2.3 Review of operating results

In the first quarter of 2019, the global economy experienced weak growth momentum while China's economy maintained stable growth with gross domestic product (GDP) up by 6.4%. International oil prices recovered from low level at the end of last year, domestic refined oil products prices were adjusted in a timely manner. Domestic demand for natural gas grew rapidly with apparent consumption up by 11%. Refined oil products market, with ample supply, witnessed strong competition. Demand for chemicals increased steadily.

Adhering to the general principle of making progress while maintaining stability and the requirements for high-quality development, we will accelerate the strategic plan of our phased goals for year 2020 through year 2050. Guided by "reform, management, innovation and development", we stick to the operating principles of "specialised development, market-based operation, international layout and overall coordination" and make great efforts in optimising operation, expanding market, reducing costs, controlling risks, deepening reform and reinforcing management.

In accordance with CASs, net profit attributable to equity shareholders of the Company was RMB 14.763 billion in the first quarter, down by 21.3% over the same period of last year. In accordance with IFRS, net profit attributable to equity shareholders of the Company was RMB 15.468 billion, down by 19.9% compared with the same period of last year.

Exploration and Production: With the recovery of oil price, the Company fully implemented the action plan of redoubling efforts in oil and gas exploration and production. Measures were taken to accelerate the formation of an integrated value chain of natural gas business including production, supply, storage and marketing and continuously reduce cost and expenditure on all fronts. Tangible results were achieved in maintaining oil production and increasing gas output. In exploration, we reinforced preliminary exploration in new areas and strengthened integrated detailed evaluation in mature fields, which led to new discoveries in Jiyang Depression and Sichuan basins. In crude oil development, we made a full-fledged push to build profitable production capacity, deepen the structural adjustment of mature fields, reduce natural decline rate and ensure steady production. In natural gas development, we constantly pushed forward capacity building in Hangjinqi of Neimongol, west Sichuan Depression and Weirong gas fields. We accelerated construction of natural gas production, supply, storage and marketing system and promoted a coordinated growth along the value chain.

In the first quarter, the oil and gas production of the Company was 113.46 million barrels of oil equivalent, up by 1.9% over the same period of last year, among which domestic crude oil increased by 0.2% while natural gas increased by 6.7%, compared with the same period of last year. 4.3 Differences between Consolidated Financial Statements prepared in accordance with the accounting policies complying with CASs and IFRS (unaudited)

Other than the differences in the classifications of certain financial statements captions and the accounting for the items described below, there are no material differences between the Group's consolidated financial statements prepared in accordance with the accounting policies complying with CASs and IFRS. The reconciliation presented below is included as supplemental information, is not required as part of the basic financial statements and does not include differences related to classification, presentation or disclosures. Such information has not been subject to independent audit or review. The major differences are:

(i) Government Grants

Under CASs, grants from the government are credited to capital reserve if required by relevant governmental regulations. Under IFRS, government grants relating to the purchase of fixed assets are recognised as deferred income and are transferred to the income statement over the useful life of these assets.

(ii) Safety Production Fund

Under CASs, safety production fund should be recognised in profit or loss with a corresponding increase in reserve according to PRC regulations. Such reserve is reduced for expenses incurred for safety production purposes or, when safety production related fixed assets are purchased, is reduced by the purchased cost with a corresponding increase in the accumulated depreciation. Such fixed assets are not depreciated thereafter. Under IFRS, payments are expensed as incurred, or capitalised as fixed assets and depreciated according to applicable depreciation methods.

Effects of major differences between the net profit under CASs and the profit for the period under IFRS are analysed as follows:
