#### **Delaware Investments Closed-End Municipal Bond Funds**

April 8, 2008

The managers of Delaware closed-end municipal bond funds provided the answers to the questions below as a review of the funds activities for the fiscal year that ended March 31, 2008.

What were some of the major news events that influenced the investment environment for municipal bonds during the fiscal year ended March 31, 2008?

The fiscal year was eventful, with a credit crisis triggered by difficulties in the mortgage markets. Investment conditions within the municipal bond market as well as in the broader fixed income markets were extremely perilous. We defined several distinct phases as we looked back on the year. Each phase presented its unique challenges to bond investors and affected the municipal markets to varying degrees.

During the early part of the fiscal year, the municipal market was fairly steady. The fixed income markets were warned early of things to come as news items highlighting the problems of hedge funds invested in securities with exposure to subprime mortgages briefly shook the taxable markets.

During the summer months, the first real phase of the credit crisis hit and the municipal markets participated fully. This represented a change from previous credit events, when the flight to quality was led by the Treasury market and closely followed by the relatively [safe] municipal bond asset class. This time, municipals experienced price deterioration that looked more like those that generally take place within the high yield and emerging markets bond sectors. We believe the difference was a result of selling pressure by nontraditional buyers, whose buying activity during the previous several years had helped the municipal market to frequently outperform in the face of record and near-record new issue supply.

We believe these alternative investors needed to deleverage in this tenuous market and accordingly sold what assets they could. Compounding the problem, the dealer community scapital was declining. As a result, members of the dealer community pulled back their inventory positions and were less willing to provide liquidity into the market.

What began as a liquidity issue, though, evolved into a credit crisis in November. Concerns grew stronger regarding credit ratings for monoline insurers, which underwrite insurance for much of the debt that municipalities issue. In recent years, these insurance companies have sought faster growth by insuring new and different types of investment vehicles, including the structured investment vehicles that many believe to be at the root of the credit crisis. As a result, several AAA-rated insurance providers were warned during the calendar year that they might be required to increase their capital levels to maintain top-tier ratings.

The fears surrounding insurer credit ratings further amplified outflows from the municipal debt market. These fears forced already wary municipal bond investors to re-evaluate credit ratings on what many had considered to be safe investments.

In the first quarter of calendar 2008, actual downgrades of some of the AAA-rated insurers triggered pricing pressure on municipal bonds. It impacted both leveraged buyers of municipal bonds and a funding vehicle within the municipal market called auction rate securities, or ARS. The leveraged buyers, known as tender option bond programs (TOBs), were squeezed as their hedges worked against them.

TOBs allow owners to borrow at a short-term rate and reinvest the proceeds in higher-yielding, longer-term bonds. These investors were long municipal bonds, the underperforming asset. This led to margin calls and more selling of tax-exempt securities, and eventually to more downward pressure on municipal prices.

Another casualty of the insurer downgrades during the quarter was the tax-exempt ARS market. These bonds have long maturities, but have rates that reset between 7 and 35 days based on an auction process that matches potential

The views expressed are current as of the date of this report and are subject to change.

**Delaware Investments Closed-End Municipal Bond Funds** 

buyers with sellers. Under normal market conditions, a successful auction provides face value liquidity for any holders wishing to exit the position. As the ratings of Financial Guaranty Insurance Company (FGIC) and XL Capital Assurance were downgraded from AAA, buyers of these securities became very cautious. At the same time, the dealer community, facing liquidity constraints, was in no position to step in and fill the void. Auctions started failing, forcing resets to contractual maximum rates, which often were punitive from the issuers perspective. Several issuers have responded by converting their ARS into longer-term securities.

These forces culminated at the end of February. The already constrained dealer community had shifted its focus primarily to the auction rate market. The TOBs had massive sell lists of intermediate and long-term bonds. Without strong dealer support, the municipal market suffered. Long-term municipal yields rose for three straight days while the Treasury market rallied.

New issue volume nationally set a record in calendar 2007, although issuance slowed as the year progressed. Overall, a record \$427 billion in new tax-exempt municipal bonds were issued in 2007. New-issue volume early in 2008 remains quiet, with the pace through the end of March off 25% from the same period one year ago (source: Bond Buyer).

#### How did the technical environment change during the year?

The yield curve steepened significantly during the year. The fiscal year began with the curve historically narrow [] at 58 basis points between 2- and 30-year maturity bonds (yields of 3.54% and 4.12%, respectively). The steepening of the curve occurred with each phase of the liquidity crisis, and by the end of March 2008 the curve had widened to 267 basis points.

As might be expected given the credit environment described earlier, municipal bonds traded more cheaply than Treasury bonds as the year wore on. Municipal bonds started the year with 30-year yields at 85% of those of long Treasury bonds. Municipal bonds normally trade with lower yields than Treasury bonds due to their favorable tax treatment. When the first phase of the credit crunch hit in July, the municipal bond to Treasury yield ratio began to increase in July and jumped higher with each subsequent credit event.

At the end of February 2008, the relative yield ratios for municipals soared under the selling pressure from the TOBs. The ratio of yields between 30-year municipal and Treasury bonds exploded from an already historically cheap 103.4% to an unprecedented 116.3%. In March, municipals recovered only modestly and ended the quarter extremely cheap relative to Treasury bonds  $\square$  at 113.4%. To put these ratios in perspective, this ratio has averaged 93% during the past 10 years and the previous high (with available data going back to 1981) was 102.5%. (Source: Thomson.)

#### Delaware Investments Arizona Municipal Income Fund, Inc.

#### What conditions prevailed in the Arizona economy?

Arizona□s housing market has softened significantly since March 2007, like that of much of the nation. Median home prices in the Phoenix area had declined 15% year-over-year as of December 2007, significantly more than the national median decline of 9% (source: Standard & Poor□s).

Recent slowing in the rate of employment reflects the impact of a weakened housing sector, which can also be seen in the state sconstruction sectors. After two years of double-digit growth, employment figures for calendar year 2007 show a 6.6% decline in construction jobs. (Source: Moody s.)

According to U.S. Labor Department data, Arizona unemployment rates, at 4% during the month of February 2008, remained below national rates of 4.8%. Arizona\[ \]s nonfarm payroll employment growth of 1.2% in 2007 was considerably weaker than the state\[ \]s 5% growth in 2006 (source: Moody\[ \]s).

Recurring revenues for the state s fiscal year ended June 30, 2007, as well as initial estimates through Dec. 31, 2008, from sales and individual income tax collections, were lower than projected thus far. The decline

2

in tax collections corresponds to a 5% income tax cut granted for fiscal year July 1, 2007, through June 30, 2008. The state also lost \$200 million of ongoing property tax revenues last fiscal year when it elected to eliminate the state equalization property tax for fiscal years 2007 through 2009.

The governor many proposals to bridge the resulting budget gaps include a hiring freeze on all cabinet agencies, budget reductions, and deferring capital outlay projects. The state of municipal bond issuance in Arizona reflects the need to offset such budget woes through a significant issuance increase of 61.4% in 2007, to total \$8.8 billion (source: Bond Buyer).

#### How did you position the Fund?

We focused on balancing the Fund  $\square$  both to remain true to our core philosophy of generating competitive tax-exempt income and to strategically position the investment portfolio  $\square$  given our expectation of a steeper yield curve and a tenuous credit environment.

During the year, we methodically adjusted the Fund\( \sigma\) spositioning to mitigate losses and to seek yield, where possible. For example, we reduced the Fund\( \sigma\) sexposure to insured bonds (from 45% to 38% as a percentage of net assets, including the liquidation value of preferred stock) at fiscal year end. On average, the Lehman Brothers Municipal Bond Index consisted of 43% insured bonds during the fiscal year. (This percentage dropped in February 2008 to 34%, as Lehman only considers the AAA-rated insurers within their \( \subseteq\) insured\( \subseteq\) sub-index and during the month a couple of the insurers lost their AAA rating.)

This underweight served the Fund well given the panic that overtook many investors regarding the quality of insurance that wraps municipal bond issues. As measured by the returns of the Lehman indices, the Insured Municipal Index underperformed the broad Lehman Brothers Municipal Bond Index for the 12 months ended March 31, 2008 (1.06% versus 1.90%, respectively) (source: Lehman Brothers).

Given our expectations for a steeper yield curve, we also trimmed the Fund\[ \]s holdings on the long end (20-plus years) of the yield curve in favor of a greater investment in bonds with 3- to 15-year maturities \[ \] what we refer to as the \[ \]belly\[ \] of the yield curve. We believe that this change helped Fund performance during the year. Again, as gauged by the Lehman Brothers Municipal Bond Index returns \[ \] this time broken down by maturity \[ \] the belly outperformed the long end for the fiscal year. We also increased (from 26% to 33% as a percentage of net assets, including the liquidation value of preferred stock) the Fund\[ \] s exposure to refunded bonds (also known as pre-refunded bonds) during the year. Pre-refunded bonds were among the better-performing bonds within the municipal market. They face minimal credit risk because they are backed by the invested debt proceeds of a second bond issue, which typically consist of U.S. Treasury securities.

#### What sectors or individual securities were noteworthy for their effect on Fund performance?

The largest detractors to the Fund $\square$ s return were functions of credit and curve  $\square$  investments further out on the yield curve and lower in quality. Within the Fund, bonds issued to finance education, as well as hospitals and other healthcare projects, fit this mold, underperforming other areas of the municipal bond market during the fiscal year. For example, among Fund holdings of healthcare bonds, a University Medical Center Corporation bond performed poorly. Rated Baa1 by Moody $\square$ s and BBB+ by S&P, this revenue bond has a long final maturity of 2035.

On the positive side, relatively safe investments such as pre-refunded bonds were among the better-performing bonds within the municipal market. The two best-performing bonds were holdings that had been pre-refunded by the issuer during the year. Bonds issued by Oro Valley Municipal Property Corporation were among the examples of holdings whose performance benefited from pre-refunding during the year. The Fund\[ \] s position in bonds issued by Scottsdale Industrial Development Authority for Scottsdale Healthcare also added to the Fund\[ \] s return. This bond was refinanced before the year began.

# Portfolio management review

**Delaware Investments Closed-End Municipal Bond Funds** 

#### Delaware Investments Colorado Municipal Income Fund, Inc.

#### What conditions prevailed in the Colorado economy?

Colorado seconomy continues to show modest growth despite growing concern about the national economic picture. However, recent economic data suggest that Colorado could experience a mild slowdown. According to the Colorado Office of State Planning and Budgeting, the unemployment rate was 3.8% in Colorado for calendar year 2007, the lowest reading since 2000. Although Colorado unemployment rate of 4.4% in the month of February 2008 is below national level of 4.8% for the same month, this subsequent rise in Colorado is evidence that the employment outlook has softened since December (source: U.S. Department of Labor).

After increasing 8.3% in fiscal year July 1, 2006, through June 30, 2007, due to healthy increases in individual income taxes, the state s gross general fund revenue forecasts are significantly lower for the upcoming years. National and global economic influences will likely continue to limit growth over the next year or two. Due to decreases associated with individual income tax receipts along with the near-term negative impact from the federal stimulus package, the forecast for state general fund revenues for fiscal years 2007 2008 fell \$127.3 million. In spite of a weakening income tax base that is reducing expectations, total sales tax collections have remained relatively strong and are expected to increase 7.1% for the biennium. (Source: Colorado Office of State Planning and Budgeting.)

Municipal bond issuance in Colorado decreased 6.2% in 2007 to a total of almost \$8.3 billion (source: The Bond Buyer).

#### In light of this macroeconomic environment, how did you position the Fund?

We focused on balancing the Fund  $\square$  both to remain true to our core philosophy of generating competitive tax-exempt income and to strategically position the investment portfolio  $\square$  given our expectation of a steeper yield curve and a tenuous credit environment.

During the year, we methodically adjusted the Fund positioning to mitigate losses and to seek yield, where possible. For example, we reduced the Fund exposure to insured bonds (from 63% to 56% as a percentage of net assets, including the liquidation value of preferred stock) at fiscal year end. Recall that during the fiscal year, the Fund smandate was changed from an insured to a general Colorado fund. On average, the Lehman Brothers Municipal Bond Index consisted of 43% insured bonds during the fiscal year. (This percentage dropped in February 2008 to 34%, as Lehman only considers the AAA-rated insurers within their insured sub-index and during the month a couple of the insurers lost their AAA rating.)

Even at the reduced level, this overweight would have had a negative influence on the Fund sreturns given the panic that overtook many investors regarding the quality of insurance that wraps municipal bond issues. As measured by the returns of the Lehman indices, the Insured Municipal Index underperformed the broad Lehman Brothers Municipal Bond Index for the 12 months ended March 31, 2008 (1.06% versus 1.90%, respectively). (Source: Lehman Brothers.)

Given our expectations for a steeper yield curve, we also trimmed the Fund $\square$ s holdings on the long end (20-plus years) of the yield curve in favor of a greater investment in bonds with 2- to 15-year maturities  $\square$  what we refer to

as the <code>||belly||</code> of the yield curve. We believe that this change helped Fund performance during the year, and we would expect it to continue to help if the curve steepens further. Again, as gauged by the Lehman Brothers Municipal Bond Index returns <code>||</code> this time broken down by maturity <code>||</code> the belly outperformed the long end for the fiscal year. We also increased (from 32% to 38.5% as a percentage of net assets, including the liquidation value of preferred stock) the Fund<code>||</code>s exposure to refunded bonds (also known as pre-refunded bonds) during the year. Pre-refunded bonds were among the better-performing bonds within the municipal market. They face minimal credit risk because they are backed by the invested debt proceeds of a second bond issue, which typically consist of U.S. Treasury securities.

4

#### What sectors or individual securities were noteworthy for their effect on Fund performance?

The largest detractors to the Fund\( \) return were functions of credit and curve \( \) investments further out on the yield curve and lower in quality. Within the Fund, longer bonds insured by the insurers that received downgrades provided the weakest performance during the fiscal year. Representative of these was a Denver revenue bond issued for the Convention Center. Due in 2035, the bond was issued with insurance by XL Capital Assurance. During the first quarter of 2008, all three ratings agencies downgraded the bonds from AAA. The insurer-strength ratings for XL Capital from Moody\( \) S&P, and Fitch were A3, A-, and A, respectively.

On the positive side, relatively safe investments such as pre-refunded bonds were among the better-performing bonds within the municipal market. Two of the best-performing bonds were holdings that were pre-refunded by the issuer during the year. Bonds issued by Northwest Parkway Public Highway Authority were among the examples of holdings where performance benefited from pre-refunding during the year. The Fund position in revenue bonds issued by Aurora, Colo., also added to the Fund streturn. These bonds were refinanced before the year began.

#### Delaware Investments Minnesota Municipal Income Fund II, Inc.

#### What conditions prevailed in the Minnesota economy?

In our opinion, Minnesota has a fundamentally sound economy today. With a 30% share of local jobs, the service sector is the largest employer in Minnesota, with major employers in healthcare and business service companies. For the past two years the state has lagged the nation in employment growth. Unemployment levels have typically been one to two points below national averages. In recent months, the state has recorded levels higher than the national average. (Source: Moody[]s and Standard & Poor[]s.)

According to the Minnesota Department of Finance, tax revenues for fiscal 2007 were up 2.2% and the state general fund ended fiscal 2007 with an increase over 2006.

The enacted \$34.5 billion 2008 and 2009 budget projects total general fund spending to increase by more than 9%. Standard & Poor\sqrt{s} reports that a revision to the economic outlook resulted in the projection of lower revenues and a structural imbalance for the current and coming bienniums. State general fund revenues are now forecast to total \$32.5 billion, leaving a projected \$935 million deficit for the current biennium, with larger deficits predicted for the future.

Municipal bond issuance in Minnesota decreased 0.2% in calendar 2007 to a total of almost \$6.7 billion (source: The Bond Buyer).

#### How did you position the Fund?

We focused on balancing the Fund  $\square$  both to remain true to our core philosophy of generating competitive tax-exempt income and to strategically position the investment portfolio  $\square$  given our expectation of a steeper yield curve and a tenuous credit environment.

During the year, we monitored and methodically adjusted the Fund spositioning to mitigate losses and to seek yield, where possible. For example, the Fund maintained about a 28% (as a percentage of net assets, including the liquidation value of preferred stock) exposure to insured bonds. On average, the Lehman Brothers Municipal Bond Index consisted of 43% insured bonds during the fiscal year. (This percentage dropped in February 2008 to

34%, as Lehman only considers the AAA-rated insurers within their <code>[insured[]</code> sub-index and during the month a couple of the insurers lost their AAA rating.)

This underweight served the Fund well given the panic that overtook many investors regarding the quality of insurance that wraps municipal bond issues. As measured by the returns of the Lehman indices, the Insured Municipal Index underperformed the broad Lehman Brothers Municipal Bond Index for the 12 months ended March 31, 2008 (1.06% versus 1.90%, respectively.) (Source: Lehman Brothers.)

Given our expectations for a steeper yield curve, we trimmed the Fund $\square$ s holdings on the long end (20-plus years) of the yield curve in favor of a greater investment in bonds with 2- to 15-year maturities  $\square$  what we refer to as

# Portfolio management review

**Delaware Investments Closed-End Municipal Bond Funds** 

the <code>[belly]</code> of the yield curve. We believe that this change helped Fund performance during the year, and we would expect it to continue to help if the curve steepens further. Again, as gauged by the Lehman Brothers Municipal Bond Index returns <code>[]</code> this time broken down by maturity <code>[]</code> the belly outperformed the long end for the fiscal year. We also increased (from 24% to 26.5% as a percentage of net assets, including the liquidation value of preferred stock) the <code>Fund[]</code>s exposure to refunded bonds (also known as pre-refunded bonds) during the year. Pre-refunded bonds were among the better-performing bonds within the municipal market. They face minimal credit risk because they are backed by the invested debt proceeds of a second bond issue, which typically consist of U.S. Treasury securities.

#### What sectors or individual securities were noteworthy for their effect on Fund performance?

The largest detractors to the Fund sreturn were functions of credit and curve investments further out the yield curve and lower in quality. Within the Fund, bonds issued to finance education, as well as hospitals and other healthcare projects, fit this mold, underperforming other areas of the municipal bond market during the fiscal year. Likewise, industrial development revenue (IDR) bonds, which are issued by a government agency on behalf of a private sector company, detracted from the Fund sreturns largely for the same reasons. Among Fund holdings of healthcare bonds, a revenue bond issued by the City of St. Paul, due in 2036, performed poorly. Rated Baa1 by Moody and BBB by S&P, this long revenue bond was issued to finance a not-for-profit integrated healthcare system.

On the positive side, relatively safe investments such as pre-refunded bonds were among the better-performing bonds within the municipal market. Three of the best-performing bonds were pre-refunded by the issuer during the year. Bonds issued by the City of Duluth for the Benedictine Health System were among the examples of holdings whose performance benefited from pre-refunding during the year. The Fund position in electric revenue bonds issued by the City of Rochester also added to the Fund sreturn. These bonds were re-financed before the year began.

#### **Delaware Investments National Municipal Income Fund**

#### How was the Fund positioned differently during this fiscal year?

Effective Oct. 15, 2007, the name of the Fund was changed from Florida Insured Municipal Income Fund to National Municipal Income Fund, reflecting a changed investment strategy. The new strategy eliminated a fundamental investment policy requiring the Fund to invest 80% of its net assets in insured, AAA-rated municipal bonds issued by the State of Florida. The Fund may, as a nonfundamental policy, (1) invest without limitation in uninsured, investment grade municipal securities of states other than Florida (including those rated below AAA) and (2) invest up to 20% of its net assets in noninvestment grade municipal securities. As of March 31, 2008, about 80% of the Fund soldings remained in Florida bond issues.

#### Nationwide, what were a few highlights of the municipal debt market?

Bond sales in the United States for 2007 increased to more than \$427 billion, which is 10% more than the 2006 figure of \$388 million. This was record growth, yet the pace of sales slowed late in the calendar year and into 2008. In the first quarter of 2008, new-issue volume was off markedly from one year ago [] with the \$80 billion coming to market representing a 25% decline from the same period a year ago (source: The Bond Buyer). Related to the overall slowing economic growth, unemployment across the country moved higher to 5.1% in March 2008. Most significantly, the housing crisis blamed on subprime mortgage woes had an extremely negative effect on the country[]s overall economy, as described in the first section of this management review beginning on page 1.

#### How did you position the Fund?

6

During the year, we methodically adjusted the Fund positioning to mitigate losses and to seek yield, where possible. For example, we reduced the Fund exposure to insured bonds (from 93% to 79% as a percentage of net assets, including the liquidation value of preferred stock) at fiscal year end. Recall that during the fiscal year, the Fund mandate was changed from an insured to a general market fund. On average, the Lehman Brothers Municipal Bond Index consisted of 43% insured bonds during the fiscal year. (This percentage dropped in February 2008 to 34%, as Lehman only considers the AAA-rated insurers within their insured sub-index and during the month a couple of the insurers lost their AAA rating.)

Even at the reduced level, this overweight would have had a negative influence on the Fund sreturns given the panic that overtook investors regarding the quality of insurance that wraps municipal bond issues. As measured by the returns of the Lehman indices, the Insured Municipal Index underperformed the broad Lehman Brothers Municipal Bond Index for the 12 months ended March 31, 2008 (1.06% versus 1.90%, respectively). (Source: Lehman Brohers.)

Given our expectations for a steeper yield curve, we also trimmed the Fund $\square$ s holdings on the long end (20-plus years) of the yield curve in favor of a greater investment in bonds with 2- to 15-year maturities  $\square$  what we refer to as the  $\square$ belly $\square$  of the yield curve. Exposure to the long end of the curve was reduced from 76% to 60% at fiscal year end. We believe that this change helped Fund performance during the year, and we would expect it to continue to help if the curve steepens further. Again, as gauged by the Lehman Brothers Municipal Bond Index returns  $\square$  this time broken down by maturity  $\square$  the belly outperformed the long end for the fiscal year.

#### What sectors of individual securities were noteworthy for their effect on Fund performance?

The largest detractors to the Fund streturn were largely functions of curve investments further out on the yield curve. Within the Fund, longer bonds insured by the insurers receiving downgrades provided the weakest performance during the fiscal year. Representative of these was a Miami-Dade revenue bond issued for the international airport. Due in 2037, the bond was issued with insurance by Financial Guaranty Insurance Company (FGIC). During the first quarter of 2008, all three ratings agencies downgraded the bonds from AAA. As of the end of the fiscal year, the insurer-strength ratings for FGIC from Moody s, S&P, and Fitch were Baa3, BB, and BBB, respectively. This bond is rated higher (A2, A-, and A, respectively) based upon the underlying strength of the issue itself.

On the positive side, bonds in the [belly] of the curve and pre-refunded bonds were among the better-performing bonds. Bonds that have been pre-refunded face minimal credit risk because they are backed by the invested debt proceeds of a second bond issue, which typically consist of U.S. Treasury securities. One such bond was a Florida Board of Education bond originally due in 2021, pre-refunded to its first call date in 2010.

<sup>&</sup>lt;sup>1</sup> Total investment return is calculated assuming a purchase of common stock on the opening of the first day and a sale on the closing of the last day of each period reported. Dividends and distributions, if any, are assumed for the purposes of this calculation to be reinvested at prices obtained under the Fund∫s dividend reinvestment plan. Generally, total investment return based on net asset value will be higher than total investment return based on market value in periods where there is an increase in the discount or a decrease in the premium of the market value to the net asset value from the beginning to the end of such periods. Conversely, total investment return based on net asset value will be lower than total investment return based on market value in periods where there is a decrease in the discount or an increase in the premium of the market value to the net asset value from the beginning to the end of such periods.

### Notes to financial statements

#### **Delaware Investments Closed-End Municipal Bond Funds**

March 31, 2008

Delaware Investments Arizona Municipal Income Fund, Inc. (Arizona Municipal Fund); Delaware Investments Colorado Municipal Income Fund, Inc. (Colorado Municipal Fund) (formerly Delaware Investments Colorado Insured Municipal Income Fund) and Delaware Investments Minnesota Municipal Income Fund II, Inc. (Minnesota Municipal Fund II) are organized as Minnesota corporations and Delaware Investments National Municipal Income Fund, (National Municipal Fund) (formerly Delaware Investments Florida Insured Municipal Income Fund) is organized as a Massachusetts Business Trust (each referred to as a Fund and collectively as the Funds). Arizona Municipal Fund, Colorado Municipal Fund, Minnesota Municipal Fund II and National Municipal Fund are considered diversified closed-end management investment companies under the Investment Company Act of 1940, as amended. The Funds common shares trade on the American Stock Exchange. The Funds preferred shares are traded privately through a remarketing agent.

The investment objective of each Fund is to provide high current income exempt from federal income tax and from the personal income tax of its state, if any, consistent with the preservation of capital. Each Fund, except National Municipal Income Fund, will seek to achieve its investment objective by investing substantially all of its net assets in investment grade, tax-exempt municipal obligations of its respective state.

#### 1. Significant Accounting Policies

The following accounting policies are in accordance with U.S. generally accepted accounting principles and are consistently followed by the Funds.

Security Valuation  $\square$  Long-term debt securities are valued by an independent pricing service or broker and such prices are believed to reflect the fair value of such securities. Short-term debt securities having less than 60 days to maturity are valued at amortized cost, which approximates market value. Generally, other securities and assets for which market quotations are not readily available are valued at fair value as determined in good faith under the direction of each Fund $\square$ s Board of

Directors/Trustees. In determining whether market quotations are readily available or fair valuation will be used, various factors will be taken into consideration, such as market closures, aftermarket trading or significant events after local market trading (e.g., government actions or pronouncements, trading volume or volatility on markets, exchanges among dealers, or news events).

In September 2006, the Financial Accounting Standards Board (FASB) issued FASB Statement No. 157 □Fair Value Measurements□ (Statement 157). Statement 157 establishes a framework for measuring fair value in generally accepted accounting principles, clarifies the definition of fair value within that framework, and expands disclosures about the use of fair value measurements. Statement 157 is intended to increase consistency and comparability among fair value estimates used in financial reporting. Statement 157 is effective for fiscal years beginning after November 15, 2007. Management does not expect the adoption of Statement 157 to have a material impact on the amounts reported in the financial statements.

**Federal Income Taxes** [] The Fund intends to continue to qualify for federal income tax purposes as a regulated investment company under Subchapter M of the Internal Revenue Code of 1986, as amended, and make the requisite distributions to shareholders. Accordingly, no provision for federal income taxes has been made in the financial statements.

Effective September 30, 2007, the Funds adopted FASB Interpretation No. 48 [Accounting for Uncertainty in Income Taxes] (FIN 48). FIN 48 provides guidance for how uncertain tax positions should be recognized, measured, presented, and disclosed in the financial statements. FIN 48 requires the evaluation of tax positions taken or expected to be taken in the course of preparing the Funds tax returns to determine whether the tax positions are [more-likely-than-not] of being sustained by the applicable tax authority. Tax positions not deemed to meet the more-likely-than-not threshold would be recorded as a tax benefit or expense in the current year. The adoption of FIN 48 did not result in the recording of any tax benefit or expense in the current period.

**Use of Estimates** [] The preparation of financial statements in conformity with U.S. generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Interest and Related Expenses [] Interest and related expenses include, but are not limited to, interest expense, remarketing fees, liquidity fees, and trustees[] fees from the Minnesota Municipal Fund II[]s participation in inverse floater programs where the Fund has transferred its own bonds to a trust that issues floating rate securities with an aggregate principal amount equal to the principal of the transferred bonds. In conveyance of the bond, the Fund receives the inverse floating rate securities and cash from the trust. As a result of certain rights retained by the Fund, the transfer of the bond is not considered a sale, but rather a form of financing for accounting purposes whereby the cash received is recorded as a liability and interest expense is recorded based on the interest rate of the floating rate securities. Remarketing fees, liquidity fees, and trustees[] fees expenses are recorded on the accrual basis.

For the year ended March 31, 2008, the Minnesota Municipal Fund II had an average daily liability from the participation in inverse floater programs of \$8,500,000 and recorded interest expense at an average rate of 3.91%.

Other 

Expenses directly attributable to a Fund are charged directly to that Fund. Other expenses common to various funds within the Delaware Investments® Family of Funds are generally allocated amongst such funds on the basis of average net assets. Management fees and some other expenses are paid monthly. Security transactions are recorded on the date the securities are purchased or sold (trade date) for financial reporting purposes. Costs used in calculating realized gains and losses on the sale of investment securities are those of the specific securities sold. Interest income is recorded on the accrual basis. Discounts and premiums are amortized to interest income over the lives of the respective securities. Each Fund declares and pays dividends from net investment income monthly and distributions from net realized gain on investments, if any, annually. In addition, in

## Notes to financial statements

**Delaware Investments Closed-End Municipal Bond Funds** 

#### 1. Significant Accounting Policies (continued)

order to satisfy certain distribution requirements of the Tax Reform Act of 1986, the Funds may declare special year-end dividend and capital gains distributions during November or December to shareholders of record on a date in such month. Such distributions, if received by shareholders by January 31, are deemed to have been paid by the Funds and received by

shareholders on the earlier of the date paid or December 31 of the prior year.

The Funds receive earnings credits from their custodian when positive cash balances are maintained, which are used to offset custody fees. The expense paid under this arrangement is included in custodian fees and on the statements of operations with the corresponding expense offset shown as [expense paid indirectly.]

#### 2. Investment Management, Administration Agreements and Other Transactions with Affiliates

In accordance with the terms of its respective investment management agreement, each Fund pays Delaware Management Company (DMC), a series of Delaware Management Business Trust and the investment manager, an annual fee of 0.40% which is calculated daily based on the average weekly net assets of each Fund, excluding the liquidation value of the preferred stock.

Effective October 1, 2007, Delaware Service Company, Inc. (DSC), an affiliate of DMC, provides fund accounting and financial administration oversight services to the Funds. For these services, the Funds pay DSC fees based on the aggregate daily net assets of the Delaware Investments® Family of Funds at the following annual rate: 0.005% of the first \$30 billion; 0.0045% of the next \$10 billion; 0.004% of the next \$10 billion; and 0.0025% of aggregate average daily net assets in excess of \$50 billion. The fees payable to DSC under the service agreement described above are allocated among all Funds in the Delaware Investments® Family of Funds on a relative net asset value basis. Prior to October 1, 2007, DSC provided fund accounting and administration services to the Funds and received a fee at an annual rate of 0.04% of average daily net assets excluding the liquidation value of the preferred stock. For the year ended March 31, 2008, the Funds were charged as follows:

Arizona Municipal	Colorado Municipal	Minnesota Municipal	National Municipal
Fund	Fund	Fund II	Fund
\$15,303	\$25.151	\$59.204	\$12.253

At March 31, 2008, each Fund had liabilities payable to affiliates as follows:

	Arizona	Colorado	Minnesota	National
	Municipal	Municipal	Municipal	Municipal
	Fund	Fund	Fund II	Fund
Investment management fee payable to DMC Accounting administration and other expenses	\$22,158	\$36,387	\$86,162	\$17,469
payable to DSC	6,620	17,200	26,074	5,880
Other expenses payable to DMC and affiliates*	1,576	4,747	3,793	4,540

<sup>\*</sup>DMC, as part of its administrative services, pays operating expenses on behalf of each Fund and is reimbursed on a periodic basis. Such expenses include items such as printing of shareholder reports, fees for audit, legal and tax services, stock exchange fees, custodian fees and directors/trustees fees.

As provided in the investment management agreement, each Fund bears the cost of certain legal and tax services, including internal legal and tax services provided to each Fund by DMC and/or its affiliates employees. For the year ended March 31, 2008, each Fund was charged for internal legal and tax services provided by DMC and/or its affiliates employees as follows:

Arizona	Colorado	Minnesota	National
Municipal	Municipal	Municipal	Municipal
Fund	Fund	Fund II	Fund
\$2,539	\$4,238	\$9,981	\$2,021

Directors[]/Trustees[] fees include expenses accrued by the Funds for each Director[s/Trustee[]s retainer and per meeting fees. Certain officers of DMC and DSC are officers and/or Directors/Trustees of the Funds. These officers and Directors/Trustees are paid no compensation by the Funds.

32

#### 3. Investments

For the year ended March 31, 2008, the Funds made purchases and sales of investment securities other than short-term investments as follows:

	Arizona	Colorado	Minnesota	National
	Municipal	Municipal	Municipal	Municipal
	Fund	Fund	Fund II	Fund
Purchases	\$12,576,979	\$18,076,709	\$15,397,004	\$9,025,440
Sales	12,061,215	16,698,015	16,919,545	9,443,444

At March 31, 2008, the cost of investments and unrealized appreciation (depreciation) for federal income tax purposes for each Fund were as follows:

	Arizona Colorado Municipal Municipal		Minnesota Municipal	National Municipal
	Fund	Fund	Fund II	Fund
Cost of investments	\$64,463,114	\$105,941,375	\$248,475,722	\$52,799,148
Aggregate unrealized appreciation	\$ 2,141,925	\$ 3,970,314	\$ 9,222,769	\$ 624,302
Aggregate unrealized depreciation	(1,569,217)	(2,027,723)	(4,349,466)	(1,346,356)
Net unrealized appreciation (depreciation)	\$ 572,708	\$ 1,942,591	\$ 4,873,303	\$ (722,054)

#### 4. Dividend and Distribution Information

Income and long-term capital gain distributions are determined in accordance with federal income tax regulations, which may differ from U.S. generally accepted accounting principles. Additionally, net short-term gains on sales of investment securities are treated as ordinary income for federal income tax purposes. The tax character of dividends and distributions paid during the years ended March 31, 2008 and 2007 was as follows:

	Arizona	Colorado	Minnesota	National
	Municipal	Municipal	Municipal	Municipal
	Fund	Fund	Fund II	Fund _
Year Ended 3/31/08				
Ordinary Income	\$ 58,659	\$	\$ 32,679	\$ 60,768
Tax-exempt income	2,700,762	4,758,605	11,215,078	2,310,133
Long-term capital gain	232,318	913,220		142,452
Total	\$2,991,739	\$5,671,825	\$11,247,757	\$2,513,353
Year Ended 3/31/07				
Ordinary income	\$ 15,433	\$	\$	\$
Tax-exempt income	3,106,771	5,436,875	11,948,414	2,676,030
Long-term capital gain	134,934	435,594		208,722
Total	\$3.257.138	\$5.872.469	\$11.948.414	\$2.884.752

#### 5. Components of Net Assets on a Tax Basis

As of March 31, 2008, the components of net assets on a tax basis were as follows:

	Arizona Municipal	Colorado Municipal	Minnesota Municipal	National Municipal
	Fund	Fund	Fund II	Fund
Shares of beneficial interest	\$40,780,234	\$67,238,110	\$158,750,422	\$33,300,621
Distributions payable	(15,481)	(25,000)	(58,932)	(12,384)
Undistributed tax-exempt Income	B	62,773		
Post-October losses	(43,488)	(245,374)	(65,893)	(182,094)
Capital loss carryforward			(194,046)	(18,596)

Unrealized appreciation (depreciation) of investments	572,708	1,942,591	4,873,303	(722,054)
Net assets	\$41,293,973	\$68,973,100	\$163,304,854	\$32,365,493

The difference between book basis and tax basis components of net assets are primarily attributable to tax deferral of losses on wash sales and tax treatment of market discount on debt instruments.

Post-October losses represent losses realized on investment transactions from November 1, 2007 through March 31, 2008 that, in accordance with federal income tax regulations, the Funds have elected to defer and treat as having arisen in the following fiscal year.

33

## Notes to financial statements

**Delaware Investments Closed-End Municipal Bond Funds** 

#### 5. Components of Net Assets on a Tax Basis (continued)

For financial reporting purposes, capital accounts are adjusted to reflect the tax character of permanent book/tax differences. Reclassifications are primarily due to tax treatment of dividends and distributions, capital loss carryforward expiration and tax treatment of market discount on debt instruments. Results of operations and net assets were not affected by these reclassifications. For the year ended March 31, 2008, the Funds recorded the following reclassifications:

	Arizona Municipal	Colorado Municipal	Minnesota Municipal	National Municipal
	Fund	Fund	Fund II	Fund
Paid-in capital	\$ (58,659)	\$ 🗆	\$(47,067)	\$(60,768)
Undistributed net investment income	33,538	(769)	27,316	60,407
Accumulated net realized gain (loss)	25,121	769	19,751	361

For federal income tax purposes, capital loss carryforwards may be carried forward and applied against future capital gains. Capital loss carryforwards remaining at March 31, 2008 will expire as follows:

	Minnesota Municipal	National Municipal
	Fund II	Fund
2009	\$ 175,804	\$ □
2010	8,416_	
2013	9,826	
2016		18,596
Total	\$ 194,046	\$ 18,596

For the year ended March 31, 2008, the Minnesota Municipal Fund II utilized \$161,006 of capital loss carryforwards and \$14,388 expired in 2008.

#### 6. Capital Stock

Pursuant to their articles of incorporation, Arizona Municipal Fund, Colorado Municipal Fund and Minnesota Municipal Fund II each have 200 million shares of \$0.01 par value common shares authorized. National Municipal Fund has been authorized to issue an unlimited amount of \$0.01 par value common shares. The Funds did not repurchase any shares under the Share Repurchase Program during the year ended March 31, 2008. Shares issuable under the Funds□ dividend reinvestment plan are

purchased by the Funds∏ transfer agent, Mellon Investor Services, LLC, in the open market.

For the year ended March 31, 2008, the Funds did not have any transactions in common shares.

The Funds each have one million shares of \$0.01 par value preferred shares authorized, except for National Municipal Fund, which has an unlimited amount of \$0.01 par value preferred shared authorized. The Arizona Municipal Fund and National Municipal Fund each currently have 250 Series A and 250 Series B preferred shares issued. Colorado Municipal Fund has 400 Series A and 400 Series B preferred shares issued, and Minnesota Municipal Fund II has 600 Series A, 600 Series B, 400 Series C, and 300 Series D Preferred Shares issued. The preferred shares of each Fund have a liquidation preference of \$50,000 per share plus an amount equal to accumulated but unpaid dividends.

Dividends for the outstanding preferred shares of each Fund are cumulative at a rate established at the initial public offering and are reset based on the results of an auction. Prior to February 26, 2008, the dividends for outstanding preferred shares were reset every 28 days.

Dividend rates (adjusted for any capital gain distributions) ranged during the year ended March 31, 2008 as follows:

Fund	Low		High
Arizona Municipal Fund	3.23%	to	5.25%
Colorado Municipal Fund	3.10%	to	5.25%
Minnesota Municipal Fund II	3.04%	to	5.50%
National Municipal Fund	3.23%	to	5.15%

Citigroup Global Markets, Inc., and Merrill Lynch Pierce, Fenner & Smith Inc. (Colorado Municipal Fund only), as the remarketing agents, receive an annual fee from each of the Funds of 0.25% of the average amount of preferred stock outstanding.

Under the 1940 Act, the Funds may not declare dividends or make other distributions on common shares or purchase any such shares if, at the time of the declaration, distribution or purchase, asset coverage with respect to the outstanding preferred stock is less than 200%. The preferred shares are redeemable at the option of the Funds, in whole or in part, on any dividend payment date at \$50,000 per share plus any accumulated but unpaid dividends whether or not declared. The preferred shares are also subject to mandatory redemption at \$50,000 per share plus any accumulated but unpaid dividends whether or not declared, if certain requirements relating to the composition of the assets and liabilities of each Fund are not satisfied.

34

#### 6. Capital Stock (continued)

The holders of preferred shares have voting rights equal to the holders of common shares (one vote per share) and will vote together with holders of common shares as a single class. However, holders of preferred shares are also entitled to elect two of each Fund\[ \]s Directors. In addition, the 1940 Act requires that along with approval by shareholders that might otherwise be required, the approval of the holders of a majority of any outstanding preferred shares, voting separately as a class would be required to (a) adopt any plan of reorganization that would adversely affect the preferred shares, and (b) take any action requiring a vote of security holders pursuant to Section 13(a) of the 1940 Act, including, among other things, changes in each of the Fund\[ \]s subclassification as a closed-end investment company or (c) changes in their fundamental investment restrictions.

#### 7. Inverse Floaters

The Funds may participate in inverse floater programs where a fund transfers its own bonds to a trust that issues floating rate securities and inverse floating rate securities (inverse floaters) with an aggregate principal amount equal to the principal of the transferred bonds. The inverse floaters received by the Funds are derivative tax-exempt obligations with floating or variable interest rates that move in the opposite direction of short-term interest rates, usually at an accelerated speed. Consequently, the market values of the inverse floaters will generally be more volatile than other tax-exempt investments. The Funds typically use inverse floaters to adjust the duration of its portfolio. Duration measures a portfolio[s sensitivity to changes in interest rates. By holding inverse floaters with a different duration than the underlying bonds that a Fund transferred to the trust, the Fund seeks to adjust its portfolio[s sensitivity to changes in interest rates. The Funds may also invest in inverse floaters to add additional income to the Funds or to adjust the Funds[] exposure to a specific segment of the yield curve. Securities held in trust relating to inverse floater programs are identified on the statements of net assets.

#### 8. Credit and Market Risk

The Funds use leverage in the form of preferred shares. Leveraging may result in a higher degree of volatility because each Fund[s net asset value could be more sensitive to fluctuations in short-term interest rates and changes in market value of portfolio securities attributable to the leverage.

The Funds concentrate their investments in securities issued by municipalities. The value of these investments may be adversely affected by new legislation within the states, regional or local and national economic conditions, as applicable, and differing levels of supply and demand for municipal bonds. Many municipalities insure repayment for their obligations. A real or perceived decline in creditworthiness of a bond insurer can have an adverse impact on the value of insured bonds held in the Funds. At March 31, 2008, the percentages of each Fund[]s net assets, including liquidation value of preferred stock, insured by bond insurers are as follows:

Arizona Municipal Fund 38%
Colorado Municipal Fund 56%
Minnesota Municipal Fund 28%
National Municipal Fund 79%

Although bond insurance reduces the risk of loss due to default by an issuer, such bonds remain subject to the risk that value may fluctuate for other reasons and there is no assurance that the insurance company will meet its obligations. These securities have been identified in the statements of net assets.

The Funds may invest in advanced refunded bonds, escrow secured bonds or defeased bonds. Under current federal tax laws and regulations, state and local government borrowers are permitted to refinance outstanding bonds by issuing new bonds. The issuer refinances the outstanding debt to either reduce interest costs or to remove or alter restrictive covenants imposed by the bonds being refinanced. A refunding transaction where the municipal securities are being refunded within 90 days from the issuance of the refunding issue is known as a [current refunding.] [Advance refunded bonds] are bonds in which the refunded bond issue remains outstanding for more than 90 days following the issuance of the refunding issue. In an advance refunding, the issuer will use the proceeds of a new bond issue to purchase high grade interest bearing debt securities which are then deposited in an irrevocable escrow account held by an escrow agent to secure all future payments of principal and interest and bond premium of the advance refunded bond. Bonds are [escrowed to maturity] when the proceeds of the refunding issue are deposited in an escrow account for investment sufficient to pay all of the principal and interest on the original interest payment and maturity dates.

Bonds are considered pre-refunded when the refunding issues proceeds are escrowed only until a permitted call date or dates on the refunded issue with the refunded issue being redeemed at the time, including any required premium. Bonds become defeased when the rights and interests of the bondholders and of their lien on the pledged revenues or other security under the terms of the bond contract are substituted with an alternative source of revenues (the escrow securities) sufficient to meet payments of principal and interest to maturity or to the first call dates. Escrowed secured bonds will often receive a rating of AAA from Moody Is Investors Service, Inc., Standard & Poor Ratings Group, and/or Fitch Ratings due to the strong credit quality of the escrow securities and the irrevocable nature of the escrow deposit agreement.

(continues)

35

## Notes to financial statements

**Delaware Investments Closed-End Municipal Bond Funds** 

#### 8. Credit and Market Risk (continued)

Each Fund may invest up to 15% of its net assets in illiquid securities, which may include securities with contractual restrictions on resale, securities exempt from registration under Rule 144A of the Securities Act of 1933, as amended, and other securities which may not be readily marketable. The relative illiquidity of these securities may impair each Fund from disposing of them in a timely manner and at a fair price when it is necessary or desirable to do so. While maintaining oversight, each Fund Board of Trustees/Directors has delegated to DMC the day-to-day functions of determining whether individual securities are liquid for purposes of each Fund Is limitation on investments in illiquid assets. Securities eligible for resale pursuant to Rule 144A, which are determined to be liquid, are not subject to the Funds 15% limit on investments in illiquid securities. As of March 31, 2008, there were no Rule 144A securities and no securities have been determined to be illiquid under the Funds Liquidity Procedures.

#### 9. Contractual Obligations

The Funds enter into contracts in the normal course of business that contain a variety of indemnifications. The Funds maximum exposure under these arrangements is unknown. However, the Funds have not had prior claims or losses pursuant to these contracts. Management has reviewed the Funds existing contracts and expects the risk of loss to be remote.

#### 10. Tax Information (Unaudited)

The information set forth below is for the Funds fiscal year as required by federal income tax laws. Shareholders, however, must report distributions on a calendar year basis for income tax purposes, which may include distributions for portions of two fiscal years of a fund. Accordingly, the information needed by shareholders for income tax purposes will be sent to them in January of each year. Please consult your tax advisor for proper treatment of this information.

For the fiscal year ended March 31, 2008, each Fund designates distributions paid during the year as follows:

	(A)	(B)	(C)	
	Long-Term Capital	Tax-	Ordinary	
	Gains	Exempt	Income	Total
	Distributions	Distributions	Distributions (Tax	Distributions
	(Tax Basis)	(Tax Basis)	Basis)	(Tax Basis)
Arizona Municipal Fund	8%	90%	2%	100%
Colorado Municipal Fund	16%	84%		100%
Minnesota Municipal Fund II		100%		100%
National Municipal Fund	6%	92%	2%	100%

(A), (B) and (C) are based on a percentage of each Fund stotal distributions.

#### 11. Preferred Shares

Beginning in February 2008, remarketings of each Fund shares failed. A remarketing fails when the remarketing agent is unable to set a dividend rate that will clear the market of all the shares that current holders wish to sell in a remarketing. A failed remarketing means that the current holders retain their preferred shares until the next periodic remarketing (for the Funds, periodic remarketings are typically 28 days but are generally 7 days when a remarketing fails), and the dividend rate for the next dividend period is automatically set to the maximum dividend rate established by each Fund so governing instruments. Each Fund preferred shares maximum rate is calculated as 110% of the higher applicable AA composite commercial paper rate and the taxable equivalent of the short-term municipal bond rate.

These developments generally do not affect the management or investment policies of the Funds. However, one implication of these failed remarketings for common shareholders is that the Funds cost of leverage may be higher than it otherwise would have been had the remarketing continued to be successful. If this is the case, the Funds future common share earnings may be lower than they otherwise would have been.

36

# Report of independent registered public accounting firm

The Shareholders and Board of Directors/Trustees of Delaware Investments Arizona Municipal Income Fund, Inc. Delaware Investments Colorado Municipal Income Fund, Inc.

Delaware Investments Minnesota Municipal Income Fund II, Inc.

Delaware Investments National Municipal Income Fund

We have audited the accompanying statements of net assets of Delaware Investments Arizona Municipal Income Fund, Inc., Delaware Investments Colorado Municipal Income Fund, Inc., Delaware Investments Minnesota Municipal Income Fund II, Inc., and Delaware Investments National Municipal Income Fund (the | Funds |) as of March 31, 2008, and the related statements of operations for the year then ended, the statements of changes in net assets for each of the two years in the period then ended, and the financial highlights for each of the five years in the period then ended. These financial statements and financial highlights are the responsibility of the Funds management. Our responsibility is to express an opinion on these financial statements and financial highlights based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements and financial highlights are free of material misstatement. We were not engaged to perform an audit of the Funds internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Funds internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements and financial highlights, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our procedures included confirmation of securities owned as of March 31, 2008, by correspondence with the custodian and brokers, or by other appropriate auditing procedures where replies from brokers were not received. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements and financial highlights referred to above present fairly, in all material respects, the financial position of each of the respective Funds at March 31, 2008, the results of their operations for the year then ended, the changes in their net assets for each of the two years in the period then ended, and their financial highlights for each of the five years in the period then ended, in conformity with U.S. generally accepted accounting principles.

Philadelphia, Pennsylvania May 19, 2008

37

## Other Fund information (unaudited)

#### **Delaware Investments Closed-End Municipal Bond Funds**

#### **Fund management**

Joseph R. Baxter Senior Vice President, Head of Municipal Bond Department, Senior Portfolio Manager

Joseph R. Baxter is the head of the municipal bond department and is responsible for setting the department investment strategy. He is also a co-portfolio manager of the firm municipal bond funds and several client accounts. Before joining Delaware Investments in 1999, he held investment positions with First Union, most recently as a municipal portfolio manager with the Evergreen Funds. Baxter received a bachelor degree in finance and marketing from La Salle University.

Robert F. Collins, CFA Senior Vice President, Senior Portfolio Manager

Robert F. Collins is a member of the firm smunicipal fixed income portfolio management team with primary responsibility for portfolio construction and strategic asset allocation. He is a co-portfolio manager of several of the firm smunicipal bond funds and client accounts. Prior to joining Delaware Investments in 2004, he spent five years as a co-manager of the municipal portfolio management group within PNC Advisors, where he oversaw the tax-exempt investments of high net worth and institutional accounts. Before that, he headed the municipal fixed income team at Wilmington Trust, where he managed funds and high net worth accounts. Collins earned a bachelor degree in economics from Ursinus College, and he is also a former president of The Financial Analysts of Wilmington, Delaware.

Stephen J. Czepiel Senior Vice President, Portfolio Manager

Stephen J. Czepiel is a member of the firm smunicipal fixed income portfolio management team with primary responsibility for portfolio construction and strategic asset allocation. He is a co-portfolio manager of the firm smunicipal bond funds and client accounts. He joined Delaware Investments in July 2004 as a senior bond trader. Previously, he was vice president at both Mesirow Financial and Loop Capital Markets. He began his career in the securities industry in 1982 as a municipal bond trader at Kidder Peabody and now has more than 20 years of experience in the municipal securities industry. Czepiel earned his bachelor degree in finance and economics from Duquesne University.

Denise A. Franchetti, CFA Vice President, Portfolio Manager, Senior Research Analyst

Denise A. Franchetti is a senior research analyst for the municipal bond department. Currently, she is responsible for following the airports/airlines, education, hotels, leases, turnpike/toll, and transportation sectors for the group. In 2003, she was also named as portfolio manager on several of the tax-exempt funds in addition to her research duties. Prior to joining Delaware Investments in 1997, she was a fixed income trader at Provident Mutual Life Insurance and an investment analyst at General Accident Insurance. Franchetti received her bachelor degree and an MBA from La Salle University, and she is a member of the CFA Society of Philadelphia.

38

#### **Recent Developments Regarding Bond Insurance Companies**

Starting in January 2008, Standard and Poors, Moodys Investors Service and Fitch Ratings began to take negative actions against a number of the municipal bond insurers. These actions included actual rating downgrades, assigning negative outlooks, and/or placing the insurer financial strength rating on credit watch for possible downgrade. Through early April 2008, five (AMBAC, FGIC, CGIC, MBIA and XLCA) of the seven first tier monoline insurers have been downgraded by one or more of the rating agencies. A real or perceived decline in creditworthiness of a bond insurer can have an adverse impact on the value of insured bonds held in the Funds.

#### Recent Developments Regarding Preferred Share Remarketings

Beginning in February 2008, remarketings of each Fund\shares failed. A remarketing fails when the remarketing agent is unable to set a dividend rate that will clear the market of all the shares that current holders wish to sell in a remarketing. A failed remarketing means that the current holders retain their preferred shares until the next periodic remarketing (for the Funds, periodic remarketings are typically 28 days but are generally 7 days when a remarketing fails), and the dividend rate for the next dividend period is automatically set to the maximum dividend rate established by each Fund\shares governing instruments. The preferred shares maximum rate is calculated as 110% of the higher applicable AA composite commercial paper rate and the taxable equivalent of the short-term municipal bond rate.

These developments generally do not affect the management or investment policies of the Funds. However, one implication of these failed remarketings for common shareholders is that the Funds cost of leverage may be higher than it otherwise would have been had the remarketing continued to be successful. If this is the case, the Funds future common share earnings may be lower than they otherwise would have been.

Delaware Investments is vigorously exploring viable methods to restore liquidity to preferred shareholders while carefully weighing the potential benefits and consequences of any action on both preferred and common shareholders. We continue to consult with the Funds distribution partners, banking firms, and applicable regulatory authorities, including the SEC, as part of our efforts to address this matter.

#### Change to the Funds Investment Policies

At a meeting of the Funds Board of Directors/Trustees on August 16, 2007, the Board approved the Funds ability to invest up to 15% of total net assets in credit default swaps.

#### **Credit Default Swaps**

A Fund may enter into credit default swap ([CDS[]) contracts to the extent consistent with its investment objectives and strategies. A CDS contract is a risk-transfer instrument (in the form of a derivative security) through which one party (the [purchaser of protection[]) transfers to another party (the [seller of protection[]) the financial risk of a Credit Event (as defined below), as it relates to a particular reference security or basket of securities (such as an index). In exchange for the protection offered by the seller of protection, the purchaser of protection agrees to pay the seller of protection a periodic premium. In the most general sense, the benefit for the purchaser of protection is that, if a Credit Event should occur, it has an agreement that the seller of protection will make it whole in return for the transfer to the seller of protection of the reference security or securities. The benefit for the seller of protection is the premium income it receives. A Fund might use CDS contracts to limit or to reduce the risk exposure of the Fund to defaults of the issuer or issuers of its holdings (i.e., to reduce risk when the Fund owns or has exposure to such securities). A Fund also might use CDS contracts to create or vary exposure to securities or markets or as a tax management tool.

CDS transactions may involve general market, illiquidity, counterparty, and credit risks. CDS prices may also be subject to rapid movements in response to news and events affecting the underlying securities. In addition, the CDS market for municipal securities is less mature than the CDS market for taxable fixed income securities. The aggregate notional amount (typically, the principal amount of the reference security or securities) of a Fund investments in the CDS contracts will be limited to 15% of its total net assets. As the purchaser or seller of protection, a Fund may be required to segregate cash or other liquid assets to cover its obligations under certain CDS contracts.

Where a Fund is a purchaser of protection, it will designate on its books and records cash or liquid securities sufficient to cover its premium payments under the CDS. To the extent that a Fund, as a purchaser of protection, may be required in the event of a credit default to deliver to the counterparty (1) the reference security (or basket of securities), (2) a security (or basket of securities) deemed to be the equivalent of the reference security (or basket of securities), or (3) the negotiated monetary value of the obligation, the Fund will designate the reference security (or basket of securities) on its books and records as being held to satisfy its obligation under the CDS or, where the Fund does not own the reference security (or basket of securities), the Fund will designate on its books and records cash or liquid securities sufficient to satisfy the potential obligation. To the extent that the Fund, as a seller of protection, may be required in the event of a credit default to deliver to the counterparty some or all of the notional amount of the CDS, it will designate on its books and records cash or liquid securities sufficient to cover the obligation. If the CDS permits a Fund to offset its obligations against the obligations of the counterparty under the CDS, then the Fund will only designate on its books and records cash or liquid securities sufficient to cover the Fund securities net obligation to the counterparty, if any. All cash and liquid securities designated by a Fund to cover its obligations under CDS will be marked to market daily to cover these obligations.

## Other Fund information (unaudited)

**Delaware Investments Closed-End Municipal Bond Funds** 

As the seller of protection in a CDS contract, a Fund would be required to pay the par (or other agreed-upon) value of a reference security (or basket of securities) to the counterparty in the event of a default, bankruptcy, failure to pay, obligation acceleration, modified restructuring or agreed upon event (each of these events is a ||Credit Event||). If a Credit Event occurs, a Fund generally would receive the security or securities to which the Credit Event relates in return for the payment to the purchaser of the par value. Provided that no Credit Event occurs, a Fund would receive from the counterparty a periodic stream of payments over the term of the contract in return for this credit protection. In addition, if no Credit Event occurs during the term of the CDS contract, a Fund would have no delivery requirement or payment obligation to the purchaser of protection. As the seller of protection, a Fund would have credit exposure to the reference security (or basket o
