New RADVISION MEGACO/H.248 Developer Toolkit Provides Maximum Flexibility and Functionality for Development of IP Communication Applications

Monday April 11, 7:00 am ET

FAIR LAWN, N.J.--(BUSINESS WIRE)--April 11, 2005--RADVISION (Nasdaq:RVSN - News) today announced that it has released version 2.0 of its popular MEGACO/H.248 Developer Toolkit, featuring unique enhancements to support more encoding schemas, more operating systems, and the latest changes to the MEGACO and H.248 standards.

With the reemerging popularity of MEGACO/H.248 for controlling IP media sessions, carriers are now requesting MEGACO-powered solutions for virtually every operating system, based on either text or binary encoding. In fact, MEGACO/H.248 is specified as a core protocol by the 3G, IPPC (formerly the International Softswitch Consortium), and OMA Push-To-Talk standards bodies.

Responding to this growing popularity of the protocol and the diversity of solution requirements for operating systems and encoding approaches, RADVISION significantly enhanced version 2.0 of its MEGACO/H.248 Toolkit with new functionality and features, delivering a powerful tool for the development of communications solutions that can be easily modified to address the many variations in MEGACO-related product requirements.

"RADVISION's vision has long been to enable quicker time to market, with the most robust and feature rich solution," said Adi Paz, Senior Director of Marketing and Product Management for RADVISION's Technology Business Unit. "In this new version we not only accomplished this but we also implemented an architecture that allows our partners to quickly and easily add fully compliant support for text and/or binary encoding - enabling them to quickly and easily leverage new opportunities and markets."

In addition to supporting both text and binary encoding, the RADVISION MEGACO/H.248 Developer Toolkit fully supports the latest change to the IETF MEGACO standard - RFC 3525. This new RFC addresses much needed changes to clarify and solidify the MEGACO standard and represents over 200 changes to the MEGACO standard, covering everything from syntax to transport requirements.

The RADVISION MEGACO Toolkit supports an ever widening array of Operating Systems allowing applications to be moved seamlessly from one platform

Edgar Filing: RADVISION LTD - Form 6-K

architecture to another without modification. The RADVISION MEGACO/H.248 Toolkit supports development of applications on the Windows, Solaris, Linux, Tru64, VxWorks, Monta Vista, pSOS, OSE, Nucleus, QNX, and INTEGRITY operating systems. RADVISION's MEGACO/H.248 Toolkit architecture ensures that applications developed with this toolkit are fully insulated from the details of the underlying OS, allowing partners to later modify their applications to run on any of the above supported operating systems with only minimal effort. The agility with which applications can move from among the supported OS allows RADVISION customers the flexibility to address the many different markets and carrier operating system requirements with the same core application.

Availability

Version 2.0 of RADVISION's MEGACO/H.248 Toolkit is now available worldwide.

RADVISION Announces New IP Phone Developer Suite Functionality for the Creation of Advanced IP Communication Devices

Monday April 18, 7:00 am ET

Edgar Filing: RADVISION LTD - Form 6-K

FAIR LAWN, N.J.--(BUSINESS WIRE)--April 18, 2005--RADVISION (Nasdaq:RVSN - News) today announced new functionality for its IP Phone Developer Suite v1.4, an award-winning developer platform for chipset vendors and IP phone manufacturers to build advanced IP phone solutions. With today's announcement RADVISION has enhanced its already powerful IP Phone developer platform with features and functionality ideal for the development of wireline, WiFi and cellular IP telephony systems.

In addition to new features specifically required for advanced IP telephony functionality, such as NAT traversal and Dynamic Code change, the IP Phone Developer Suite v1.4 also includes add-on features such TLS security for SIP and H.235 security for H.323.

RADVISION's IP Phone Developer Suite is available in multiple VoIP protocols including SIP and H.323. It provides a rich set of features and services for Client Customer Premises Equipment (CPE) and WiFi/mobile handset manufacturers to implement fully functional IP phone applications with minimal effort. In addition to basic phone support, the RADVISION IP Phone Developer Suite supports advanced IP phone services such as three way conferencing, call transfer, encryption, blind transfer, call waiting, call hold, caller ID, handset/handsfree, and DTMF Relay.

"We have seen tremendous traction for our IP phone and we now expand on this award-winning product with new developer features and functionality uniquely suited for the needs of the wireline and wireless IP communications markets," said Boaz Raviv, acting General Manager of RADVISION's Technology Business Unit. "RADVISION's new IP Phone Developer Suite meets the stringent technical demands of delivering advanced IP telephony features in a solution that supports a wide range of chipsets, media processing, and hardware implementations."

RADVISION has designed its IP Phone Developer Suite to be easily portable across a variety of IP Phone chipsets. Additionally, RADVISION has worked closely with leading silicon vendors to help provide pre-integrated solutions for their chipset services. A complete IP phone solution is achieved by integrating the RADVISION IP Phone Developer Suite v1.4 with DSP services (voice compression/decompression, echo cancellation, VAD, etc.) and telephony hardware services (hook state, key state, handset, etc.), both of which would be provided by the developer or a third-party.

Specific functionality that has been added with v1.4 of the IP Phone Developer Suite includes:

- o STUN & NAT Traversal - A new optional module enables the IP Phone Developer Suite to support NAT (Network Address Translation) traversal by enabling the IP phone to modify IP addresses and ports via a callback function (RFC3489).
- o TLS Security - A new optional module enables the IP Phone to support TLS as specified in SIP standards.
- o H.235 Security - A new optional module enables the IP Phone to support ITU-T Recommendation H.235 Annex D - Baseline Security Profile.
- o Dynamic Codec Change - Allows the device to dynamically change media parameters such as codecs during a call by sending Re-Invite messages

Edgar Filing: RADVISION LTD - Form 6-K

as specified in RFC3264 (Offer/Answer Model).

- o PROTOS Vulnerability Tests - version 1.4 is PROTOS-compliant in both SIP and H.323.
- o Auto Discovery - An IP Phone developed with the RADVISION IP Phone Developer Suite can automatically detect and register to gatekeepers in the network through Multicast GRQ messages.
- o Up to Three E164 Numbers per Device - The IP Phone and every analog line in the IAD can now be configured with three E164 numbers, enabling the development of multi-line IP Phones.
- o Transfer with Replaces - SIP Transfer now conforms to RFC 3891 (SIP "Replaces" Header) and draft-ietf-sipping-cc-transfer-03.
- o Blind Transfer - Enables user to transfer a call to a third party.
- o CLIP and CLIR (Caller ID Restriction/Presentation) - Users can configure whether or not their number and presentation name will be restricted.
- o H.323 Extension Callbacks - Various application callbacks have been added to provide additional control of H.323 Stack events.

Availability

Version 1.4 of the RADVISION IP Phone Developer Suite is currently generally available worldwide.

RADVISION First Quarter 2005 Results Exceed Forecast

Wednesday April 20, 7:00 am ET

FAIR LAWN, N.J.--(BUSINESS WIRE)--April 20, 2005--RADVISION (Nasdaq: RVSN - News) today announced that revenues for the first quarter of 2005 were \$16.3 million, representing a 14% increase from the first quarter of 2004. Net income for the 2005 first quarter was \$2.5 million or \$0.11 per diluted share compared with \$719,000 or \$0.03 per diluted share reported in the 2004 first quarter.

Operating income for the first quarter of 2005 increased to \$1.9 million from \$307,000 in the 2004 first quarter.

The results for the first quarter of 2005 exceeded the Company's forecast of revenues of \$16.0 million, operating income of \$300,000 and net income of \$800,000 or \$0.04 per diluted share. The 2005 first quarter benefited from a higher margin sales mix and lower than forecasted operating expenses.

First quarter 2005 revenues consisted of \$10.7 million in Networking Business Unit (NBU) sales and \$5.6 million in Technology Business Unit (TBU) sales, representing increases of 5% and 36%, respectively, over the first quarter of 2004.

The Company ended the first quarter of 2005 with approximately \$107.3 million in cash and liquid investments, a decrease of \$3.1 million over the prior quarter, and equivalent to \$5.18 per basic share. The decrease reflects operating cash flow of \$1.8 million and income of \$2.8 million from the exercise of options, offset by \$600,000 in capital expenditures and \$7.1 million related to the purchase of the assets of First Virtual Communications, mainly its Click to Meet(TM) technology.

Gadi Tamari, Chief Executive Officer, commented: "We continued to execute in the First Quarter of 2005, which gave us a good start to the year. We made important strategic progress with the acquisition of Click to Meet(TM), which adds a software-based desktop solution that we are working to integrate with our networking hardware for multi-media communications on the desktop. We also added a large base of active Click to Meet(TM) customers and a good team to support them. We introduced several new desktop and 3G solutions in the quarter as well."

Mr. Tamari continued: "Our TBU has had strong growth for several quarters and that was the case in the first quarter as well. The TBU benefited from continued growth in the sales of SIP licenses as well as a large and important deal with a vendor of enterprise applications which is integrating IP voice into their existing platform using our SIP and IP toolkits."

"Our NBU sales increased 5% over last year. Our room conferencing sales remained solid and were accompanied by strong 3G sales in Asia Pacific and EMEA, including a new deployment and an important deal with a strategic partner. We

Edgar Filing: RADVISION LTD - Form 6-K

also had a new Microsoft-related desktop deployment."

Mr. Tamari concluded: "We expect to make additional progress in the second quarter and feel good about the year. We are executing on what we said and see further evidence that the visual communication market is taking hold."

Guidance

The following statements are forward-looking, and actual results may differ materially.

The Company expects second quarter 2005 revenues to be approximately \$18.0 million and net income to approximate \$2.7 million or \$0.12 per diluted share. This compares to second quarter 2004 revenues of \$15.7 million and net income of \$1.1 million or \$0.05 per diluted share. (Full details are available on the Company's web site at www.radvision.com.)

First Quarter 2005 Earnings Conference Call/Webcast

RADVISION will hold a conference call to discuss its first quarter 2005 results and second quarter outlook, today, Wednesday, April 20, 2005 at 9:00 a.m. (Eastern). To access the conference call, please dial 1-888-455-9744 (International dialers can call +1-210-234-0002) by 8:45 a.m. The passcode "RADVISION" will be required to access the live conference call. A live webcast of the conference call will also be available in the investor relations section of the company's website at www.radvision.com.

A PowerPoint presentation highlighting key financial metrics as well as the second quarter 2005 estimate will be available in the Investor Relations section of the company's website, www.radvision.com. The presentation will be available beginning at 8:00 a.m. (Eastern) on April 20th and will be archived on the website until the end of the second quarter. A replay of the call will be available beginning approximately one hour after the conclusion of the call through 11:00 p.m. (Eastern) on April 27th. To access the replay, please dial 1-866-393-2012 (International dialers can call +1-203-369-0457).

About RADVISION

RADVISION Ltd. (Nasdaq: RVSN - News) is the industry's leading provider of high quality, scalable and easy-to-use products and technologies for videoconferencing, video telephony, and the development of converged voice, video and data over IP and 3G networks. RADVISION has two distinct business units. RADVISION's Networking Business Unit (NBU) offers one of the broadest and most complete sets of videoconferencing network solutions for IP- and ISDN-based networks, supporting all end points in the industry. The company also provides businesses and service providers with integrated solutions that deliver converged IP-based video telephony applications to employee computer desktops and residential broadband homes worldwide. The Company's Technology Business Unit (TBU) provides protocol development tools and platforms, enabling equipment vendors and service providers to develop and deploy new converged networks, services, and technologies. For more information please visit our website at www.radvision.com.
