ITEM 8.01. OTHER EVENTS.

On March 12, 2007, the Company issued a press release announcing that its wholly owned subsidiary Enzo Therapeutics, Inc., has treated the first patient in a Phase I/II clinical trial of the company's gene therapy for HIV-1 (Human Immunodeficiency Virus-Type 1) infection. The study, being conducted at the Medical School of the University of California San Francisco (UCSF), intends to enroll HIV-1 infected subjects with compromised CD4+ cell counts, to determine whether the procedure will create enough HIV-1 resistant CD4+ cells to defer disease progression to AIDS (Acquired Immune Deficiency Syndrome). Enrollment is continuing under a modified protocol designed to increase the proportion of engineered stem cells engrafted in the patient's bone marrow. The press release issued by the Company announcing the foregoing is included as Exhibit 99.2 to this Current Report on Form 8-K and is incorporated by reference in its entirety into this Item 8.01.
