1. MAIN MILESTONES AND ECONOMIC MAGNITUDES OF THE SECOND QUARTER 2011

Operating earnings was ARS 1,717M in the second quarter 2011, 31.9% lower than same period in 2010.

A decline in exploration and production activities due to union conflicts in the provinces of Santa Cruz and Chubut during the quarter resulted in a lower availability of crude oil in the Argentine market.

The impact that strikes had on our production caused both higher volume purchases of crude oil and a 4.9% decrease in crude oil processed in our refineries. Within this context and with the purpose of maintaining our sales volume, purchases of refined products from third parties were increased. Consequently total purchases from third parties in the quarter rose by 87.4% compared to second quarter in 2010, to reach ARS 4,676M.

Operating costs posted in the second quarter 2011 were 30% higher than the same period in 2010, mainly due to higher costs related to payroll, operation services and transport and freights

Operating revenues in the second quarter 2011 reached ARS 13,614M, 28.8% higher than the same period last year. Higher sales of oil and chemical products were generated by a greater sales volume in the domestic market and a price recovery in the local market as well as a price rise in international markets.

Consequently, higher operating revenues posted in the second quarter compared to same period in 2010 were outstripped by larger purchases of crude oil and products as well as higher operating costs.

Net income for the period was ARS 980M, 39% lower than the same period in 2010.

Total investment in the quarter reached ARS 2,857M outpacing that in the 2Q 2010 by 51.2%. Said increase was driven by a boost in upstream activity and the progress in downstream projects.

Consolidated Results Q2 2011

* Source: Reuters

(1) controlled companies included

Operating earnings rose to ARS 871M, 46% lower compared to the second quarter last year.

The lower performance in the period was mainly as a consequence of strikes in the provinces of Santa Cruz and Chubut. Total hydrocarbons production in the second quarter of the current year was 439.5 Kboed compared to 547.1 Kboed in the same period of previous year, 19.7% below. Likewise, negative results from exploration during the period, mainly offshore drilling at Malvinas basin, raised charges on exploration cost by ARS 202M, compared to second quarter 2010.

In international markets, the average WTI indicator for the period was 102.3 USD/bbl, 31% over the average for the second quarter of 2010. In this context the price of crude oil in the local market improved by 17.1% up to 56.8 USD/bbl. As to natural gas, average sale price was 1.96 USD/Mmbtu, 7.1% over that of the second quarter in 2010, mainly due to better sale price in the industrial sector and power plants.

Consolidated Results Q2 2011

Crude oil production in the second quarter this year was 183.9 kbbl/d, 25.9% below the same period of previous year due to union conflicts throughout the whole quarter, which prevented workers from reaching their working places to carry out normal operating activities to maintain production levels and continue the developing our fields. The effect of such outage was a lower liquids and gas production of around 6.6 million boe. On the other hand, the incentives on production stemming from the Program “Petróleo Plus” were not booked, although they were offset by the incentive related to the addition of reserves as of 2010 year-end and taking into account the final reporting, concluded during this quarter. As to the production of natural gas and LNG in the second quarter, it was 33.6 Mm³/d and 44.1 Kbbld respectively, 15.6% and 8.9% below reported amounts in the same period of 2010 due to natural depletion of reserves as well as the union conflicts above mentioned.

Cumulative results

Operating income in the first half was ARS 2,853M, 18% below that in the first half of 2010. This drop is the result of a fall in production (-11.8%) due to strikes, higher operating costs and heavier exploration expenses. Higher income from price recovery in crude oil and natural gas has not offset the drawbacks abovementioned.

Investment

Investment in exploration and production reached ARS 2,061M in the second quarter of 2011, outpacing that in the same period of 2010 by 40.6%. The increase was driven by stronger development activity at El Medanita, Aguada Toledo-Sierra Barrosa and Manantiales Behr fields as well as in exploration on non-conventional oil from the Vaca Muerta formation in the Neuquina basin. Also, the conclusion of the LNG port at Escobar implied an investment of over ARS 80M during the quarter.

During the first half of 2011 investment rose to ARS 3,559M, 36.3% above that in the first half of 2010, basically on account of greater activity in the Neuquina basin and the construction of the LNG port at Escobar, which reached a total investment of approximately ARS 280M.

Consolidated Results Q2 2011

2.2 DOWNSTREAM (1)

Q2 2010	Q1 2011	Q2 2011	Var.% Q211/Q210		Jan-Jun 2010	Jan-Jun 2011	Var.% 2011/2010

396	378	753	90.2%	Investments (MARS)	634	1,131	78.4%

(1) controlled companies included

Operating earnings in downstream rose to ARS 1,186M in the second quarter of 2011, standing at similar levels to the ones reported in the second quarter of 2010.

The operating result of the quarter was negatively affected by higher prices in crude oil purchases, greater volumes and higher prices in biofuel purchases, heavier operating costs and greater volumes and higher prices in purchases of petroleum products, mainly diesel imports. These negative factors have offset stronger revenues coming from the price adjustment in the domestic market, higher prices in products related to international rates, sold in the local market and higher exports.

The volume of crude oil processed in the quarter was 279 Kboed, 4.9% lower than that in the second quarter of 2010 mainly due to a lower availability of crude oil.

Likewise, sales volume of petroleum products in the domestic market was 3.7% higher as a result of an increase in gasoline and diesel volumes, while exports fell by 8.5%, mainly those corresponding to fuel oil and other chemical products.

Also, sales of chemical products rose 94.5% in the domestic market compared to the same period in the previous year, basically in the fertilizers segment, both from YPF and Profertil. Such sales increase was due to the higher expectation of the Argentine agro-business sector for the year 2011, which contributed to offset the higher costs and expenditures

already mentioned.

6

Consolidated Results Q2 2011

The result of the quarter from controlled companies within downstream, including OPESSA, Refinor, YPF Brasil Comercializadora and Profertil, rose to ARS 203M, posting a 43.4% rise compared to previous year, which was mainly driven by results from Profertil and Refinor.

Cumulative results

Cumulative results as of June 2011 reached ARS 2,317M, 0.5% above the first half of 2010. Higher operating income has been almost fully offset by heavier operating costs and greater purchases of crude oil, biofuels and petroleum products.

Investment

Investment in downstream during the quarter was ARS 753 M, 90.2% above that in the second quarter of 2010. Such increase was grounded on the advances in the CCR project, which will increase production capacity for gasoline at our chemical complex in Ensenada and the advances in the desulphurization project at Lujan de Cuyo and La Plata refineries intended to improve the quality of refined products.

Additionally, accumulated investment as of June 2011 was ARS 1,131M, outstripping that for the same period in 2010 by 78.4%, mainly as consequence of the progress shown in the projects abovementioned.

2.3 CORPORATE

This business segment involves mainly running costs and other activities that are not reported against the business units.

Corporate costs net of the second quarter rose to ARS 340M, above the level reported in the same period of 2010 by ARS 74M.

Consolidated Results Q2 2011

3. HIGHLIGHTS OF THE QUARTER

On April 26, 2011 the Company Board of Directors decided a dividend cash payment of seven pesos (AR\$7) per share.

On May 10, 2011 YPF reported new findings of non-conventional oil resources coming from shale (shale oil) in the Neuquina basin. 6 vertical exploratory wells were drilled to appraise an area of 330 km² over the Vaca Muerta formation, in Loma La Lata, Neuquén province, which results revealed initial flows ranging from 200 to 560 barrels of oil equivalent per day (bpe/d) in the first 30 days of production, which together with the seismic and geological studies performed, helped to estimate technically recoverable resources in this area of 150 million of barrels of oil equivalent*. These resources do not constitute proved reserves to date and they will be recognized as such when they comply with formal criteria requested by the National Securities Commission (“Comisión Nacional de Valores”) and the Securities and Exchange Commission. Also, it was informed that 17 new wells are expected to be drilled and 14 existing wells are expected to be fractured in the area of Loma La Lata in the remaining part of the year, which implies an estimated total investment of U\$S 270M out of which U\$S 100M have already been invested .

On May 24, 2011 Petersen Energía Inversora S.A notified YPF S.A. that as from May 19, 2011, it had acquired 39,331,279 shares representing a 10% capital stock of YPF S:A, for which it had exercised the second call option as it has already been disclosed to the market on May 4, 2011.

On June 16, 2011 YPF issued the Negotiable Obligations Class V under the Medium Term Note Program for U\$S1,000 million, with a face value of AR\$300,000,000, floating interest rate and a maturity in 2012.

On July 4, 2011 the Executive Power of the province of Mendoza approved by Decree No 1465/11 the Memorandum of Agreement signed by and between YPF and said province in April intended to extend the original term of the Exploration and Transport Concessions in the province territory for a 10 year-term, starting from the expiration of its original grant term in 2017, to the new term becoming due in 2027. The concessions involved jointly accounted for approximately 9% of total proved reserves of YPF as of December 31, 2010.

On July 12 the shareholder Repsol YPF S.A. informed the sale of 1,985,823 ordinary shares class “D” representing 0.50% of capital stock and votes of YPF S.A. for a price of ARS 177 per share according to the procedures set up by Resolution No 3338, effective October 17, 1996 and supplementary from Buenos Aires Stock Market S.A. regarding block sale operations.

On July 13, 2011 YPF reported new preliminary results obtained from an exploratory well on the Vaca Muerta formation in the Block Bajada de Añelo, at Neuquina basin. The exploratory well Bajada de Añelo X-2 (BA X-2) was drilled through a Joint Venture in which YPF holds a 70% stake, together with Rovella Energía S.A. (15%) and G&P del Neuquén (15%). The aim of drilling this well was to continue collecting data and behavior patterns on the Vaca Muerta formation out of the Loma La Lata area. The well features a drilling of 3000 meters deep, in which 3 fractures were performed in 150 meters. The results from this well reveal an approximate average high quality (48° API) daily

* Until further work is completed, there remains significant risk that these discoveries will not lead to material proved reserves.

Consolidated Results Q2 2011

production of 250 barrels of oil per day, in line with the results previously obtained on the formation abovementioned in the of Loma La Lata area.

Consolidated Results Q2 2011

This document contains statements that YPF believes constitute forward-looking statements within the meaning of the US Private Securities Litigation Reform Act of 1995. These forward-looking statements may include statements regarding the intent, belief, plans, current expectations or objectives of YPF and its management, including statements with respect to YPF's future financial condition, financial, operating, reserve replacement and other ratios, results of operations, business strategy, geographic concentration, business concentration, production and marketed volumes and reserves, as well as YPF's plans, expectations or objectives with respect to future capital expenditures, investments, expansion and other projects, exploration activities, ownership interests, divestments, cost savings and dividend payout policies. These forward-looking statements may also include assumptions regarding future economic and other conditions, such as future crude oil and other prices, refining and marketing margins and Exchange rates. These statements are not guarantees of future performance, prices, margins, exchange rates or other events and are subject to material risks, uncertainties, changes and other factors which may be beyond YPF's control or may be difficult to predict. YPF's actual future financial condition, financial, operating, reserve replacement and other ratios, results of operations, business strategy, geographic concentration, business concentration, production and marketed volumes, reserves, capital expenditures, investments, expansion and other projects, exploration activities, ownership interests, divestments, cost savings and dividend payout policies, as well as actual future economic and other conditions, such as future crude oil and other prices, refining margins and exchange rates, could differ materially from those expressed or implied in any such forward-looking statements. Important factors that could cause such differences include, but are not limited to, oil, gas and other Price fluctuations, supply and demand levels, currency fluctuations, exploration, drilling and production results, changes in reserves estimates, success in partnering with third parties, loss of market share, industry competition, environmental risks, physical risks, the risks of doing business in developing countries, legislative, tax, legal and regulatory developments, economic and financial market conditions in various countries and regions, political risks, wars and acts of terrorism, natural disasters, project delays or advancements and lack of approvals, as well as those factors described in the filings made by YPF and its affiliates with the Securities and Exchange Commission, in particular, those described in "Item 3. Key Information—Risk Factors" and "Item 5. Operating and Financial Review and Prospects" in YPF's Annual Report on Form 20-F for the fiscal year ended December 31, 2010 filed with the US Securities and Exchange Commission. In light of the foregoing, the forward-looking statements included in this document may not occur. YPF does not undertake to publicly update or revise these forward-looking statements even if experience or future changes make it clear that the projected performance, conditions or events expressed or implied therein will not be realized.

These materials do not constitute an offer for sale of YPF S.A. bonds, shares or ADRs in the United States or otherwise.

The information contained herein has been prepared to assist interested parties in making their own evaluations of YPF.
