Valeo to market our LDW technologies for the OEM passenger car market. We have granted Valeo the exclusive right to sell and manufacture our LDW system to the worldwide passenger car market in exchange for royalty payments for each LDW unit sold. As such, the future success and broad market acceptance of our technologies in the passenger car market will depend upon Valeo's ability to manufacture, market and sell our technologies, and to convince more OEM passenger car manufacturers to adopt our technologies. To date, we have not generated significant royalties from Valeo's efforts and have only been designed into one passenger car OEM product line. If Valeo does not devote considerable resources and aggressively pursue opportunities, our expansion into the passenger car market, and our related revenues from contract engineering services and royalty revenues, could be adversely affected or not materialize as originally anticipated.

If we do not keep pace with rapid technological changes and evolving industry standards, we will not be able to remain competitive and there will be no demand for our products. Our markets are in general characterized by the following factors:

- rapid technological advances;
- downward price pressures in the marketplace as technologies mature;

- changes in customer requirements;
- additional qualification requirements related to new products or components;
- frequent new product introductions and enhancements;
- inventory issues related to transition to new or enhanced models; and
- evolving industry standards and changes in the regulatory environment.

Our future success will depend upon our ability to anticipate and adapt to changes in technology and industry standards, and to effectively develop, introduce, market and gain broad acceptance of new products and product enhancements incorporating the latest technological advancements. In particular, our LDW systems are incorporated into automobiles and trucks that face significant technological changes in each model year and among different vehicle models. Accordingly, we must adapt our technology from time to time to function with such changes.

Table of Contents

Our international business operations may be threatened by many factors that are outside of our control. While we historically have had limited international sales and operations experience, we began work on our first overseas contracts in Abu Dhabi and Dubai in fiscal 2010. We plan to expand our international efforts in the future with respect to all three of our segments, but cannot assure you that we will be successful in those efforts. International operations subject us to various inherent risks including, among others:

- currency fluctuations and restrictions;
- political, social and economic instability, as well as international conflicts and acts of terrorism;
- longer accounts receivable payment cycles;
- import and export license requirements and restrictions of the United States and each other country in which we operate;
- unexpected changes in regulatory requirements, tariffs and other trade barriers or restrictions;
- the burdens of compliance with a wide variety of foreign laws and more restrictive labor laws and obligations;
- difficulties in managing and staffing international operations;
- potentially adverse tax consequences; and
- reduced protection for intellectual property rights in some countries.

Substantially all of our international sales are denominated in U.S. dollars. As a result, an increase in the relative value of the dollar could make our products more expensive and potentially less price competitive in international markets. We do not currently engage in any transactions as a hedge against risks of loss due to foreign currency fluctuations.

Any of the factors mentioned above may adversely affect our future international sales and, consequently, affect our business, financial condition and operating results. Additionally, as we pursue the expansion of our international business, certain fixed and other overhead costs could outpace our revenues, thus adversely affecting our results of operations. We may likewise face local competitors in certain international markets who are more established, have greater economies of scale and stronger customer relationships. Furthermore, as we increase our international sales, our total revenues may also be affected to a greater extent by seasonal fluctuations resulting from lower sales that typically occur during the summer months in Europe and other parts of the world.

If our internal controls over financial reporting do not comply with the requirements of the Sarbanes-Oxley Act, our business and stock price could be adversely affected. Section 404 of the Sarbanes-Oxley Act of 2002 currently requires us to evaluate the effectiveness of our internal controls over financial reporting at the end of each fiscal year and to include a management report assessing the effectiveness of our internal controls over financial reporting in all annual reports.

In July 2010, Congress passed the Dodd-Frank Wall Street Reform and Consumer Protection Act, which was subsequently signed into law. Included in the act is a provision that permanently exempts small public companies that qualify as either a Non-Accelerated Filer or Smaller Reporting Company from the auditor attestation requirement of Section 404(b) of the Sarbanes-Oxley Act of 2002. For our fiscal year ending March 31, 2011, we currently expect to be exempt from such requirement; however, to the extent we do not qualify as a Non-Accelerated Filer or Smaller Reporting Company in subsequent fiscal years, we will be subject to such auditor attestation requirement. In such an event, we may not be able to complete the work required for such attestation on a timely basis, and even if we timely complete such requirements, our independent registered public accounting firm may still conclude that our internal controls over financial reporting are not effective.

Our management, including our CEO and CFO, does not expect that our internal controls over financial reporting will prevent all errors and all fraud. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the control system's objectives will be met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within Iteris have been or will be detected. These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple errors or mistakes. Controls can also be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls is based in part on certain assumptions about the likelihood of future events, and we cannot assure you that any design will succeed in achieving its stated goals under all potential future conditions. Over time, our controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with policies or procedures. Because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

Table of Contents

Our quarterly operating results fluctuate as a result of many factors. Therefore, we may fail to meet or exceed the expectations of securities analysts and investors, which could cause our stock price to decline. Our quarterly revenues and operating results have fluctuated and are likely to continue to vary from quarter to quarter due to a number of factors, many of which are not within our control. Factors that could affect our revenues include, among others, the following:

- delays in government contracts and funding from time to time and budgetary constraints at the federal, state and local levels;
- our ability to access stimulus funding, funding from a new Federal Highway Bill or other funding;
- declines in new home and commercial real estate construction and related road and other infrastructure construction;
- changes in our pricing policies and the pricing policies of our suppliers and competitors, pricing concessions on volume sales, as well as increased price competition in general;
- the long lead times associated with government contracts or required by vehicle manufacturers;
- the size, timing, rescheduling or cancellation of significant customer orders;
- our ability to control costs;
- our ability to raise additional capital;
- the mix of our products and services sold in a quarter, which mix has varied and is expected to continue to vary from time to time;
- seasonality due to winter weather conditions;

Edgar Filing: NEW YORK COMMUNITY BANCORP INC - Form 10-Q

- our ability to develop, introduce, patent, market and gain market acceptance of new products, applications and product enhancements in a timely manner, or at all;
- market acceptance of the products incorporating our technologies and products;
- the introduction of new products by competitors;
- the availability and cost of components used in the manufacture of our products;
- our success in expanding and implementing our sales and marketing programs;
- the effects of technological changes in our target markets;
- the amount of our backlog at any given time;
- the nature of our government contracts;
- deferrals of customer orders in anticipation of new products, applications or product enhancements;
- risks and uncertainties associated with our international business;
- currency fluctuations and our ability to get currency out of certain foreign countries; and
- general economic and political conditions; and
- international conflicts and acts of terrorism.

Table of Contents

Due to all of the factors listed above as well as other unforeseen factors, our future operating results could be below the expectations of securities analysts or investors. If that happens, the trading price of our common stock could decline. As a result of these quarterly variations, you should not rely on quarter-to-quarter comparisons of our operating results as an indication of our future performance.

As compared to recent prior fiscal years, we experienced a decline in our net sales and contract revenues in our most recently completed fiscal year ended March 31, 2010. If we fail to manage this decline effectively, we may be unable to execute our business plan and may experience future weaknesses in our operating results. We have expanded our overall business in the past few years; however, we experienced a reduction in our net sales and contract revenues in the fiscal year ended March 31, 2010. Based on our business objectives, and in order to achieve future growth, we will need to continue to add additional qualified personnel, and invest in additional research and development and sales and marketing activities, which could lead to increases in our expenses and further declines in our operating results. In addition, our past expansion has placed, and future expansion is expected to place, a significant strain on our managerial, administrative, operational, financial and other resources. If we are unable to manage these activities or any unexpected revenue declines successfully, our growth, our business, our financial condition and our results of operations could continue to be adversely affected.

We may not be able to adequately protect or enforce our intellectual property rights, which could harm our competitive position. If we are not able to adequately protect or enforce the proprietary aspects of our technology, competitors could be able to access our proprietary technology and our business, financial condition and results of operations will likely be seriously harmed. We currently attempt to protect our technology through a combination of patent, copyright, trademark and trade secret laws, employee and third party nondisclosure agreements and similar means. Despite our efforts, other parties may attempt to disclose, obtain or use our technologies or systems. Our competitors may also be able to independently develop products that are substantially equivalent or superior to our products or design around our patents. In addition, the laws of some foreign countries do not protect our proprietary rights as fully as do the laws of the United States. As a result, we may not be able to protect our proprietary rights adequately in the United States or abroad.

Litigation may be necessary in the future to enforce our intellectual property rights or to determine the validity and scope of the proprietary rights of others. Litigation may also be necessary to defend against claims of infringement or invalidity by others. An adverse outcome in litigation or any similar proceedings could subject us to significant liabilities to third parties, require us to license disputed rights from others or require us to cease marketing or using certain products or technologies. We may not be able to obtain any licenses on terms acceptable to us, or at all. We also may have to indemnify certain customers or strategic partners if it is determined that we have infringed upon or misappropriated another party's intellectual property. Any of these results could adversely affect our business, financial condition and results of operations. In addition, the cost of addressing any intellectual property litigation claim, including legal fees and expenses, and the diversion of management's attention and resources, regardless of whether the claim is valid, could be significant and could seriously harm our business, financial condition and results of operations.

We may need to raise additional capital in the future, which may not be available on terms acceptable to us, or at all. We have historically experienced volatility in our earnings and cash flows from operations from year to year. Although we entered into a \$19.5 million credit facility, effective October 2008, should we have an event of default, which includes, among other things, a failure to meet certain financial covenants and a material adverse change in the business, the bank could choose to limit or take away our ability to borrow these or any funds. Should this occur, or if the credit markets further tighten or our business declines, we may need or choose to raise additional capital to repay indebtedness, or pursue acquisitions or to expand our operations. Such additional capital may be raised through bank borrowings, or other debt or equity financings. We cannot assure you that any additional capital will be available on a timely basis, on acceptable terms, or at all, and such additional financing may result in further dilution to our stockholders.

Our capital requirements will depend on many factors, including, but not limited to:

- market acceptance of our products and product enhancements, and the overall level of sales of our products;
- our ability to control costs;
- the supply of key components for our products;
- our ability to increase revenue and net income;
- increased research and development expenses and sales and marketing expenses;
- our need to respond to technological advancements and our competitors' introductions of new products or technologies;

Table of Contents

- capital improvements to new and existing facilities and enhancements to our infrastructure and systems;
- potential acquisitions of businesses and product lines;
- our relationships with customers and suppliers;
- government budgets, political agendas and other funding issues, including potential delays in government contract awards;
- our ability to successfully negotiate credit arrangements with our bank and the state of the financial markets, in general; and
- general economic conditions, including the effects of the current economic slowdown and international conflicts.

If our capital requirements are materially different from those currently planned, we may need additional capital sooner than anticipated. If additional funds are raised through the issuance of equity or convertible debt securities, the percentage ownership of our stockholders will be reduced and such securities may have rights, preferences and privileges senior to our common stock. Additional equity or debt financing may not be available on favorable terms, on a timely basis, or at all. If adequate funds are not available or are not available on acceptable terms, we may be unable to continue our operations as planned, develop or enhance our products, expand our sales and marketing programs, take advantage of future opportunities or respond to competitive pressures.

We may be unable to maintain profitability on a quarterly or annual basis. We cannot assure you that we will be able to sustain or improve our financial performance, or that we will be able to continue to achieve profitability on a quarterly or annual basis in the future. Our ability to maintain profitability in future periods could be impacted by budgetary constraints, government and political agendas, economic instability and other items that are not in our control. Most of our expenses are fixed in advance. As such, we generally are unable to reduce our expenses significantly in the short-term to compensate for any unexpected delay or decrease in anticipated revenues. As a result, we may experience operating losses and net losses in the future, which would make it difficult to fund our operations and achieve our business plan, and could cause the market price of our common stock to decline.

The trading price of our common stock is highly volatile. The trading price of our common stock has been subject to wide fluctuations in the past. Since January 2001, our Class A common stock (now known as our common stock) has traded at prices as low as \$0.45 per share and as high as \$8.00 per share. The market price of our common stock could continue to fluctuate in the future in response to various factors, including, but not limited to:

- quarterly variations in operating results;
- our ability to control costs, improve cash flow and sustain profitability;
- our ability to raise additional capital;
- shortages announced by suppliers;
- announcements of technological innovations or new products or applications by our competitors, customers or us;
- transitions to new products or product enhancements;
- acquisitions of businesses, products or technologies;
- the impact of any litigation;
- changes in investor perceptions;
- government funding, political agendas and other budgetary constraints;
- changes in earnings estimates or investment recommendations by securities analysts; and
- international conflicts, political unrest and acts of terrorism.

Table of Contents

The stock market in general has from time to time experienced volatility, which has often affected the market prices of equity securities of many technology companies. This volatility has often been unrelated to the operating performance of these companies. These broad market fluctuations may adversely affect the market price of our common stock. In the past, companies that have experienced volatility in the market price of their securities have been the subject of securities class action litigation. If we were to become the subject of a class action lawsuit, it could result in substantial losses and divert management's attention and resources from other matters.

Certain provisions of our charter documents may discourage a third party from acquiring us and may adversely affect the price of our common stock. Certain provisions of our certificate of incorporation could make it difficult for a third party to acquire us, even though an acquisition might be beneficial to our stockholders. Such provisions could limit the price that investors might be willing to pay in the future for shares of our common stock. Under the terms of our certificate of incorporation, our Board of Directors is authorized to issue, without stockholder approval, up to 2,000,000 shares of preferred stock with voting, conversion and other rights and preferences superior to those of our common stock. In August 2009, we adopted a stockholder rights plan and declared a dividend of preferred stock purchase rights to our stockholders. Generally, the stockholder rights plan provides that if a person or group acquires 15% or more of our common stock, subject to certain exceptions and under certain circumstances, the rights may be exchanged by us for common stock or the holders of the rights, other than the acquiring person or group, could acquire additional shares of our capital stock at a discount off of the then current market price. Such exchanges or exercise of rights could cause substantial dilution to a particular acquirer and discourage the acquirer from pursuing our company. The mere existence of a stockholder rights plan often delays or makes a merger, tender offer or proxy contest more difficult.

ITEM 4. (REMOVED AND RESERVED)

ITEM 5. OTHER INFORMATION

10b5-1 Plans

On July 27, 2010, two of our executive officers, James S. Miele and Greg McKhann, entered into stock selling plans pursuant to Rule 10b5-1 promulgated under the Securities Exchange Act of 1934, as amended. Mr. Miele's plan covers the sale over the next six months of up to an

aggregate of 40,000 shares issuable upon exercise of a stock option held by him, which expires on September 26, 2011. Mr. Miele's previous 10b5-1 plan which covered these option shares expired on July 15, 2010. Mr. McKhann has authorized the sale over the next six months of up to an aggregate of 71,632 shares of our common stock under his plan. The shares covered by the above-described 10b5-1 plans will be sold if the price per share of our common stock reaches the amounts designated in the applicable plan.

Employment Agreements

On July 27, 2010, we entered into a letter agreement as well as a change in control agreement with Abbas Mohaddes, our Chief Executive Officer. The letter agreement provides for salary continuation payments for 12 months following termination and payment of 50% of his target bonus for the applicable year, payable at the end of the 12 month salary continuation period, in the event that Mr. Mohaddes is terminated without cause (as defined in the letter agreement) within three years after the effective date of the agreement. If his employment is terminated as a result of death or disability, then no salary continuation or other severance payments will be made but the vesting of any options, restricted stock or other similar awards then held by him will be accelerated by one year. The letter agreement also provides that Mr. Mohaddes will be granted a restricted stock unit award covering 50,000 shares of our common stock, which award will vest over four years. The change in control agreement provides for a lump sum payment of one year's base pay and 50% of his target bonus for the year in the event of an involuntary termination (as defined in the change in control agreement) of Mr. Mohaddes' employment in connection with or within 12 months after a change in control, except that such payment will be reduced to 50% of the annual base pay and no bonus if the involuntary termination is due to his voluntary resignation which does not occur within the first six months after the change in control. Mr. Mohaddes will also be entitled to receive reimbursement for the cost of COBRA coverage for a period of up to one year following any involuntary termination of his employment. The change in control agreement terminates on the fifth anniversary of the date of the agreement, unless earlier terminated in accordance therewith. No amounts will be payable and no acceleration of the vesting of any options or equity based awards will occur under the letter agreement in the event of a termination of Mr. Mohaddes' employment after a change in control; after a change in control, the change in control agreement will determine whether or not Mr. Mohaddes will be entitled to any payments or benefits, and the amount of any payments or benefits, in the event of the termination of his employment.
