Form 424B2
September 04, 2018

Filed Pursuant to Rule 424(b)(2)

File No. 333-221324

Title of Each Class of Securities Offered	Maximum Aggregate Offering Price	Amount of Registration Fee⁽¹⁾
Medium-Term Notes, Series S, Principal at Risk Securities Linked to the Lowest Performing of the S&P 500 [®] Index, the Russell 2000 [®] Index and the EURO STOXX 50 [®] Index due August 29, 2022	\$315,000	\$39.22

⁽¹⁾ The total filing fee of \$39.22 is calculated in accordance with Rule 457(r) of the Securities Act of 1933 (the "Securities Act") and will be paid by wire transfer within the time required by Rule 456(b) of the Securities Act.

PRICING SUPPLEMENT No. 95 dated August 30, 2018

(To Market Measure Supplement dated May 18, 2018,

Prospectus Supplement dated January 24, 2018

and Prospectus dated April 27, 2018)

Wells Fargo & Company

Medium-Term Notes, Series S

Equity Index Linked Securities

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500[®] Index, the Russell 2000[®] Index and the EURO STOXX 50[®] Index due August 29, 2022

Linked to the **lowest performing** of the S&P 500[®] Index, the Russell 2000[®] Index and the EURO STOXX 50[®] Index (each referred to as an “Index”)

Unlike ordinary debt securities, the securities do not provide for fixed payments of interest, do not repay a fixed amount of principal at stated maturity and are subject to potential automatic call prior to stated maturity upon the terms described below. Whether the securities pay a contingent coupon, whether the securities are automatically called prior to stated maturity and, if they are not automatically called, whether you are repaid the original offering price of your securities at stated maturity will depend in each case on the closing level of the lowest performing Index on the relevant calculation day. The lowest performing Index on any calculation day is the Index that has the lowest closing level on that calculation day as a percentage of its starting level

Contingent Coupon. The securities will pay a contingent coupon on a quarterly basis until the earlier of stated maturity or automatic call if, **and only if**, the closing level of the lowest performing Index on the calculation day for that quarter is greater than or equal to its threshold level. However, if the closing level of the lowest performing Index on a calculation day is less than its threshold level, you will not receive any contingent coupon for the relevant quarter. If the closing level of the lowest performing Index is less than its threshold level on every calculation day, you will not receive any contingent coupons throughout the entire term of the securities. The contingent coupon rate is 6.00% per annum

Automatic Call. If the closing level of the lowest performing Index on any of the quarterly calculation days from February 2019 to May 2022, inclusive, is greater than or equal to its starting level, we will automatically call the securities for the original offering price plus a final contingent coupon payment

Potential Loss of Principal. If the securities are not automatically called prior to stated maturity, you will receive the original offering price at stated maturity if, **and only if**, the closing level of the lowest performing Index on the final calculation day is greater than or equal to its threshold level. If the closing level of the lowest performing Index on the final calculation day is less than its threshold level, you will lose more than 35%, and possibly all, of the original offering price of your securities

The threshold level for each Index is equal to 65% of its starting level

If the securities are not automatically called prior to stated maturity, you will have full downside exposure to the lowest performing Index from its starting level if its closing level on the final calculation day is less than its threshold

level, but you will not participate in any appreciation of any Index and will not receive any dividends on securities included in any Index

Your return on the securities will depend **solely** on the performance of the Index that is the lowest performing Index on each calculation day. You will not benefit in any way from the performance of the better performing Indices. Therefore, you will be adversely affected if **any Index** performs poorly, even if the other Indices perform favorably

All payments on the securities are subject to the credit risk of Wells Fargo & Company, and you will have no ability to pursue any securities included in any Index for payment; if Wells Fargo & Company defaults on its obligations, you could lose some or all of your investment

No exchange listing; designed to be held to maturity

On the date of this pricing supplement, the estimated value of the securities is \$949.13 per security. The estimated value of the securities was determined for us by Wells Fargo Securities, LLC using its proprietary pricing models. It is not an indication of actual profit to us or to Wells Fargo Securities, LLC or any of our other affiliates, nor is it an indication of the price, if any, at which Wells Fargo Securities, LLC or any other person may be willing to buy the securities from you at any time after issuance. See “Investment Description” in this pricing supplement.

The securities have complex features and investing in the securities involves risks not associated with an investment in conventional debt securities. See “Risk Factors” herein on page PRS-12.

The securities are unsecured obligations of Wells Fargo & Company, and all payments on the securities are subject to the credit risk of Wells Fargo & Company. If Wells Fargo & Company defaults on its obligations, you could lose some or all of your investment. The securities are not deposits or other obligations of a depository institution and are not insured by the Federal Deposit Insurance Corporation, the Deposit Insurance Fund or any other governmental agency of the United States or any other jurisdiction.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this pricing supplement or the accompanying market measure supplement, prospectus supplement and prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

Original Offering Price Agent Discount⁽¹⁾ Proceeds to Wells Fargo

Per Security	\$1,000.00	\$15.75	\$984.25
Total	\$315,000.00	\$4,961.25	\$310,038.75

Wells Fargo Securities, LLC, a wholly owned subsidiary of Wells Fargo & Company, is the agent for the ⁽¹⁾distribution of the securities and is acting as principal. See “Investment Description” in this pricing supplement for further information.

Wells Fargo Securities

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500[®] Index, the Russell 2000[®] Index and the EURO STOXX 50[®] Index due August 29, 2022

Terms of the Securities

Issuer:	Wells Fargo & Company (“ <u>Wells Fargo</u> ”).
Market Measures:	The S&P 500 [®] Index, the Russell 2000 [®] Index and the EURO STOXX 50 [®] Index (each referred to as an “ <u>Index</u> ,” and collectively as the “ <u>Indices</u> ”).
Pricing Date:	August 30, 2018.
Issue Date:	September 5, 2018. (T+3)
Original Offering Price:	\$1,000 per security. References in this pricing supplement to a “ <u>security</u> ” are to a security with a face amount of \$1,000.
Contingent Coupon Payment:	On each contingent coupon payment date, you will receive a contingent coupon payment at a per annum rate equal to the contingent coupon rate if, and only if , the closing level of the

lowest performing Index on the related calculation day is greater than or equal to its threshold level.

If the closing level of the lowest performing Index on any calculation day is less than its threshold level, you will not receive any contingent coupon payment on the related contingent coupon payment date. If the closing level of the lowest performing Index is less than its threshold level on all quarterly calculation days, you will not receive any contingent coupon payments over the term of the securities.

Each quarterly contingent

coupon
payment, if
any, will be
calculated per
security as
follows:
 $\$1,000 \times$
contingent
coupon rate \times
(90/360). Any
contingent
coupon
payments will
be rounded to
the nearest
cent, with
one-half cent
rounded
upward.

Contingent Coupon Payment Dates: Quarterly, on
the third
business day
following each
calculation day
(as each such
calculation day
may be
postponed
pursuant to
“—Postponement
of a
Calculation
Day” below, if
applicable),
provided that
the contingent
coupon
payment date
with respect to
the final
calculation day
will be the
stated maturity
date. If a
calculation day
is postponed
with respect to
one or more
Indices, the
related
contingent

**Contingent
Coupon Rate:**

coupon
payment date
will be three
business days
after the last
calculation day
as postponed.
The "contingent
coupon rate" is
6.00% per
annum

**Automatic
Call:**

If the closing
level of the
lowest
performing
Index on any
of the
quarterly
calculation
days from
February 2019
to May 2022,
inclusive, is
greater than or
equal to its
starting level,
the securities
will be
automatically
called, and on
the related call
settlement date
you will be
entitled to
receive a cash
payment per
security in
U.S. dollars
equal to the
original
offering price
per security
plus a final
contingent
coupon
payment. The
securities will
not be subject
to automatic
call until the
second

quarterly
calculation
day, which is
approximately
six months
after the issue
date.

If the
securities are
automatically
called, they
will cease to
be outstanding
on the related
call settlement
date and you
will have no
further rights
under the
securities after
such call
settlement
date. You will
not receive any
notice from us
if the securities
are
automatically
called.

**Calculation
Days:**

Quarterly, on
the 24th day of
each February,
May, August
and
November,
commencing
November
2018 and
ending May
2022, and the
final
calculation
day, each
subject to
postponement
as described
below under
“—Postponement
of a
Calculation

**Call
Settlement
Date:**

Day.” We refer to August 24, 2022 as the “final calculation day.” Three business days after the applicable calculation day (as such calculation day may be postponed pursuant to “—Postponement of a Calculation Day” below, if applicable). If a calculation day is postponed with respect to one or more Indices, the related call settlement date will be three business days after the last calculation day as postponed. August 29, 2022. If the final calculation day is postponed, the stated maturity date will be the later of (i) August 29, 2022 and (ii) three business days after the last final calculation day as postponed. See “—Postponement

**Stated Maturity
Date:**

of a
Calculation
Day” below. If
the stated
maturity date
is not a
business day,
the payment to
be made on the
stated maturity
date will be
made on the
next
succeeding
business day
with the same
force and
effect as if it
had been made
on the stated
maturity
date. The
securities are
not subject to
repayment at
the option of
any holder of
the securities
prior to the
stated maturity
date.

PRS-2

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500® Index, the Russell 2000® Index and the EURO STOXX 50® Index due August 29, 2022

Maturity If the securities are
Payment not automatically
Amount: called prior to the
stated maturity date,
you will be entitled
to receive on the
stated maturity date a
cash payment per
security in U.S.
dollars equal to the
maturity payment
amount (in addition
to the final
contingent coupon
payment, if any).
The “maturity
payment amount” per
security will equal:

- if the ending level of
the lowest
performing Index on
the final calculation
day is greater than or
equal to its threshold
level: \$1,000; or

- if the ending level of
the lowest
performing Index on
the final calculation
day is less than its
threshold level:
 $\$1,000 \times$
performance factor
of the lowest
performing Index on
the final calculation
day

**If the securities are
not automatically
called prior to
stated maturity and
the ending level of
the lowest
performing Index
on the final**

calculation day is less than its threshold level, you will lose more than 35%, and possibly all, of the original offering price of your securities at stated maturity.

Any return on the securities will be limited to the sum of your contingent coupon payments, if any. You will not participate in any appreciation of any Index, but you will have full downside exposure to the lowest performing Index on the final calculation day if the ending level of that Index is less than its threshold level.

All calculations with respect to the maturity payment amount will be rounded to the nearest one hundred-thousandth, with five one-millionths rounded upward (e.g., 0.000005 would be rounded to 0.00001); and the maturity payment amount will be rounded to the nearest cent, with one-half cent rounded upward.

Lowest Performing Index:

For any calculation day, the "lowest performing Index"

will be the Index with the lowest performance factor on that calculation day (as such calculation day may be postponed for one or more Indices pursuant to “—Postponement of a Calculation Day” below, if applicable).

Performance Factor:

With respect to an Index on any calculation day, its closing level on such calculation day *divided by* its starting level (expressed as a percentage).

Closing Level:

With respect to each Index, the “closing level” of that Index on any trading day means the official closing level of that Index reported by the relevant index sponsor on such trading day, as obtained by the calculation agent on such trading day from the licensed third-party market data vendor contracted by the calculation agent at such time; in particular, taking into account the decimal precision and/or rounding convention employed by such licensed third-party market data vendor on such date. Currently, the calculation agent obtains market data

from Thomson Reuters Ltd., but the calculation agent may change its market data vendor at any time without notice. The foregoing provisions of this definition of “closing level” are subject to the provisions set forth below under “Additional Terms of the Securities—Market Disruption Events,” “—Adjustments to an Index” and “—Discontinuance of an Index.”

With respect to the S&P 500 Index: 2901.13, its closing level on the pricing date.

Starting Level: With respect to the Russell 2000 Index: 1732.354, its closing level on the pricing date.

With respect to the EURO STOXX 50 Index: 3430.99, its closing level on the pricing date.

Ending Level: The “ending level” of an Index will be its closing level on the final calculation day.

Threshold Level: With respect to the S&P 500 Index: 1885.7345, which is equal to 65% of its starting level.

With respect to the Russell 2000 Index: 1126.0301, which is equal to 65% of its

starting level.

With respect to the EURO STOXX 50 Index: 2230.1435, which is equal to 65% of its starting level.

If any calculation day is not a trading day with respect to any Index, such calculation day for each Index will be postponed to the next succeeding day that is a trading day with respect to each Index. A calculation day for an Index is also subject to postponement due to the occurrence of a market disruption event with respect to such Index on such calculation day. See “Additional Terms of the Securities—Market Disruption Events.”

Postponement of a Calculation Day:

Calculation Agent:

Wells Fargo Securities, LLC
The securities will not be listed on any securities exchange or automated quotation system.

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500® Index, the Russell 2000® Index and the EURO STOXX 50® Index due August 29, 2022

Investment Description

The Principal at Risk Securities Linked to the Lowest Performing of the S&P 500® Index, the Russell 2000® Index and the EURO STOXX 50® Index due August 29, 2022 (the “securities”) are senior unsecured debt securities of Wells Fargo that do not provide for fixed payments of interest, do not repay a fixed amount of principal at stated maturity and are subject to potential automatic call upon the terms described in this pricing supplement. Whether the securities pay a quarterly contingent coupon, whether the securities are automatically called prior to stated maturity and, if they are not automatically called, whether you are repaid the original offering price of your securities at stated maturity will depend in each case upon the closing level of the **lowest performing Index** on the relevant calculation day. The lowest performing Index on any calculation day is the Index that has the lowest closing level on that calculation day as a percentage of its starting level. The securities provide:

- quarterly contingent coupon payments at a rate of 6.00% per annum until the earlier of stated maturity or automatic (i) call if, **and only if**, the closing level of the lowest performing Index on the applicable quarterly calculation day is greater than or equal to 65% of its starting level;
- the possibility of an automatic early call of the securities for an amount equal to the original offering price plus a (ii) final contingent coupon payment if the closing level of the lowest performing Index on any of the quarterly calculation days from February 2019 to May 2022, inclusive, is greater than or equal to its starting level; and
- (iii) if the securities are not automatically called prior to stated maturity:
 - (a) repayment of the original offering price if, **and only if**, the closing level of the lowest performing Index on the final calculation day has not declined by more than 35% from its starting level; and
 - (b) full exposure to the decline in the level of the lowest performing Index on the final calculation day from its starting level if the lowest performing Index has declined by more than 35% from its starting level.

If the closing level of the lowest performing Index on any quarterly calculation day is less than 65% of its starting level, you will not receive any contingent coupon payment for that quarter. If the securities are not automatically called prior to stated maturity and the closing level of the lowest performing Index on the final calculation day has declined by more than 35% from its starting level, you will lose more than 35%, and possibly all, of the original offering price of your securities at stated maturity. Accordingly, you will not receive any protection if the closing level of the lowest performing Index on the final calculation day has declined by more than 35% from its starting level.

Any return on the securities will be limited to the sum of your contingent coupon payments, if any. You will not participate in any appreciation of any Index, but you will be fully exposed to the decline in the lowest performing Index on the final calculation day if the securities are not automatically called prior to stated maturity and the closing level of the lowest performing Index on the final calculation day has declined by more than 35% from its starting level.

All payments on the securities are subject to the credit risk of Wells Fargo.

Your return on the securities will depend solely on the performance of the Index that is the lowest performing Index on each calculation day. You will not benefit in any way from the performance of the better performing Indices. Therefore, you will be adversely affected if any Index performs poorly, even if the other Indices perform favorably.

The securities are riskier than alternative investments linked to only one of the Indices or linked to a basket composed of each Index. Unlike those alternative investments, the securities will be subject to the full risks of

each Index, with no offsetting benefit from the better performing Indices. The securities are designed for investors who understand and are willing to bear this additional risk in exchange for the potential contingent coupon payments that the securities offer. Because the securities may be adversely affected by poor performance by any Index, you should not invest in the securities unless you understand and are willing to accept the full downside risks of each Index.

PRS-5

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500[®] Index, the Russell 2000[®] Index and the EURO STOXX 50[®] Index due August 29, 2022

The S&P 500[®] Index is an equity index that is intended to provide an indication of the pattern of common stock price movement in the large capitalization segment of the United States equity market.

The Russell 2000[®] Index is an equity index that is designed to reflect the performance of the small capitalization segment of the United States equity market.

The EURO STOXX 50[®] Index is an equity index that is composed of 50 component stocks of sector leaders in 11 Eurozone countries and is intended to provide an indication of the pattern of common stock price movement in the Eurozone.

PRS-6

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500® Index, the Russell 2000® Index and the EURO STOXX 50® Index due August 29, 2022

The original offering price of each security of \$1,000 includes certain costs that are borne by you. Because of these costs, the estimated value of the securities on the pricing date is less than the original offering price. The costs included in the original offering price relate to selling, structuring, hedging and issuing the securities, as well as to our funding considerations for debt of this type.

The costs related to selling, structuring, hedging and issuing the securities include (i) the agent discount (if any), (ii) the projected profit that our hedge counterparty (which may be one of our affiliates) expects to realize for assuming risks inherent in hedging our obligations under the securities and (iii) hedging and other costs relating to the offering of the securities.

Our funding considerations take into account the higher issuance, operational and ongoing management costs of market-linked debt such as the securities as compared to our conventional debt of the same maturity, as well as our liquidity needs and preferences. Our funding considerations are reflected in the fact that we determine the economic terms of the securities based on an assumed funding rate that is generally lower than the interest rates implied by secondary market prices for our debt obligations and/or by other traded instruments referencing our debt obligations, which we refer to as our “secondary market rates.” As discussed below, our secondary market rates are used in determining the estimated value of the securities.

If the costs relating to selling, structuring, hedging and issuing the securities were lower, or if the assumed funding rate we use to determine the economic terms of the securities were higher, the economic terms of the securities would be more favorable to you and the estimated value would be higher. The estimated value of the securities as of the pricing date is set forth on the cover page of this pricing supplement.

Determining the estimated value

Our affiliate, Wells Fargo Securities, LLC (“WFS”), calculated the estimated value of the securities set forth on the cover page of this pricing supplement based on its proprietary pricing models. Based on these pricing models and related market inputs and assumptions referred to in this section below, WFS determined an estimated value for the securities by estimating the value of the combination of hypothetical financial instruments that would replicate the payout on the securities, which combination consists of a non-interest bearing, fixed-income bond (the “debt component”) and one or more derivative instruments underlying the economic terms of the securities (the “derivative component”).

The estimated value of the debt component is based on a reference interest rate, determined by WFS as of a recent date, that generally tracks our secondary market rates. Because WFS does not continuously calculate our reference interest rate, the reference interest rate used in the calculation of the estimated value of the debt component may be higher or lower than our secondary market rates at the time of that calculation. As noted above, we determine the economic terms of the securities based upon an assumed funding rate that is generally lower than our secondary market rates. In contrast, in determining the estimated value of the securities, we value the debt component using a reference interest rate that generally tracks our secondary market rates. Because the reference interest rate is generally higher than the assumed funding rate, using the reference interest rate to value the debt component generally results in a lower estimated value for the debt component, which we believe more closely approximates a market valuation of the debt component than if we had used the assumed funding rate.

WFS calculated the estimated value of the derivative component based on a proprietary derivative-pricing model, which generated a theoretical price for the derivative instruments that constitute the derivative component based on various inputs, including the “derivative component factors” identified in “Risk Factors—The Value Of The Securities Prior

To Stated Maturity Will Be Affected By Numerous Factors, Some Of Which Are Related In Complex Ways.” These inputs may be market-observable or may be based on assumptions made by WFS in its discretion.

The estimated value of the securities determined by WFS is subject to important limitations. See “Risk Factors—The Estimated Value Of The Securities Is Determined By Our Affiliate’s Pricing Models, Which May Differ From Those Of Other Dealers” and “—Our Economic Interests And Those Of Any Dealer Participating In The Offering Are Potentially Adverse To Your Interests.”

Valuation of the securities after issuance

The estimated value of the securities is not an indication of the price, if any, at which WFS or any other person may be willing to buy the securities from you in the secondary market. The price, if any, at which WFS or any of its affiliates may purchase the securities in the secondary market will be based upon WFS’s proprietary pricing models and will fluctuate over the term of the securities due to changes in market conditions and other relevant factors. However, absent changes in these market conditions and other relevant factors, except as otherwise described in the following paragraph, any secondary market price will be lower than the estimated value on the pricing date because the secondary market price will be reduced by a bid-offer spread, which may vary depending on the aggregate face amount of the securities to be purchased in the secondary market transaction, and the expected cost of unwinding any related hedging transactions. Accordingly, unless market conditions and other relevant factors change significantly in your favor, any secondary market price for the securities is likely to be less than the original offering price.

If WFS or any of its affiliates makes a secondary market in the securities at any time up to the issue date or during the 4-month period following the issue date, the secondary market price offered by WFS or any of its affiliates will be increased by an amount reflecting a portion of the costs associated with selling, structuring, hedging and issuing the securities that are included in the original offering price. Because this portion of the costs is not fully deducted upon issuance, any secondary market price offered by WFS or any of its affiliates during this period will be higher than it would be if it were based solely on WFS’s proprietary pricing models less the bid-offer spread and

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500® Index, the Russell 2000® Index and the EURO STOXX 50® Index due August 29, 2022

hedging unwind costs described above. The amount of this increase in the secondary market price will decline steadily to zero over this 4-month period. If you hold the securities through an account at WFS or any of its affiliates, we expect that this increase will also be reflected in the value indicated for the securities on your brokerage account statement.

If WFS or any of its affiliates makes a secondary market in the securities, WFS expects to provide those secondary market prices to any unaffiliated broker-dealers through which the securities are held and to commercial pricing vendors. If you hold your securities through an account at a broker-dealer other than WFS or any of its affiliates, that broker-dealer may obtain market prices for the securities from WFS (directly or indirectly), but could also obtain such market prices from other sources, and may be willing to purchase the securities at any given time at a price that differs from the price at which WFS or any of its affiliates is willing to purchase the securities. As a result, if you hold your securities through an account at a broker-dealer other than WFS or any of its affiliates, the value of the securities on your brokerage account statement may be different than if you held your securities at WFS or any of its affiliates.

The securities will not be listed or displayed on any securities exchange or any automated quotation system. Although WFS and/or its affiliates may buy the securities from investors, they are not obligated to do so and are not required to make a market for the securities. There can be no assurance that a secondary market will develop.

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500® Index, the Russell 2000® Index and the EURO STOXX 50® Index due August 29, 2022
Investor Considerations

We have designed the securities for investors who:

seek an investment with contingent quarterly coupon payments at a rate of 6.00% per annum until the earlier of stated maturity or automatic call, if, **and only if**, the closing level of the lowest performing Index on the applicable quarterly calculation day is greater than or equal to 65% of its starting level;

understand that if the closing level of the lowest performing Index on the final calculation day has declined by more than 35% from its starting level, they will be fully exposed to the decline in the lowest performing Index from its starting level and will lose more than 35%, and possibly all, of the original offering price at stated maturity;

are willing to accept the risk that they may not receive any contingent coupon payment on one or more, or any, quarterly contingent coupon payment dates over the term of the securities and may lose all of the original offering price per security at maturity;

understand that the securities may be automatically called prior to stated maturity and that the term of the securities may be as short as approximately six months;

understand that the return on the securities will depend solely on the performance of the Index that is the lowest performing Index on each calculation day and that they will not benefit in any way from the performance of the better performing Indices;

understand that the securities are riskier than alternative investments linked to only one of the Indices or linked to a basket composed of each Index;

understand and are willing to accept the full downside risks of each Index;

are willing to forgo participation in any appreciation of any Index and dividends on securities included in the Indices; and

are willing to hold the securities to maturity.

The securities are not designed for, and may not be a suitable investment for, investors who:

seek a liquid investment or are unable or unwilling to hold the securities to maturity;

require full payment of the original offering price of the securities at stated maturity;

seek a security with a fixed term;

are unwilling to purchase securities with an estimated value as of the pricing date that is lower than the original offering price, as set forth on the cover page;

are unwilling to accept the risk that the closing level of the lowest performing Index on the final calculation day may decline by more than 35% from its starting level;

seek certainty of current income over the term of the securities;

seek exposure to the upside performance of any or each Index;

seek exposure to a basket composed of each Index or a similar investment in which the overall return is based on a blend of the performances of the Indices, rather than solely on the lowest performing Index;

are unwilling to accept the risk of exposure to the large- and small-capitalization segments of the United States equity market and the Eurozone equity market;

are unwilling to accept the credit risk of Wells Fargo; or

prefer the lower risk of conventional fixed income investments with comparable maturities issued by companies with comparable credit ratings.

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500® Index, the Russell 2000® Index and the EURO STOXX 50® Index due August 29, 2022

Determining Payment On A Contingent Coupon Payment Date and at Maturity

If the securities have not been previously automatically called, on each quarterly contingent coupon payment date, you will either receive a contingent coupon payment or you will not receive a contingent coupon payment, depending on the closing level of the lowest performing Index on the related quarterly calculation day.

Step 1: Determine which Index is the lowest performing Index on the relevant calculation day. The lowest performing Index on any calculation day is the Index with the lowest performance factor on that calculation day. The performance factor of an Index on a calculation day is its closing level on that calculation day as a percentage of its starting level (i.e., its closing level on that calculation day *divided by* its starting level).

Step 2: Determine whether a contingent coupon is paid on the applicable contingent coupon payment date based on the closing level of the lowest performing Index on the relevant calculation day, as follows:

On the stated maturity date, if the securities have not been automatically called prior to the stated maturity date, you will receive (in addition to the final contingent coupon payment, if any) a cash payment per security (the maturity payment amount) calculated as follows:

Step 1: Determine which Index is the lowest performing Index on the final calculation day. The lowest performing Index on the final calculation day is the Index with the lowest performance factor on the final calculation day. The performance factor of an Index on the final calculation day is its ending level as a percentage of its starting level (i.e., its ending level *divided by* its starting level).

Step 2: Calculate the maturity payment amount based on the ending level of the lowest performing Index, as follows:

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500® Index, the Russell 2000® Index and the EURO STOXX 50® Index due August 29, 2022

Hypothetical Payout Profile

The following profile illustrates the potential maturity payment amount on the securities (excluding the final contingent coupon payment, if any) for a range of hypothetical performances of the lowest performing Index on the final calculation day from its starting level to its ending level, assuming the securities have not been automatically called prior to the stated maturity date. This graph has been prepared for purposes of illustration only. Your actual return will depend on the actual ending level of the lowest performing Index on the final calculation day and whether you hold your securities to stated maturity. The performance of the better performing Indices is not relevant to your return on the securities.

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500® Index, the Russell 2000® Index and the EURO STOXX 50® Index due August 29, 2022

Risk Factors

The securities have complex features and investing in the securities will involve risks not associated with an investment in conventional debt securities. You should carefully consider the risk factors set forth below as well as the other information contained in this pricing supplement and the accompanying market measure supplement, prospectus supplement and prospectus, including the documents they incorporate by reference. As described in more detail below, the value of the securities may vary considerably before the stated maturity date due to events that are difficult to predict and are beyond our control. You should reach an investment decision only after you have carefully considered with your advisors the suitability of an investment in the securities in light of your particular circumstances.

If The Securities Are Not Automatically Called Prior to Stated Maturity, You May Lose Some Or All Of The Original Offering Price Of Your Securities At Stated Maturity.

We will not repay you a fixed amount on your securities at stated maturity. If the securities are not automatically called prior to stated maturity, you will receive a maturity payment amount that will be equal to or less than the original offering price per security, depending on the ending level of the lowest performing Index on the final calculation day.

If the ending level of the lowest performing Index on the final calculation day is less than its threshold level, the maturity payment amount will be reduced by an amount equal to the decline in the level of the lowest performing Index from its starting level (expressed as a percentage of its starting level). The threshold level for each Index is 65% of its starting level. For example, if the securities are not automatically called and the lowest performing Index on the final calculation day has declined by 35.1% from its starting level to its ending level, you will not receive any benefit of the contingent downside protection feature and you will lose 35.1% of the original offering price per security. As a result, you will not receive any protection if the level of the lowest performing Index on the final calculation day declines significantly and you may lose some, and possibly all, of the original offering price per security at stated maturity, even if the level of the lowest performing Index is greater than or equal to its starting level or its threshold level at certain times during the term of the securities.

Even if the ending level of the lowest performing Index on the final calculation day is greater than its threshold level, the maturity payment amount will not exceed the original offering price, and your yield on the securities, taking into account any contingent coupon payments you may have received during the term of the securities, may be less than the yield you would earn if you bought a traditional interest-bearing debt security of Wells Fargo or another issuer with a similar credit rating.

The Securities Do Not Provide For Fixed Payments Of Interest And You May Receive No Coupon Payments On One Or More Quarterly Contingent Coupon Payment Dates, Or Even Throughout The Entire Term Of The Securities.

On each quarterly contingent coupon payment date you will receive a contingent coupon payment if, **and only if**, the closing level of the lowest performing Index on the related calculation day is greater than or equal to its threshold level. If the closing level of the lowest performing Index on any calculation day is less than its threshold level, you will not receive any contingent coupon payment on the related contingent coupon payment date, and if the closing level of the lowest performing Index is less than its threshold level on each calculation day over the term of the securities, you will not receive any contingent coupon payments over the entire term of the securities.

The Securities Are Subject To The Full Risks Of Each Index And Will Be Negatively Affected If Any Index Performs Poorly, Even If The Other Indices Perform Favorably.

You are subject to the full risks of each Index. If any Index performs poorly, you will be negatively affected, even if the other Indices perform favorably. The securities are not linked to a basket composed of the Indices, where the better performance of some Indices could offset the poor performance of others. Instead, you are subject to the full risks of whichever Index is the lowest performing Index on each calculation day. As a result, the securities are riskier than an alternative investment linked to only one of the Indices or linked to a basket composed of each Index. You should not invest in the securities unless you understand and are willing to accept the full downside risks of each Index.

Your Return On The Securities Will Depend Solely On The Performance Of The Index That Is The Lowest Performing Index On Each Calculation Day, And You Will Not Benefit In Any Way From The Performance Of The Better Performing Indices.

Your return on the securities will depend solely on the performance of the Index that is the lowest performing Index on each calculation day. Although it is necessary for each Index to close above its respective threshold level on the relevant calculation day in order for you to receive a quarterly contingent coupon payment and for you to be repaid the original offering price of your securities at maturity, you will not benefit in any way from the performance of the better performing Indices. The securities may underperform an alternative investment linked to a basket composed of the Indices, since in such case the performance of the better performing Indices would be blended with the performance of the lowest performing Index, resulting in a better return than the return of the lowest performing Index alone.

You Will Be Subject To Risks Resulting From The Relationship Between The Indices.

It is preferable from your perspective for the Indices to be correlated with each other so that their levels will tend to increase or decrease at similar times and by similar magnitudes. By investing in the securities, you assume the risk that the Indices will not exhibit this relationship. The less correlated the Indices, the more likely it is that any one of the Indices will be performing poorly at any time over the term of the securities. All that is necessary for the securities to perform poorly is for one of the Indices to perform poorly; the performance of the better performing Indices is not relevant to your return on the securities. It is impossible to predict what the relationship between the Indices will be over the term of the securities. Each Index represents a different equity market. The S&P 500 Index represents the large capitalization segment of the United States equity market, the Russell 2000 Index represents the small capitalization segment of

PRS-12

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500® Index, the Russell 2000® Index and the EURO STOXX 50® Index due August 29, 2022

the United States equity market and the EURO STOXX 50 Index represents the Eurozone equity market. These different equity markets may not perform similarly over the term of the securities.

You May Be Fully Exposed To The Decline In The Lowest Performing Index On The Final Calculation Day From Its Starting Level, But Will Not Participate In Any Positive Performance Of Any Index.

Even though you will be fully exposed to a decline in the level of the lowest performing Index on the final calculation day if its ending level is below its threshold level, you will not participate in any increase in the level of any Index over the term of the securities. Your maximum possible return on the securities will be limited to the sum of the contingent coupon payments you receive, if any. Consequently, your return on the securities may be significantly less than the return you could achieve on an alternative investment that provides for participation in an increase in the level of any or each Index.

Higher Contingent Coupon Rates Are Associated With Greater Risk.

The securities offer contingent coupon payments at a higher rate, if paid, than the fixed rate we would pay on conventional debt securities of the same maturity. These higher potential contingent coupon payments are associated with greater levels of expected risk as of the pricing date as compared to conventional debt securities, including the risk that you may not receive a contingent coupon payment on one or more, or any, contingent coupon payment dates and the risk that you may lose a substantial portion, and possibly all, of the original offering price per security at maturity. The volatility of the Indices and the correlation among the Indices are important factors affecting this risk. Volatility is a measurement of the size and frequency of daily fluctuations in the level of an Index, typically observed over a specified period of time. Volatility can be measured in a variety of ways, including on a historical basis or on an expected basis as implied by option prices in the market. Correlation is a measurement of the extent to which the levels of the Indices tend to fluctuate at the same time, in the same direction and in similar magnitudes. Greater expected volatility of the Indices or lower expected correlation among the Indices as of the pricing date may result in a higher contingent coupon rate, but it also represents a greater expected likelihood as of the pricing date that the closing level of at least one Index will be less than its threshold level on one or more calculation days, such that you will not receive one or more, or any, contingent coupon payments during the term of the securities, and that the closing level of at least one Index will be less than its threshold level on the final calculation day such that you will lose a substantial portion, and possibly all, of the original offering price per security at maturity. In general, the higher the contingent coupon rate is relative to the fixed rate we would pay on conventional debt securities, the greater the expected risk that you will not receive one or more, or any, contingent coupon payments during the term of the securities and that you will lose a substantial portion, and possibly all, of the original offering price per security at maturity.

You Will Be Subject To Reinvestment Risk.

If your securities are automatically called, the term of the securities may be reduced to as short as approximately six months. There is no guarantee that you would be able to reinvest the proceeds from an investment in the securities at a comparable return for a similar level of risk in the event the securities are automatically called prior to maturity.

The Securities Are Subject To The Credit Risk Of Wells Fargo.

The securities are our obligations and are not, either directly or indirectly, an obligation of any third party. Any amounts payable under the securities are subject to our creditworthiness, and you will have no ability to pursue any securities included in any Index for payment. As a result, our actual and perceived creditworthiness may affect the

value of the securities and, in the event we were to default on our obligations, you may not receive any amounts owed to you under the terms of the securities.

Holders Of The Securities Have Limited Rights Of Acceleration.

Payment of principal on the securities may be accelerated only in the case of payment defaults that continue for a period of 30 days or certain events of bankruptcy or insolvency, whether voluntary or involuntary. If you purchase the securities, you will have no right to accelerate the payment of principal on the securities if we fail in the performance of any of our obligations under the securities, other than the obligations to pay principal and interest on the securities. See “Description of Notes—Events of Default and Covenant Breaches” in the accompanying prospectus supplement.

Holders Of The Securities Could Be At Greater Risk For Being Structurally Subordinated If We Convey, Transfer Or Lease All Or Substantially All Of Our Assets To One Or More Of Our Subsidiaries.

Under the indenture, we may convey, transfer or lease all or substantially all of our assets to one or more of our subsidiaries. In that event, third-party creditors of our subsidiaries would have additional assets from which to recover on their claims while holders of the securities would be structurally subordinated to creditors of our subsidiaries with respect to such assets. See “Description of Notes—Consolidation, Merger or Sale” in the accompanying prospectus supplement.

The Estimated Value Of The Securities On The Pricing Date, Based On WFS’s Proprietary Pricing Models, Is Less Than The Original Offering Price.

The original offering price of the securities includes certain costs that are borne by you. Because of these costs, the estimated value of the securities on the pricing date is less than the original offering price. The costs included in the original offering price relate to selling, structuring, hedging and issuing the securities, as well as to our funding considerations for debt of this type. The costs related to selling, structuring, hedging and issuing the securities include (i) the agent discount (if any), (ii) the projected profit that our hedge counterparty (which may be one of our affiliates) expects to realize for assuming risks inherent in hedging our obligations under the securities and (iii) hedging and other costs relating to the offering of the securities. Our funding considerations are reflected in the fact that we determine

PRS-13

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the S&P 500® Index, the Russell 2000® Index and the EURO STOXX 50® Index due August 29, 2022

the economic terms of the securities based on an assumed funding rate that is generally lower than our secondary market rates. If the costs relating to selling, structuring, hedging and issuing the securities were lower, or if the assumed funding rate we use to determine the economic terms of the securities were higher, the economic terms of the securities would be more favorable to you and the estimated value would be higher.

The Estimated Value Of The Securities Is Determined By Our Affiliate’s Pricing Models, Which May Differ From Those Of Other Dealers.

The estimated value of the securities was determined for us by WFS using its proprietary pricing models and related market inputs and assumptions referred to above under “Investment Description—Determining the estimated value.” Certain inputs to these models may be determined by WFS in its discretion. WFS’s views on these inputs may differ from other dealers’ views, and WFS’s estimated value of the securities may be higher, and perhaps materially higher, than the estimated value of the securities that would be determined by other dealers in the market. WFS’s models and its inputs and related assumptions may prove to be wrong and therefore not an accurate reflection of the value of the securities.

The Estimated Value Of The Securities Is Not An Indication Of The Price, If Any, At Which WFS Or Any Other Person May Be Willing To Buy The Securities From You In The Secondary Market.

The price, if any, at which WFS or any of its affiliates may purchase the securities in the secondary market will be based on WFS’s proprietary pricing models and will fluctuate over the term of the securities as a result of changes in the market and other factors described in the next risk factor. Any such secondary market price for the securities will also be reduced by a bid-offer spread, which may vary depending on the aggregate face amount of the securities to be purchased in the secondary market transaction, and the expected cost of unwinding any related hedging transactions. Unless the factors described in the next risk factor change significantly in your favor, any such secondary market price for the securities is likely to be less than the original offering price.

If WFS or any of its affiliates makes a secondary market in the securities at any time up to the issue date or during the 4-month period following the issue date, the secondary market price offered by WFS or any of its affiliates will be increased by an amount reflecting a portion of the costs associated with selling, structuring, hedging and issuing the securities that are included in the original offering price. Because this portion of the costs is not fully deducted upon issuance, any secondary market price offered by WFS or any of its affiliates during this period will be higher than it would be if it were based solely on WFS’s proprietary pricing models less the bid-offer spread and hedging unwind costs described above. The amount of this increase in the secondary market price will decline steadily to zero over this 4-month period. If you hold the securities through an account at WFS or any of its affiliates, we expect that this increase will also be reflected in the value indicated for the securities on your brokerage account statement. If you hold your securities through an account at a broker-dealer other than WFS or any of its affiliates, the value of the securities on your brokerage account statement may be different than if you held your securities at WFS or any of its affiliates, as discussed above under “Investment Description—Valuation of the securities after issuance.”

The Value Of The Securities Prior To Stated Maturity Will Be Affected By Numerous Factors, Some Of Which Are Related In Complex Ways.

The value of the securities prior to stated maturity will be affected by the then-current level of each Index, interest rates at that time and a number of other factors, some of which are interrelated in complex ways. The effect of any one factor may be offset or magnified by the effect of another factor. The following factors, which we refer to as the “derivative component factors,” are expected to affect the value of the securities. When we refer to the “value” of your

security, we mean the value you could receive for your security if you are able to sell it in the open market before the stated maturity date.

Performance of the Indices. The value of the securities prior to maturity will depend substantially on the then-current level of each Index. The price at which you may be able to sell the securities before stated maturity may be at a discount, which could be substantial, from their original offering price, if the level of the lowest performing Index at such time is less than, equal to or not sufficiently above its starting level or its threshold level.

Interest Rates. The value of the securities may be affected by changes in the interest rates in the U.S. markets.

Volatility Of The Indices. Volatility is the term used to describe the size and frequency of market fluctuations. The value of the securities may be affected if the volatility of the Indices changes.

Correlation Among The Indices. Correlation refers to the extent to which the levels of the Indices tend to fluctuate at the same time, in the same direction and in similar magnitudes. The correlation among the Indices may be positive, zero or negative. The value of the securities is likely to decrease if the correlation among the Indices decreases.

Time Remaining To Maturity. The value of the securities at any given time prior to maturity will likely be different from that which would be expected based on the then-current levels of the Indices. This difference will most likely reflect a discount due to expectations and uncertainty concerning the levels of the Indices during the period of time still remaining to the stated maturity date.

Dividend Yields On Securities Included In The Indices. The value of the securities may be affected by the dividend yields on securities included in the Indices.
